PREFACE

This report was prepared by SCS Consulting Engineers, Inc., Long Beach, California 90807. This Hazardous Waste inventory and Disposal Assessment was initiated by the Air Force to meet the requirements of the Resource Conservation and Recovery act of 1976 as amended in 40 CFR 261 & 264 May 19, 1980, and the California Administrative Code, title 22 Division 4. The report will be used as a reference document to the 1978 Space Shuttle Supplement 1. It will also be used for hazardous waste reporting to EPA/California, for hazardous waste management planning, and for engineering design concepts for the STS.

The report is in three volumes. Volume I is an inventory of hazardous wastes likely to be generated by the West Coast STS project. Volume II is an analysis of recycle, treatment, and disposal options for managing the projected STS Wastes. Volume III is an appendix with reference material for Volume II.

This work was accomplished between September 1980 and June 1981. Mr. John R. Edwards, Headquarters Space Division was the Project Officer.

This report has been reviewed by the office of Public Affairs (PA) and is releasable to the National Technical Information Service (NTIS). At the NTIS it will be available to the general public, including foreign nations.

This report has been reviewed and is approved for publication.

JOHN R. EDWARDS
Environmental Protection Scientist

R.C. WOOTEN JR, Lt/Col, USAF, BSC
STS Environmental Program Manager

RAPHAEL O. ROIG
Chief, Environmental Planning Division

JOHN D. PEARMAN, Colonel, USAF
Directorate of Civil Engineering

REPORT DOCUMENTATION PAGE		READ INSTRUCTIONS BEFORE COMPLETING FORM
1. REPORT NUMBER SD-TR-81-32	2. GOVT ACCESSION NO.	3. RECIPIENT'S CATALOG NUMBER
4. TITLE (and Subtitle) HAZARDOUS WASTE INVENTORY AND DISPOSAL ASSESS- MENT FOR THE SPACE SHUTTLE PROJECT, Volume III. Appendices.		5. TYPE OF REPORT & PERIOD COVERED Final Report for Period 12 Nov. 1980-24 July 1981
7. AUTHOR(s)		6. PERFORMING ORG. REPORT NUMBER 18017
9. PERFORMING ORGANIZATION NAME AND ADDRESS SCS Engineers 4014 Long Beach Boulevard Long Beach, California 90807		8. CONTRACT OR GRANT NUMBER(s) F04 701-80-C-0106
11. CONTROLLING OFFICE NAME AND ADDRESS SD/DEV Los Angeles AFS, P.O. Box 92960 WWPC Los Angeles, California 90009		10. PROGRAM ELEMENT, PROJECT, TASK AREA & WORK UNIT NUMBERS 64411F
14. MONITORING AGENCY NAME & ADDRESS (if different from Controlling Office)		12. REPORT DATE July 24, 1981
		13. NUMBER OF PAGES
		15. SECURITY CLASS. (of this report) Unclassified
		15a. DECLASSIFICATION/DOWNGRADING SCHEDULE
16. DISTRIBUTION STATEMENT (of this Report) Approved for public release; distribution unlimited.		
17. DISTRIBUTION STATEMENT (of the abstract entered in Block 20, if different from Report)		
18. SUPPLEMENTARY NOTES Available in DTIC		
19. KEY WORDS (Continue on reverse side if necessary and identify by block number) Civil Engineering Space Shuttle Environmental Planning Hazardous Waste Vandenberg Air Force Base		
20. ABSTRACT (Continue on reverse side if necessary and identify by block number) Volume III contains the appendices cited in Volume II of this report. Appendix A presents the STS inventory in Tables grouping the wastes according to treatment categories and geographical locations. Appendices B, C, and G document California regulations concerning hazardous waste, while Appendix D lists the hazardous waste haulers registered in California. Appendices E, F, and H describe California's programs and permitting procedures for handling hazardous waste, and Appendix I outlines the major elements of an environmental		

impact statement/report. Appendix J documents the present factors and costs used by the City of Oxnard to determine the rates charged for discharging to the POTW.

TABLE OF CONTENTS

<u>Appendix</u>	<u>Page</u>
A Data Base for Hazardous Waste Management Analysis: Grouping of STS-VAFB Wastes by Treatment Categories and Geographical Locations.....	A-1
B Recyclable Hazardous Wastes: California Administrative Code, Title 22, Division 4, Chapter 30, Article 12.....	B-1
C State of California Regulations Governing Land Disposal of Hazardous Wastes.....	C-1
D List of Hazardous Waste Haulers Registered with California Department of Health Services, Hazardous Materials Management Section, May 1, 1980.....	D-1
E Application for Operating Permit for Facilities Receiving Hazardous Waste.....	E-1
F Instructions for Preparing an Operation Plan for a Hazardous Waste Facility.....	F-1
G Regulations Concerning Identification, Packaging, and Shipment of Hazardous Waste; Excerpts from CFR-Title 49, Transportation Parts 171, 172, 173, and 178.....	G-1
H California Hazardous Waste Management Program.....	H-1
I Major Elements of an Environmental Impact Statement/Report.....	I-1
J City of Oxnard Resolutions for Calculating Wastewater Charges.....	J-1

1. Station Set Zero is used for wastes which are generated from space shuttle operations at a place other than a designated station set.
2. Primol 355 is a high-viscosity mineral oil. Its use requires a design decision and Air Force approval. This or another oil or a foam will be used to prevent vaporization of hypergols.
3. Insulation is mixed, but not used.
4. Insulation is unmixed, but is disposed of because shelf life was exceeded.
5. Nature of contaminants is not known.
6. Treatment Category 26 is used for those wastes whose nature is unknown.
7. Contains unidentified surfactants and/or detergents.
8. Contains Freon TMC, trichloroethane, methyl ethyl ketone, and cellosolve.

	SOUTH VANDENBERG <SS 23,31,33,99>					
	PORT HUENEME <SS 32>					
	TOTAL					

1. Metric volume is given in liters for both solids and liquids. To convert the volume of a solid to cubic meters, divide liters by 1,000.
2. Station Set Zero is used for wastes which are generated from space shuttle operations at a place other than a designated station set.
3. This assumes that cleaning the spacesuits will require approximately 2 gal (7.6 l) of freon per spacesuit.
4. Primol 355 is a high-viscosity mineral oil. Its use requires a design decision and Air Force approval. This or another oil or a foam will be used to prevent vaporization of hypergols.
5. Operation generating the waste occurs once every five launches. The amount per launch represents one-fifth of the total amount of waste generated per operation.
6. This assumes a density of 0.8 g/ml (6.7 lb/gal).
7. This assumes the density of water (1.0 g/ml, or 8.3 lb/gal).
8. This assumes a density of 1.4 g/ml (11.7 lb/gal).
9. Insulation is unmixed, but is disposed of because shelf life was exceeded.
10. This assumes that 10 percent of total amount used becomes waste.
11. Nature of contaminants is not known.
12. Contains unidentified surfactants and/or detergents.
13. This assumes scrubber is 90 percent efficient.
14. Contaminated rags are assumed to weigh 5 lb/ft³ (0.08 g/cc).
15. Density is assumed to be 5 lb/ft³ (0.08 g/cc).
16. Paint brushes are assumed to weigh 8 lb/ft³ (0.13 g/cc).
17. This assumes a density of 0.12 g/ml (1.0 lb/gal).
18. Filters are assumed to weigh 1 lb/ft³ (0.016 g/cc).
19. Containers and packing materials are assumed to weigh 0.33 lb/ft³ (0.005 g/cc).
20. Insulation is mixed, but not used.
21. Volume based on number of 55-gal drums used.

22. Quantities ignore loss of material due to burnoff on reentry.
23. This assumes a density of 2 lb/ft^3 (0.03 g/cc).
24. This assumes a density of 2.8 lb/ft^3 (0.045 g/cc).
25. Large paint cans are assumed to weigh 1 lb per empty gallon can (7.5 lb/ft^3 , or 0.12 g/cc).
26. Spray cans and small paint cans are assumed to weigh 6 lb/ft^3 of empty cans (0.10 g/cc).
27. Cups and wood sticks are assumed to weigh 3 lb/ft^3 (0.05 g/cc).
28. Contaminated cloths, clothes, and debris are assumed to weigh 2 lb/ft^3 (0.03 g/cc).
29. Contains Freon TMC, trichloroethane, methyl ethyl ketone, and cellosolve.
30. Baseline amounts assume that each spacesuit at a given station set is prerinsed with 40 gal (150 l) of EEWS water once every launch cycle.
31. Treatment Category 26 contains those wastes whose nature is not known.

1. Metric volume is given in liters for both solids and liquids. To convert the volume of a solid to cubic meters, divide liters by 1,000.
2. Station Set Zero is used for wastes which are generated from space shuttle operations at a place other than a designated station set.
3. Primol 355 is a high-viscosity mineral oil. Its use requires a design decision and Air Force approval. This or another oil or a foam will be used to prevent vaporization of hypergols.
4. Contingency is a once-around abort.
5. Contingency is an acquisition screen test.
6. Contingency is a before-launch abort.
7. Contingency results from emptying seawater out of a retrieved SRB when it is too heavy to lift out of the water.
8. Contingency is the spill of one payload bay kit.
9. Contingency represents one SRB splitting open and spilling its contents. Should this unlikely event occur, it is suspected that propellant will ignite and burn up.
10. Contingency represents one SRB splitting open after recovery.
11. Treatment Category 26 is used for those wastes whose nature is unknown.

CATEGORY CODES

AL	Alkaline cleaning solutions
AW	Adhesive wastes, nonaqueous

APPENDIX B

RECYCLABLE HAZARDOUS WASTES: CALIFORNIA ADMINISTRATIVE
CODE, TITLE 22, DIVISION 4, CHAPTER 30, ARTICLE 12

APPENDIX B

RECYCLABLE HAZARDOUS WASTES: CALIFORNIA ADMINISTRATIVE CODE, TITLE 22, DIVISION 4, CHAPTER 30, ARTICLE 12

66763. RECYCLABLE HAZARDOUS WASTE DISPOSAL STATEMENT

(a) Within 180 days of the disposal of a recyclable hazardous waste of a type listed in Section 66796, the (State Health) Department may request the producer of such waste to provide the Department with a written statement justifying having not recycled the waste. A person requested to provide such a statement shall comply within 30 days of the Department's written request. If the request is made of an entity specified in Section 66160 other than an individual, the statement shall be issued by the responsible management of that entity.

(b) The Department's request for a statement from the waste producer pursuant to subsection (a) above shall cite a special property or component of the waste and a possible use or method of reclamation on the basis of which the Department considers that the waste might feasibly be recycled.

(c) The statement from the waste producer justifying having not recycled a hazardous waste pursuant to subsection (a) above shall include, but need not be limited to, the following:

(1) The general description, source, chemical composition, physical state, and amount of the waste.

(2) The amount of similar waste discarded or recycled during the 365-day period preceding the disposal in question.

(3) An estimate of the amount of similar waste to be generated by the producer in the 365-day period succeeding the disposal in question.

(4) A summary of efforts made to find a use for the waste such as the following:

(A) Use without processing.

(B) Use after processing to remove or modify undesired impurities.

(C) Use as a source of energy by the producer or by another person.

(5) Technologic, economic or other reason for not recycling the waste, taking into account relevant factors which may include any of the following:

(A) The available amount and the storability of the waste.

(B) Chemical, physical, toxicological or other properties of the waste which might affect its recyclability.

(C) The concentration or recoverability of the chemical component, chemical reactivity, fuel value or other attribute cited by the Department pursuant to subsection (b) above which may determine the feasibility of recycling the waste.

(D) The processing required in recycling the waste and the availability and cost of suitable processing technology and facilities.

(E) The marketability of the waste as such or as its reclaimed components in terms of the distance from the waste

source to the point of use or reclamation, the costs of handling and transport, and the current market prices for the individual waste components as pure or technical grade materials.

(d) The statement shall indicate what information contained therein is considered to be a trade secret. The Department shall keep confidential trade secrets contained in any statement submitted to the Department pursuant to this section.

NOTE: Authority cited: Section 25175, Health and Safety Code.

Reference: Section 25175, Health and Safety Code.

HISTORY:

1. New Article 12 (Sections 66763 and 66796) filed 5-16-79; effective thirtieth day thereafter (Register 79, No. 19).

66796. LIST OF RECYCLABLE HAZARDOUS WASTE TYPES

(a) Wastes of the types cited on the list of Recyclable Hazardous Wastes in subsection (b) are waste types which the Department finds to be both economically and technologically feasible to recycle.

(b) List of Recyclable Hazardous Waste Types (including examples of potential recycling methods or uses):

(1) Commercial chemical products including unused laboratory grade products (return to manufacturer or supplier or turn over to chemical salvager for resale or resource recovery; sell or barter to another consumer).

(2) Solvents, used or contaminated (reclaim, in-plant or through custom solvent reclaimer, by purification processes of rectification, ion exchange, adsorption, or extraction; or if

combustible, use in-plant or sell for use as energy resource for heating, cooling, or power generation), including:

(A) Halogenated solvents such as trichloroethane, perchloroethylene, methylene dichloride, chloroform, carbon tetrachloride, Freons[®];

(B) Oxygenated solvents, such as acetone, methyl ethyl ketone, methanol, ethanol, butanol, ethyl acetate;

(C) Hydrocarbon solvents, such as hexanes, Stoddard, benzene, toluene, xylenes, paint thinner.

(3) Used or unused petroleum products, including motor oils, hydraulic fluids, cutting lubricants, fortified weed oils (turn over to reclaimer of motor oils and other petroleum products for recovery of petroleum components; or use in-plant, or sell for use as energy resource for heating, cooling, or power generation).

(4) Pickling liquor (recover iron salts by concentration, e.g., by solar evaporation of spent liquor).

(5) Unspent acids, such as hydrochloric, hydrofluoric, nitric, phosphoric, sulfuric, in concentrations exceeding 15% (use directly as pickling and etching acids; in neutralization of alkaline process waste streams; or in manufacture of useful salt products, e.g., ammonium salts, calcium fluoride).

(6) Unspent alkalis, including hydroxides and carbonates of sodium, potassium, and calcium, and acetylene sludge (use directly in certain metal finishing operations; in neutralization

of pickling acids and acid process waste streams; in precipitation of heavy metals; or in manufacture of useable products, e.g., calcium oxide, sulfate, fluoride, and chloride).

(7) Unrinsed empty containers of iron or steel used for pesticides or other hazardous chemicals:

(A) Pesticide containers (return to the registrant or, if 30- or 55-gallon size, recondition, pursuant to Section 3143 of Title 3, California Administrative Code; or shred or bale, after removal of pesticide residues by solvent or chemical action or burning, for use as steel scrap).

(B) Hazardous chemical containers (other than pesticide containers return to product supplier or, if 30- or 55-gallon size, recondition; or shred or bale, after removal of chemical residues by solvent or chemical action or burning, for use as steel scrap).

NOTE: Authority cited: Section 25175, Health and Safety Code.

Reference: Section 25175, Health and Safety Code.

APPENDIX C

STATE OF CALIFORNIA REGULATIONS GOVERNING LAND
DISPOSAL OF HAZARDOUS WASTES

APPENDIX C

STATE OF CALIFORNIA REGULATIONS GOVERNING LAND DISPOSAL OF HAZARDOUS WASTES

The following excerpts from the regulations contained in the "Waste Discharge Requirements for Nonsewerable Waste Discharge to Land; Disposal Site Design and Operation Information" (prepared by the State of California, State Water Resources Control Board, reprinted January 1978) are pertinent to land disposal of hazardous wastes.

PART A - INTRODUCTION

The classification of disposal sites is based on the geologic and hydrologic features of the disposal area and the capability for protection of surface and ground water quality. The categorization of wastes is based upon the threat that the type of waste material presents to water quality.

This document has been developed to describe the additions to the Administrative Code concerning waste disposal to land and to indicate parameters that are considered in formulating waste discharge requirements for waste disposal sites.

PART D - INFORMATION REGARDING DEVELOPMENT OF WASTE DISCHARGE REQUIREMENTS

General Considerations

General Policy--

All liquid and solid waste disposal sites must be situated, designed, and operated to provide protection to the surface and

ground water so as to attain the highest water quality which is reasonable and to prevent nuisance.

Filing Report of Waste Discharge--

Prior to the disposal of waste at a new site or when a material change in the waste discharge is planned (such as at an expanded site or where the waste type is changed), the operator is required by the water code to file a report of waste discharge with the appropriate Regional Board to receive site classification, reclassification, or waste discharge requirements.

Other Permits--

Any site approved to receive hazardous waste must also have a permit to operate the site from the California Department of Health. All sites must be in conformance with the state-approved County Solid Waste Management Plan and must have a Solid Waste Management Board Permit for operation at the site.

California Environmental Quality Act--

Requirements must be considered prior to approval for discharge.

Approval of Local Agencies--

A report of waste discharge, complete in all other aspects, shall be considered incomplete without a certification that all local agencies with jurisdiction have approved the use of the site for the intended purposes.

Filing Fees--

A filing fee is required to be submitted with the report of waste discharge.

Information Provided by Discharger--

Sufficient information must be provided by the discharger to enable evaluation of the disposal operation in relation to conditions in the disposal area, such as local geohydrology and the surface water hydrology required by Section 2551.*

The information submitted by the discharger in the form of a technical report accompanying the report of waste discharge can be summarized as including the following:

- a. Discharger's name and address and legal owners' names and addresses.
- b. Description of waste materials being received or anticipated to be received at the site, including average monthly quantity in gallons, cubic yards, or tons; types of materials (make special note of the high moisture content materials and specific characteristics of Group I wastes).
- c. Area to be used includes a topographical map showing:
 1. Property boundary of the disposal site
 2. Boundary of areas used or to be used for waste disposal.
 3. Location of springs, standing water, and nearby wells.
- d. General plan of disposal site operation and sequence of filling operations. A brief description is desirable regarding the manner of waste disposal, i.e., use of

* Unless otherwise indicated, all code sections are from California Administrative Code, Title 23, Chapter 3, Subchapter 15.

ponds or liquid-spreading areas, or landfilling involving daily burial of wastes.

e. Detailed Site Information:

1. Hydrological data for the disposal area. Include a description of surface water drainage provisions, and show calculations for the flooding frequency of streams within or adjacent to the site.
 2. Geohydrological information that indicates the relation of the waste disposal area to ground water quality.
 3. Locations and depths of excavations of soil borrow and waste disposal areas. Indicate the lowest elevation (USGS datum) proposed for waste placement.
- f. Description of facilities and measures to prevent illegal discharge of nonpermissible wastes to the site during and between normal operating periods.
- g. Information concerning control measures proposed for drainage, leachate, and gases.
- h. Description of anticipated land use after termination of disposal operations.
- i. Vegetative cover and other facilities required for the stabilization of disturbed land areas.

Technical details regarding site design and construction specifications will normally be contained in reports submitted by the discharger for approval by the Regional Board Executive Officer. The discharger may be required to provide a statement in writing that he will implement the recommendations contained in a

technical report prepared by his consultant. In cases where the reports offer several alternative solutions, the discharger may be required to submit an itemized listing of the alternatives selected.

The burden of proof that deviations can be made from standard procedures (i.e., the acceptance of certain Group I wastes in Class II-1 sites), and that disposal site criteria are met, must be provided by the discharger. Substantial exploratory investigations may be required to provide such information; the time and expense involved rightly should be borne by the proponent of the disposal operation.

Evaluation Procedures and Applicable Waste Discharge Requirements

Evaluation of the disposal site by the Regional Board and its advisory agencies will result in classification of the disposal areas and determination of the allowable wastes to be received. Waste discharge requirements commonly encompass the following:

- a. Delineation of allowable areas of waste placement and limits of depth of waste placement.
- b. Control measures to be achieved for wastes, tributary surface drainage (including prevention of inundation), subsurface drainage, rainfall infiltration, and erosion control.
- c. Leachate and gas control measures that are necessary.

More than one class of disposal area may be established within a disposal site. This may be necessary because of the varying conditions which may occur within a site (i.e., different

geological conditions, the provision of a barrier in one portion of the site, or different ranges of flooding potential).

Class I Sites--

The criteria for Class I sites are contained in Sections 2510 and 2531. Usable ground water can underlie Class I sites only under unique conditions. Disposal areas overlying usable ground water present problems caused by the unknowns involved in geological conditions, possible unobserved hydraulic continuities between the ground water and the waste disposal area, and the uncertainties associated with Group 1 wastes.

Normally, no runoff or overflow from a Class I site is allowed. All runoff from Group 1 waste disposal must be contained within the disposal area.

Specifications for structures to control lateral waste migration are contained in Section 2531. The construction of such structures may be required to be supervised by a qualified engineer; inspection of the construction will usually be made by the Regional Board's staff. A report of the details of the barrier structure is to be filed with the Regional Board by the discharger.

Surface Water Control--

Sections 2510(d) and 2510(e) require that Class I sites not be subject to inundation or washout; Class II sites must be protected from washout or inundation by a 100-year flood, and Group 2 wastes may not be contacted by surface drainage. Sections 2511(a) and 2511(b) provide additional details.

Construction of a culvert used to carry surface drainage under a Class I or II disposal area is discouraged. If such a location is unavoidable, the culvert must be constructed of materials that will last for the active life of the landfill. They should be resistant to the effects of landfill gases and leachate (acidity, sulfide, and anaerobic conditions), have watertight joints, and be of sufficient strength to withstand the maximum loading of the planned landfill (approximately 1,800 lb/CY including water content). Culverts should be installed in undisturbed soil and not in contact with or through landfills containing Group 2 materials. Trash racks should be installed at culvert inlets to prevent plugging of the culvert.

Disposal areas containing ponded water should be dewatered and maintained in a dry state.

Seepage Control--

Subsurface flow in the form of springs or seepage should be prevented from entering a disposal area comprised of Group 2 wastes. It is preferable to collect and drain the seepage water around the fill. If that method is not possible, then the drainage might be accomplished by constructing a "French drain," comprised of Group 3 wastes or other porous media in the seepage area. An impermeable layer should separate the base of the Group 2 landfill and the drain materials to prevent leachate and carbon dioxide gas from mixing with the seepage.

Addition of Water--

Operators of some refuse disposal sites apply water for compaction, litter control, and fire control purposes. An excessive

amount of water is sometimes applied causing a threat of overloading the absorption capacity of the landfill mass and formation of excess leachate. Water as an aid to compaction has not been proven for landfill construction, although it does have merit for dust control. The use of water for these purposes should be minimized in most instances.

The water balance of a disposal area is dependent on factors such as the following:

- a. Absorption capacity of the landfill materials - a factor that is variable because of type of waste or void space in fill materials. Average range: 25 to 40 gallons per cubic yard for general refuse.
- b. Amount of water added to the landfill minus evaporation - sources would be direct precipitation, drainage entering the fill, water content of wastes, and water added for dust control or compaction.
- c. Amount of water contained in the waste plus rainfall minus evapotranspiration.

Theoretically, the absorption capacity of a general refuse landfill located in arid portions of California can be safely utilized for the disposal of liquids or high moisture content materials. The Regional Board may place restrictions on liquid volumes added to such landfills. As an alternative to the addition of the liquid to landfill materials, consideration should be given to use of separate disposal areas for liquid or high moisture content wastes, such as ponds, pits, trenches, or spreading

and discing, in areas which are not located adjacent to or overlying Group 2 wastes.

Additional details are contained in Section 2532.

Leachate Control--

In most parts of California, the waste discharge requirements for the disposal of Group 2 wastes normally will result in the landfill being kept relatively dry to minimize leachate production and lessen decomposition rates and associated gas production. At disposal areas where facilities have been designed to capture leachate and recirculate it or otherwise treat it, leachate production need not be a critical factor unless leachate collection and treatment facilities become overloaded.

Depths to Ground Water--

Information regarding the highest anticipated elevation of the capillary fringe of the ground water may be obtained from agencies such as the State Department of Water Resources or local water districts. Future changes in hydrologic conditions, such as rises in ground water elevations because of ground water recharge activities, new imported water supplies, or reduced ground water pumping, are considered by the Regional Board when establishing waste discharge requirements.

Monumentation of Boundaries--

The checking of minimum elevations and boundaries of disposal areas requires monumentation of the approved disposal area limits. For sites at which minimum elevation of waste placement or a definite waste disposal area is defined, bench marks or

boundary markers may be required to identify these respective limits.

Gas Control--

At sites where barriers to gas movement exist (natural, wet clay soils or artificial barriers) and where structures are situated along the perimeter of the landfill, methane gas monitoring may be required.

Settlement--

Final settlement of a landfill composed of Group 2 wastes may be in the order of 5 to over 20 percent of the total depth to the landfill. A landfill operation in relatively level terrain should result in construction of a mound having a height above the adjacent land surface which will compensate for later subsidence and settlement. Otherwise, a depression may be formed in the final surface of the site causing ponding of water and increased infiltration into the landfill. An alternative to this would be the periodic addition of more soil cover material.

Specifying the Methods to Achieve Compliance--

California Water Code Section 13360 allows a Regional Board to prescribe methods for "the installation of riprap, the construction of walls and dikes, and the installation of surface and underground drainage facilities to prevent runoff from entering the disposal area or leakage to underground or surface waters or other reasonable requirements to achieve the above or similar purposes."

Substantial Changes in Site Operation--

Material changes in the waste volume, type, or concentration, or increases in area or depth to be used for waste disposal beyond that specified in the waste discharge requirements require a new report of waste discharge.

PART E - MONITORING OF DISPOSAL SITES

Monitoring programs are established on an individual site basis. The following paragraphs describe basic monitoring measures which may be included.

Predisposal Monitoring

Monitoring of the local ground and surface water, which is considered to be within the influence area of a disposal site, may be required to obtain baseline data which is indicative of original conditions or effects caused by sources unrelated to the disposal site.

Surveillance Items

Routine surveillance of a disposal site normally provides a review of the adequacy of on-site drainage systems and other conditions.

Water Level Records

Records should be maintained of the depth to ground water underlying the disposal areas. These data may be obtained from existing wells if suitable. At critical locations, the installation of piezometers or small-diameter wells at the disposal site may be required.

Measurement of Leachate Volumes

At disposal sites where barriers are utilized for water quality protection, measurements may be required to detect the build-up of leachate levels into the landfill above or behind the barrier.

Seepage Collection

Seepage collection drains and sumps within hydraulic barrier installations should have continuous fluid level-measuring facilities to provide data on the effectiveness of the barrier.

Monitoring Points

Monitoring point locations are selected on the basis of the characteristics of local ground water and surface hydrology and the site design. Generally, upgradient and downgradient samples are desired.

Analyses

Selection of constituents for analysis and evaluation will be related to the type of wastes discharged. Common basic analyses for ground water, and downgradient springs and streams at refuse disposal sites include pH (field test), electrical conductivity or total dissolved solids, chloride, hardness, and total alkalinity. Specialized monitoring which is dependent on the characteristics of the disposal area and the waste materials, may include toxic materials, heavy metals, dissolved CO₂ (field test), iron hydrocarbons, color, BOD, tannins, and lignins. Gas probes for methane and carbon dioxide gas sampling may be necessary in special situations.

Schedule for Submission of Reports

For solid waste disposal sites receiving up to 200 tons of waste per day, monitoring reports are generally required on a quarterly basis. For solid waste disposal sites receiving greater than 200 tons per day, monthly monitoring reports may be required. If special wastes are received at a site, such as high moisture content wastes or Group 1 wastes, items such as the date, type and amount of waste, and the location of place of disposal in the site, may be required to be recorded.

The volume and type of Group 1 waste and the manner and location of disposal are required to be recorded at Class I sites (Section 2534). State Liquid Waste Hauling Reports (or other approved forms) will be used for this purpose. To facilitate the description of the place of waste disposal within the site, an identification system for the individual disposal areas within the site is to be provided (i.e., Area 1 or Pond A) at these sites. Group 1 waste disposal is to be indicated by noting the identification code in the applicable blank in the Disposal Facility portion of the record form.

As disposal operations proceed, the location of filled areas or changes in site operation may be required to be periodically updated on the disposal site maps to indicate as-built conditions.

Earthen Materials

Monitoring reports should include facilities constructed, vegetation cover, and other actions taken to prevent the transport of material from the site.

The specific minimum requirements established for Class I disposal sites are outlined in the following excerpts from PART F - DISCUSSION OF SUBCHAPTER 15 SECTIONS.

ARTICLE 2. CLASSIFICATION OF WASTE DISPOSAL SITES

2510. Class I Disposal Sites

Class I disposal sites are those at which complete protection is provided for all time for the quality of ground and surface waters from all wastes deposited therein and against hazard to public health and wildlife resources.

The following criteria must be met to qualify a site as Class I:

1. 2510(a). Geological conditions are naturally capable of preventing vertical hydraulic continuity between liquids and gases emanating from the water in the site and usable surface or ground waters.
2. 2510(b). Geological conditions are naturally capable of preventing lateral hydraulic continuity between liquids and gases emanating from wastes in the site and usable surface or ground waters, or the disposal area has been modified to achieve such capability.
3. 2510(c). Underlying geological formations which contain rock fractures or fissures of questionable permeability must be permanently sealed to provide a competent barrier to the movement of liquids or gases from the disposal site to usable water.

4. 2510(d). Inundation of disposal areas shall not occur until the site is closed in accordance with requirements of the Regional Board.
5. 2510(e). Disposal areas shall not be subject to washout.
6. 2510(f). Leachate and subsurface flow into the disposal area shall be contained within the site unless other disposition is made in accordance with requirements of the Regional Board.
7. 2510(g). Sites shall not be located over zones of active faulting or where other forms of geological changes would impair the competence of natural features or artificial barriers which prevent continuity with usable waters.
8. 2510(h). Sites made suitable for use by man-made physical barriers shall not be located where improper operation or maintenance of such structures could permit the waste, leachate, or gases to contact usable ground or surface water.

ARTICLE 3. CLASSIFICATION OF WASTES DISCHARGED TO LAND

2520. Group 1 Wastes

Group 1 wastes consist of or contain toxic substances as defined in Section 2500 and substances which could significantly

impair the quality of usable waters. Examples include, but are not limited to, the following:

- 2520(a). Municipal origin:
 - Saline fluids from water or waste treatment and reclamation processes
 - Community incinerator ashes
 - Toxic chemical toilet wastes.
- 2520(b). Industrial origin:
 - Brines from food processing, oil well production, water treatment, industrial processes, and geothermal plants
 - Other toxic or hazardous fluids from industrial operations such as spent cleaning fluids, petroleum fractions, chemicals, acids, alkalies, phenols, and spent washing fluids
 - Substances from which toxic materials can leach, such as process ashes, chemical mixtures, and mine tailings
 - Rotary drilling muds containing toxic materials.
- 2520(c). Agricultural origin:
 - Chemicals such as pesticides or chemical fertilizers
 - Discarded containers of chemicals unless adequately cleansed.
- 2520(d). Other toxic wastes such as compounds of arsenic or mercury or chemical warfare agents.

2521. Group 2 Wastes

Group 2 wastes consist of or contain chemically or biologically decomposable material which does not include toxic substances nor those capable of significantly impairing the quality

of usable waters. Examples include, but are not limited to, the following:

- 2521(a). Municipal and industrial origin:

- Garbage from handling, preparation, processing, or serving of food or food products
- Rubbish such as paper, cardboard, tin cans, cloth, glass, etc.
- Construction and demolition materials such as paper, cardboard, wood, metal, glass, rubber products, roofing paper, and wallpaper
- Street refuse such as sweepings, dirt, leaves, catch basin cleanings, litter, yard clippings, glass, paper, wood, and metals
- Dead animals and portions thereof
- Abandoned vehicles
- Sewage treatment residue such as solids from screens and grit chambers, dewatered sludge, and septic tank pumpings
- Water treatment residue such as solid organic matter collected on screens and in settling tanks
- Ashes from household burning
- Infectious materials and hospital or laboratory wastes authorized for disposal to land by official agencies charged with control of plant, animal, or human disease
- Magnesium and other highly flammable or pyrophoric materials.

● 2521(b). Agricultural origin:

- Plant residues from the production of crops including, but not limited to, stalks, vines, green drops, culls, stubble, hulls, lint, seed, roots, stumps, prunings, and trimmings
- Manures
- Dead animals or portions thereof
- Adequately cleansed pesticide containers.

ARTICLE 4. USE OF SITES

2530. Disposal at Classified Sites

Disposal of solid or liquid wastes shall be only at sites which have been approved by the appropriate Regional Water Quality Control Board consistent with the classification established by this subchapter and for which waste discharge requirements have been prescribed, unless a waiver has been granted in accordance with Section 2540 of this subchapter.

2531. Disposal in Class I Sites

Any wastes may be disposed of in unlimited Class I sites. Wastes disposed of in limited Class I disposal sites shall be subject to waste discharge requirements, which include limits on the type and quantity of material entering the site, the concentration of material in the waste disposed of on the site, and the amount of material present or remaining on the site after evaporation of liquids.

Information concerning the following specific criteria from Section 2510 should be submitted:

- a. Describe vertical hydraulic continuity control.
- b. Describe lateral hydraulic continuity control.
- c. Indicate absence of continuity of rock fractures or fissures.
- d. Evaluate surface drainage provisions.
- e. Evaluate flooding and washout potential.
- f. Evaluate need for any discharge from the disposal area - type and quantity of discharge.
- g. Review active faulting potential including subsidence or uplift so that design of containment features is commensurate with the land movement risks.
- h. Indicate plans for site operations near barriers.
- i. Indicate plans of subsequent use of property (if known).

Setback distances may be required between water control barriers and adjacent property lines and water bodies to enable future corrective measures to be taken if necessary.

The discharger should state the effective permeability he will attain in structures created to prevent lateral waste migration; this should be consistent with the criteria listed in the Section 2510(b) discussion. In such structures, it may be necessary to provide a positive hydraulic barrier constructed of impermeable materials and equipped with a seepage collection drain and sump for return of the seepage upgradient for disposal.

Earthfill structures should be compacted under the direction of a qualified soils engineer. The following are example specifications for an earthfill barrier:

Material placed in the barrier shall be compacted at 95 percent relative density at optimum moisture content or greater. Control testing shall be performed routinely during material placement to ensure that every lift is compacted properly. Tests in the different lifts shall, so far as possible, be staggered so as not to coincide in a vertical plane and so as to approximate representative coverage of the entire surface area.

Where tests reveal that material placement is less than the minimum standard of 1×10^{-8} cm/sec permeability, it shall be removed and be recompacted to the minimum and again tested.

Construction of levees (or dams) may be inspected by the Regional Board staff. A narrative report of conditions encountered during construction should be provided to the Regional Board by the engineering geologist or the soils engineer.

The Regional Board should be furnished copies of as-built plans showing the details of the barrier, including materials of construction, compaction densities, effective permeability, depth to bedrock, grouting, etc. The exact location and physical measurements of compacted earthfill barriers, cutoff walls, and/or hydraulic barriers should be indicated.

The maximum permissible height for storage of liquids behind a barrier may be stipulated. The liquid level buildup at the

upstream face of the barrier and within the seepage collection drain or sump may be required to be monitored.

The face of barriers must be protected from deterioration by erosion or by rodents through placement of riprap or periodic maintenance. The effectiveness of the barrier must be maintained for the active life of the site.

It should be noted that other appropriate agencies may restrict specific wastes received by a Class I site or the manner of operation pursuant to their authority.

2534. Record Maintenance and Inspection

Operators of Class I sites shall maintain at their business address legible records of the volume and type of Group 1 waste received at the site, and the manner and location of disposal. Such records shall be maintained as specified by the State Board for a period of not less than 10 years on forms approved by the State Board. Records shall be available for review by representatives of the State or Regional Board at any time during normal business hours. When disposal operations cease, the records shall be forwarded to the Regional Board.

2535. Completion of Disposal Operations

2535(a)--

Prior to cessation of disposal operations at a waste disposal site, the operator shall submit a technical report to the appropriate Regional Board describing the methods and controls to be used to assure protection of the quality of surface and ground waters of the area during final operations and with any proposed subsequent use of the land. This report shall be prepared by or

under the supervision of a registered engineer or a certified engineering geologist.

2535(b)--

The methods used to close a site and assure continuous protection of the quality of surface and ground water shall comply with waste discharge requirements established by the Regional Board.

The technical report should be furnished 90 days prior to cessation of disposal operations. The report accompanied by a map of the disposal site should describe the following items:

- a. The boundaries of areas used for waste disposal.
- b. Control of surface drainage flow through the site.
- c. Evaluation of the anticipated settlement due to decomposition and consolidation of the wastes.
- d. Manner of surface drainage control in waste disposal areas.
- e. Thickness of cover and physical properties including permeability, expansion characteristics, and erodibility.
- f. Relationship of waste disposal area to underlying ground water quality.
- g. Location of ground water monitoring points (Class II site).
- h. Erosion control plan.
- i. Proposed subsequent use of the land.

Subsequent uses of the land should be evaluated to determine if conditions will be created which may cause a threat to water

quality. Examples of such conditions on filled areas at Class II sites include:

- a. Creation of a pond.
- b. Growing of irrigated crops.
- c. Heavy watering of parks and golf courses.
- d. Water mains and sewer lines broken because of settlement problems.
- e. Erosion potential.

Inundation or contact of water with past disposal areas utilized for disposal of Group 1 wastes must be prevented, unless it is shown that the wastes have been neutralized or rendered insoluble, and hence do not present a threat to water quality.

2535(c)--

The owner of the waste disposal site shall have a continuing responsibility to assure protection of usable waters from the waste discharge, and from gases and leachate that are caused by infiltration of precipitation or drainage waters into the waste disposal areas or by infiltration of water applied to the waste disposal areas during subsequent use of the property for other purposes.

The owner of the property used for waste disposal is considered to be responsible in assuring protection measures are taken after completion of disposal operations.

ARTICLE 6. IMPLEMENTATION

2550. Waste Discharge Requirements for Waste Disposal Sites

2550(a)--

Persons planning to establish new waste disposal sites or expand existing sites shall notify the appropriate Regional Board of their proposal for the purpose of receiving site classification, reclassification, or waste discharge requirements prior to the disposal of waste at the new or expanded site in accordance with Section 13260, et seq., of the Water Code.

2551. Information Submitted by Discharger

A technical report describing relevant details of disposal site construction and operation that relate to the protection of water quality shall be submitted with the report of waste discharge by the site proponent or operator prior to the establishment of a new waste disposal site, expansion of an existing site, or for continuing operation of an existing site for which requirements have not been prescribed. The report shall include at least the following:

- a. Description of the waste materials anticipated to be received.
- b. A map showing the boundaries of the disposal site and waste disposal areas.
- c. General description of disposal site operations.
- d. Detailed hydrological and geological data for the disposal area.
- e. Measures proposed for control of drainage, leachate, and gases.

f. Anticipated land use after termination of disposal operations.

2552. Report of Waste Discharge

In addition to the requirements of Section 2205, a report of discharge for a waste disposal site shall contain, or be accompanied by, a certification that all local agencies with jurisdiction have approved use of the site for the intended purposes. Without such certification, reports shall not be accepted for filing pursuant to Section 2206.

APPENDIX D

LIST OF HAZARDOUS WASTE HAULERS REGISTERED WITH
CALIFORNIA DEPARTMENT OF HEALTH SERVICES, HAZARDOUS
MATERIALS MANAGEMENT SECTION, MAY 1, 1980

List Of

HAZARDOUS WASTE HAULERS

Registered With

*California Department of
Health Services*

*Hazardous Materials
Management Section*

May 1, 1980

This is an alphabetical listing of all Registered Hazardous Waste Haulers. The list includes firms which haul-for-hire as well as those which haul their own waste only.

If you are seeking a firm in your area to haul your hazardous waste do the following:

1. Consult the yellow pages of your phone directory for listings under "Industrial Waste" or similar headings.
2. Verify registration of advertised firms using this list.
3. Contract only with firms holding a valid registration (registration expires annually).

If a firm is not listed but claims to be registered, verification can be made by phoning the Department at (916) 322-2337.

You will be notified of the correctness of filing fee and submittal of any additional information deemed necessary to complete your Report of Waste Discharge pursuant to Division 7, Section 13250 of the State Water Code, or to complete your permit application pursuant to Government Code Section 66796.30 and Health and Safety Code Section 25200.

REGIONAL WATER QUALITY CONTROL BOARD
DEPARTMENT OF HEALTH SERVICES
SOLID WASTE MANAGEMENT BOARD
DEPARTMENT OF FORESTRY

**INSTRUCTIONS FOR COMPLETING APPLICATION
FOR FACILITY PERMIT/WASTE DISCHARGE**

This application form is for a permit (and/or waste discharge requirements) to discharge, receive, or dispose of liquid or solid wastes regulated by the California Regional Water Quality Control Boards (RWQCB), the Department of Health Services (DOHS), the State Solid Waste Management Board (SWMB), or the California Department of Forestry (CDF). This form and the filing fee¹ should be sent to the appropriate agency(s) as indicated below:

FORM USE	APPROPRIATE AGENCY			
	RWQCB	DOHS	SWMB ²	CDF ³
Report of Waste Discharge	X			
Application for a Hazardous Waste Facility Permit		X		
Application for a Solid Waste Facilities Permit			X	
Application for a Rubbish Dump Permit				X

If you have any questions on the completion of this form, please contact the appropriate agency for assistance.

For a direct discharge (point source discharge) to surface waters, a different application form is required in place of this Form 200. Please contact the appropriate Regional Water Quality Control Board for a National Pollutant Discharge Elimination System (NPDES) application form to apply for a permit for this type of discharge.

This application for waste disposal provides initial notice of a waste discharge. In most instances, additional information will be required, and should be submitted on 8½" x 11" paper. Complete the enclosed form and return it with any required report^{4,5} and the filing fee to each appropriate agency(s). The agency(s) will advise you of any additional information that may be required to complete this application and waste disposal report.

The effective date of the application is the date when all required information and the correct fee are received by the agency(s). You will be notified of this effective date by each agency.

¹ AMOUNT OF FILING FEES

RWQCB

Use flow or units reported in Item VI (Form WRCB 200) and the appropriate class schedule A, B, B1, B2, B3, or C (attached Filing Fee Schedule).

Make check payable to: STATE WATER RESOURCES CONTROL BOARD and mail, together with report of waste discharge, to the appropriate Regional Board. No report can be accepted without the fee.

SWMB

Local solid waste enforcement agencies shall determine the exact fee. The maximum application fee that can be required is five hundred dollars (\$500).

DOHS and CDF

No fee is required.

² Check with local or county enforcement agency for specific permit requirements and/or exemptions.

³ If the site is within an incorporated city or on federal land, a copy need *not* be sent to CDF.

⁴ REQUIRED REPORT FOR DOHS: An Operation Plan.

⁵ REQUIRED REPORT FOR SWMB:

A "Report of Disposal Site Information" is required to obtain a permit to operate a disposal site.

A "Report of Station Information" is required to obtain a permit to operate a large volume transfer station (greater than 100 cubic yards per operating day).

A "Plan of Operation" is required to obtain a permit to operate a small volume transfer station (less than 100 cubic yards per operating day).

Where there is a significant change in design, operation, operator, or size of facility, details of the changes must be submitted to amend previous report.

See attachments for information to be contained in reports.

I. FACILITY: Self-explanatory.

II. REASON FOR FILING:

- A. New discharge or facility: A discharge or facility that is proposed but does not now exist.
- B. Existing discharge or facility: Discharge or facility is currently in operation but does not have waste discharge requirements or a permit.
- C. Increase in quantity of discharge: Discharge quantity increased or is proposed to increase above 25% of the quantity set forth in the existing requirements; or less if such an increase, in your opinion, might have a significant impact on the quality of the receiving waters or disposal area. Final determination of whether the reported increase would have a significant effect will be made by the appropriate agency.
- D. Change in character of discharge: A material change in characteristics of the waste from existing discharge requirements is defined as follows:
 - a. The addition of a major industrial waste discharge to a discharge of essentially domestic sewage, or the addition of a new product by an industrial facility resulting in a change in the character of the waste.
 - b. A change in the type of waste accepted at a disposal facility.
- E. Change in place or method of disposal: Change from a land disposal to a direct disposal to water; change in the method of treatment which would significantly alter the waste discharge characteristics; moving the discharge to another drainage area, to a different water body, or to a disposal area significantly removed from the original area, causing different water quality or nuisance effects.
- F. Change in design or operation: A significant change in design or operation from that existing when discharge requirements or other permits were last issued.
- G., H., and I.: Self-explanatory.

III. TYPE OF OPERATION: Self-explanatory.

IV. TYPE OF WASTE:

- A. Sewage, sewage sludge, and/or septic tank pumpings: Human or animal origin (not industrial).
- B. Industrial wastes: Liquid, solid, gaseous or radioactive waste from any producing, manufacturing, or processing operation.
- C. Municipal solid wastes: Residential and commercial refuse, garbage and/or rubbish.
- D. Hazardous wastes: Waste or a combination of wastes which because of its quantity, concentration, or physical, chemical, or infectious characteristics may either: (1) Cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness. (2) Pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, or disposed of, or otherwise managed.
- E. Agricultural wastes: Wastes resulting from the production and processing of farm or agricultural products.
- F. Animal wastes: Wastes from confined holding or feeding areas.
- G. Forest product wastes: Shavings, sawdust, chips, bark, slabs, edgings, wood and other flammable waste material incidental to the processing of wood products.
- H. Construction/demolition wastes: Waste building materials, packaging and rubble resulting from construction, remodeling, repair, and demolition operations on pavements, houses, commercial buildings, and other structures.
- I. Inert materials: Brick, rock, concrete, soil, silt, clay, glass, asphalt, plastics, plasterboard, rubber, and any other inert materials. (Does not include wood.)
- J., K., and L.: Self-explanatory.

V. SITE DESIGN CAPACITY: Self-explanatory.

VI. QUANTITY OF WASTES:

- A., C., and D.: Self-explanatory.
- B. Design flow: Treatment design flow (not maximum hydraulic capacity) when for sewage treatment.

VII. EXACT LOCATION OF POINT OF DISPOSAL: Map or sketch should be to a scale adequate to show location precisely. Use of a portion of a U.S.G.S. Quadrangle map is recommended. Map must show proximity of disposal location to populated areas and must indicate all wells and drainage courses within 1,000 feet of any disposal point(s).

VIII. SOURCE OF WATER SUPPLY (This is the water that contributes to or transports the waste.):

- A. Municipal or utility service: Give name and address of the water purveyor.
- B. Individual wells: Those not part of a municipal or utility service.
- C. Surface supply:
 - (1) Name of stream, lake, spring, etc., if named.
 - (2) Type of water rights: Check appropriate item.
 - (3) If a state permit or license has been granted, give identification number.

IX. ENVIRONMENTAL IMPACT REPORT: Self-explanatory.

INTRODUCTION

In accordance with Section 66373, Title 22, California Administrative Code, an Operation Plan shall be submitted to the California State Department of Health Services (DHS) by a person who has applied for a Hazardous Waste Facility Permit. Operators of either on-site facilities (facilities situated on the waste producer's property) or off-site facilities must apply for a permit and submit an Operation Plan. Hazardous waste facilities which must have permits include: transfer stations; storage, treatment, and disposal facilities; and hazardous waste resource recovery facilities. On-site facilities which store hazardous wastes for less than 60 days are exempt from the permit requirement.

To a large extent, the Operation Plan will provide the information on which the provisions and compliance requirements of the permit will be based. Consequently, the Plan should present information in sufficient detail to provide a clear understanding of: the characteristics of the site; the physical facilities, equipment, operating procedures, and personnel available; and the provisions for responding appropriately to emergencies and other contingencies. The organization of the Plan should conform insofar as possible to the "Table of Contents" on pages i and ii of this document.

The following instructions have been developed to assist in the preparation of the Operation Plan. Much of the information required in these instructions might have been developed previously in: facility plans and specifications; reports supporting applications for waste discharge requirements, land use

permits, and solid waste facility permits; or in other documents. If this is the case, the appropriate sections of those documents can be made a part of the Plan by referencing the sections and attaching copies to the Plan.

The following instructions have been prepared to cover all operations which might be carried out at a hazardous waste facility. Obviously, the portions of the instructions which do not pertain to the specific facility for which the Plan is being prepared can be disregarded.

OPERATION PLAN

I. FACILITY IDENTIFICATION

The initial section of the Operation Plan should identify: the name, address, and specific location of the facility; the name and address of the operator; and the names of those persons who were responsible for preparing the Plan. This information will ensure that there is no misunderstanding regarding the identity of the specific facility for which the Plan has been prepared and that appropriate contact persons have been identified.

A general statement of the type(s) of waste management activities which takes place at the facility should be included. For example, "...the facility provides for the treatment and disposal of hazardous wastes through the burial of containerized wastes, neutralization and ponding of acid wastes, and landspreading of oily wastes".

Facility Map or Layout. A map or layout of the facility must be submitted as part of the Operation Plan (Section 66376 (a) (6)).*

The map should be drawn to an appropriate scale (e.g., 200 feet to the inch) and present:

- Existing topographical contours of the property;
- Proposed final elevations of the completed facility;
- Legal boundaries for which clear title or lease is held;
- Locations of permanent access and permanent internal roads;
- Location and type of fencing;
- Locations of unloading facilities, treatment facilities, storage facilities, equipment cleaning areas, and disposal areas;
- Locations and descriptions of environmental monitoring stations;

* Section numbers refer to Hazardous Waste Control Regulations in Chapter 30, Division 4, Title 22, California Administrative Code.

- All land uses and zoning outside of the facility and within one-quarter mile of the perimeter for proposed new facilities if available to the applicant;
- Locations of facilities for control of surface or subsurface drainage, leachate or landfill gases; and
- Locations of power lines, pipelines, and easements through the facility.

II. WASTE CHARACTERIZATION

The Operation Plan for hazardous waste facilities shall include: known or anticipated types, general characteristics, and weight or volume of hazardous wastes received or handled (Section 66376 (a) (1)). Accurate information about the types and volumes of the wastes is essential to evaluating the suitability and capability of the physical facilities, the equipment, the safety provisions, and almost all other aspects of the operation. Consequently, the Plan must identify the amounts and forms of various types of wastes which are managed, or are proposed to be managed, at the facility. For example, if pesticides constitute a major hazardous waste, the Plan should indicate the amounts, general types, and the forms in which pesticide wastes arrive at the facility (e.g., tank truck loads, miscellaneous wastes in drums, unrinsed containers, etc.). Information should be obtained from past operating records, copies of manifests, and any other available sources.

III. MAJOR PHYSICAL FACILITIES

The Operation Plan should contain a description of the major elements which provide for the treatment, storage, disposal, and reclamation of wastes at the facility. The location of these facilities should be shown on the facility map. Emphasis should be given to design features which provide for the safe management of the wastes. For all elements, the Plan should describe the features or controls which are provided to prevent discharges to the environment and to prevent uncontrolled reactions. Whenever appropriate, illustrations or engineering drawings should be provided to enhance the descriptions of the equipment and design features.

A. Storage. The facility map should identify the locations of waste storage areas and the types and quantities of wastes to be stored. The Plan should identify the manner in which each type of waste is to be stored and the anticipated length of time each type is to be stored. The Plan should describe the design features of the storage areas which would contain or prevent any spills of hazardous wastes including:

- Ditches, trenches, or other provisions for containing spills;
- Provisions to prevent percolation of spilled wastes;

- Features of containers, vents, hoods, drain valves, floor drains, or other openings which should prevent the escape of spilled or evaporating wastes.

1. Storage Ponds or Lagoons. The Plan should describe the sizes and number of storage ponds. Information should be provided to ensure that:

- Ponds are constructed of materials (natural materials or liners) compatible with the ponded wastes;
- Design of the ponds' natural or artificial liners and their leachate control provisions meet the approval of the appropriate California Regional Water Quality Control Board;
- Pond designs provide adequate freeboard and minimize bank erosion.

2. Storage Tanks. The Plan should identify the size and number of storage tanks. Information should be provided on storage tank design to ensure that:

- Tanks are constructed of materials (or protective liners) compatible with the stored wastes;

- Tanks are of sturdy and leakproof construction;
- Tanks containing volatile wastes (true vapor pressure greater than 78 mm of Hg) are not vented directly to the atmosphere and are equipped with vapor control systems as required by the local air pollution control district;
- Storage tanks holding wastes which are incompatible are either sufficiently separated from each other or are otherwise protected to prevent mixing of wastes if the tanks break or leak;
- Tanks are marked to identify their contents.

3. Nonstationary Storage Containers. The Plan should indicate the number of nonstationary containers stored (e.g., bags, bins, bottles, cans, cartons, drums). The design and construction of the container storage area (e.g., size, types of structures, and security) should be described. Information should also be provided to ensure that:

- Waste containers which are subject to deterioration are protected from the weather; and
- Waste containers holding wastes which are incompatible are sufficiently separated or protected from each other.

4. Storage of Water-Reactive Wastes. The Plan should describe the design features which provide raintight and waterproof protection for water-reactive wastes at storage facilities.

B. Treatment. The facility map should show the location of major waste-treatment units. The unit processes and capacities should be identified. The types and quantities of hazardous wastes to be treated should be described. The types of treatment processes to be used should also be described. Whenever applicable, the physical and chemical principles underlying the processes should be identified. Information should be provided on treatment unit design to ensure the following:

- The treatment units are designed so that no fugitive emissions or other unregulated discharges result;
- Treatment processes are regulated to avoid uncontrolled violent reactions or undesired reactions;
- All chemicals used to treat hazardous wastes and the sludges and effluents produced by the treatment processes are handled in a manner which prevents spills, fires, or explosions;
- Treatment units are constructed of materials compatible with the chemicals used to treat hazardous wastes and with the wastes themselves.

C. Incineration. Basic information on the type, capacity, and design of each incineration unit should be provided. The types and the physical forms (e.g., solids, liquids, slurries, sludges) to be incinerated should be listed. Information should be provided to ensure that:

- Incinerators are designed, constructed, and operated to minimize uncontrolled violent reactions, explosions, or discharges of hazardous wastes;
- Incinerators are located, designed, operated, and constructed to meet requirements of the local air pollution control district;
- Incinerators used for the destruction of compounds which form hazardous, soluble combustion products are equipped with appropriate control devices or processes;
- Incinerators are able to achieve sufficient retention times and temperatures for effective incineration of hazardous wastes.

D. Disposal. The Plan should describe each method used for hazardous waste disposal at the facility, such as land-spreading areas, solar ponds, injection wells, and containerized disposal cells. Provisions for recording the location of disposal cells for each disposal element should be identified.

1. Landspreading Areas and Disposal Lagoons. The Plan should indicate:

- Sizes and number of the areas;
- General operating practices;
- Types of wastes which are landspread;
- Features to prevent or control runoff during wet weather.

2. Disposal Wells. Information should be provided on the design of disposal wells, the quantities and types of wastes which are disposed in wells, provisions to prevent mixing of incompatible wastes, well-head safety features, and provisions for well closure and identification. If the disposal well employs refuse and general solid waste as absorbent material, the Plan should indicate:

- Methods to ensure sufficient absorbent material; and
- Controls to prevent problems, such as formation of hazardous gases.

3. Containerized-Waste Disposal Cells. The Plan should include:

- Number and location of disposal cells;
- Provisions for ensuring separation of incompatible wastes;
- Types of containerized wastes which are disposed;
- Types of liners or other barriers, if any, used in the disposal cells; and
- Cover and seepage control features.

IV. FACILITY EQUIPMENT AND DEVICES

The Plan should identify the equipment which is used at the facility to manage the hazardous wastes and provide for health protection and safety. The several categories of facility equipment covered in this section should be addressed in the Plan. The physical features of the equipment should be emphasized, although operational controls or practices should be included where appropriate to clarify uses of the equipment which provide for safe operation at the facility.

- A. Waste Handling Equipment. The Operation Plan should include a list of equipment which the facility employs to manage the wastes.

This should include a description of dozers, scrapers, trucks, pumps, pipelines, and other major pieces of waste handling equipment. Special safety features (e.g., safety windshields, spark arresters, rollover protection, fresh air supply) should be indicated. Provisions for equipment maintenance and for obtaining back-up equipment should be indicated.

Unloading Equipment. Special equipment must be provided at the facility, if needed, to prevent hazards in unloading containers of hazardous wastes (Section 66525 (e)). The Plan should describe the special equipment, such as lifts, ramps, and lines, which are used to remove containers of hazardous waste from vehicles and to handle them safely. If no such equipment is used, justification for the absence of the equipment should be given. If the equipment is not provided by the facility operator, the Plan should specify how the necessary equipment is provided (e.g., equipment is required to be supplied by haulers).

B. Safety Equipment. The Plan shall describe all safety equipment available at the facility. This should include:

- Telephone or radio for summoning aid;
- Protective clothing and equipment for employee safety including respirators, self-contained breathing apparatus, goggles, boots, etc.;

- Warning or alarm system;
- Readily available safety shower and eyewash;
- First aid supplies.

C. Security. The facility must have necessary warning signs and fences to protect the public, livestock, and wildlife (Section 66525 (h) (1)).

1. Fencing. The Plan should describe and present on the facility map the types and locations of barriers capable of preventing unauthorized entry of persons or animals to the facility. A manproof fence or the equivalent is required for readily accessible sites, whereas lesser security provisions might be appropriate for more isolated sites. The report should indicate provisions for securing all gates or other entrances when an attendant is not on duty. Any special provisions (e.g., 24-hour security personnel, etc.) should be indicated. The size, wording, and location of warning signs should be specified.
2. Warning Signs. Warning signs legible from a distance of 25 feet must be posted on access roads to hazardous waste areas of facilities which are open to the public (Section 66525 (f)).

If the facility is open to the public, the Plan should identify the locations, sizes, and wording of warning signs.

- D. Lighting. If the facility is operated during hours of darkness, there should be sufficient lighting to ensure safe, effective supervision of operations (Section 66525 (h) (2)).

The locations and types of lighting equipment should be identified if the facility is open during hours of darkness or if hazardous waste haulers are permitted access to the facility during such hours.

E. Water Supply.

1. On-site Water Supply. If an on-site water supply which is not approved for drinking purposes is used for extinguishing fires, washing equipment, or other purposes at the facility, all faucets and taps connected to that supply shall be labeled with a specifically worded warning written in English and Spanish (Section 66525 (c)).

The Plan should specify on the facility map or by description the location of all faucets and taps where a water supply unapproved for drinking is used, and specify the warning label which has been affixed to them. Any other precautions taken to prevent drinking from an unapproved water supply should be indicated.

2. Protection of Public Water Supply. If a public water supply is used at the facility, the service connection shall be protected from contamination as specified in Section 7064, Title 17, California Administrative Code (Section 66525 (d)).

The Plan must identify the types and locations of devices or facilities which prevent backflow of contaminants into the public water supply.

V. GENERAL OPERATING PROCEDURES

The Operation Plan must provide: A general description of the operational procedures to be used at the facility which will ensure compliance with the Hazardous Waste Control Regulations (Section 66376 (a) (3)); a description of procedures for receiving and identifying hazardous wastes, for deployment of qualified personnel, for supervision of handling and disposal of hazardous wastes (Section 66376 (a) (4)), and for closure of the facility if closure is expected within five years (Section 66376 (a) (5)). Whenever applicable, illustrations should be included to show the sequences and procedures used to handle and dispose of hazardous wastes.

The following operational procedures should be specifically addressed:

- A. Receipt and Identification of Hazardous Wastes. The Operation Plan must describe the procedures used at the facility for receiving

and identifying hazardous wastes. Considerations to be addressed include:

- Procedures to ensure that properly completed copies of manifests (California Liquid Waste Hauler Records) are obtained from hazardous waste haulers.
- Procedures for field sampling and testing: (a) to determine that each hazardous waste accepted is one which may be received at the facility; (b) to identify potential incompatibilities of incoming hazardous wastes; and (c) to indicate proper disposal procedures and locations in order to ensure the safe and orderly handling and disposal of the wastes.
- Procedures to ensure the presence of an attendant competent to supervise all activities during operating hours at the facility if it is open to the public.

B. Control of Wastes at the Facility. This section of the Plan should describe the procedures rather than the design elements of the facility which will:

- Prevent discharge of hazardous wastes outside designated areas of the facility (e.g., procedures for unloading wastes to ensure discharge of those wastes within the proper areas, instructions to haulers regarding disposal methods, supervision of waste handling, etc.);

- Prevent movement of discharged wastes outside of designated areas of the facility (e.g., loading limits for ponds and disposal pits, maintenance of dikes, routine inspections of storage and disposal facilities, proper covering of buried waste, erosion control, etc.);
- Prevent exposure of a person to, or contamination of a person with, hazardous wastes (e.g., procedures for use of protective clothing and devices, maintenance of wash facilities) (Sections 66530 (e) and 66530 (m));
- Prevent blowing of hazardous wastes (e.g., covering or wetting of powdered wastes); and
- Prevent production of hazardous gases, mists, or vapors (e.g., limitations on types of wastes deposited in ponds or open disposal areas).

The Plan should describe the procedures used and precautions taken for the handling and disposal of containers holding hazardous wastes to ensure that the containers do not rupture or leak (Section 66530 (h)), or cause fires, contamination of persons, or discharges of hazardous wastes. If containers are opened or emptied at the facility, the Plan should state the restrictions (e.g., the practice is limited to: opening severely damaged containers and transferring the wastes to sound containers,

opening and emptying containers of waste intended for treatment, or opening containers for necessary sampling of wastes, etc.). The procedure used for the burial of containers at the facility should be described, indicating procedures to avoid rupture of the containers or leakage of their contents (e.g., care taken in unloading, setting containers in place, placing cover, etc.). Provision of separate disposal areas for burial of containers holding incompatible wastes should be indicated.

The Plan should describe the handling and disposition of empty containers contaminated with hazardous materials (e.g., burial, incineration, rinsing and recycling, or other practices (Section 66530 (i))).

The Plan should describe procedures carried out at the facility to decontaminate equipment which might be contaminated with hazardous waste prior to being serviced or used in a nonhazardous waste area. The methods of collection and disposal of contaminated wash water should be indicated (Section 66530 (n)).

The Plan should describe general operating procedures to minimize the chance of fire or explosion at the facility (e.g., use of separate facilities for incompatible wastes, prohibition of smoking, and other precautions).

- C. Facility Closure. If closure of the facility is expected within five years, the Plan must describe the procedures planned for

closure (Section 66376 (a) (5)) which will ensure that the hazardous wastes deposited at the facility will not result in a hazard to health, domestic livestock, or wildlife. The procedures should include controls on future uses of the facility and provisions for proper closure (e.g., use of markers, remedial actions, monitoring, and any other activities which are necessary for the safe closure of the facility).

VI. PERSONNEL

The Operation Plan must describe the deployment of qualified personnel who supervise the handling and disposal of hazardous waste. The description should be sufficiently detailed to evaluate compliance with the following regulations regarding personnel.

- A. Adequate Staff. The operator shall provide a sufficient number of qualified personnel to carry out all appropriate functions at the facility (Section 66520 (a)).
- B. Training. One person should be trained and qualified to conduct field tests of wastes for pH and flammability when appropriate (Section 66520 (b)).

The Plan should describe the training provided and indicate that a qualified person is available at the facility to conduct the appropriate training.

- C. Supervision. There shall be adequate supervision of the facility to ensure that the operations conducted comply with all applicable laws and regulations (Section 66520 (c)).

The Plan should indicate the provisions for supervision at the facility and for advising DHS and local fire authorities of the names of supervisory personnel at the facility and of the addresses and telephone numbers where the personnel can be contacted.

VII. CONTINGENCY PLAN

The Operation Plan should include a contingency plan which sets forth the following:

- Actions to be taken when an accident or accidental discharge of hazardous wastes occurs;
- Equipment and manpower available for correcting effects of accidents; and
- Emergency procedures for recovering and disposing of spilled hazardous waste, for evacuation of employees, and for summoning appropriate emergency services (Section 66376 (a) (7)).

The Plan should list all persons assigned primary responsibility for coordinating emergency response measures. The means for obtaining

emergency assistance of fire, police, and medical services should be specified. The Plan should indicate that those persons who are responsible for activities set forth in the contingency plan are thoroughly familiar with: the hazardous wastes handled at the facility; the type, number, and location of emergency response resources; the general response procedures; and the details of the contingency plan. Also, the distribution of the contingency plan should be indicated.

VIII. ENVIRONMENTAL CONTROL PERMITS

Several permits which include provisions for environmental protection are generally required during the establishment of a hazardous waste facility. These include:

- Conditional land use permit;
- Regional or local air pollution control district requirements; and
- Regional Water Quality Control Board waste discharge requirements.

These permits should be identified in the Operation Plan. A permit for the facility cannot be issued by DHS unless the Regional Water Quality Control Board has established waste discharge requirements or has granted a waiver of those requirements (Section 66379 (c)).

The technical report of information developed for the Regional Water Quality Control Board should provide a substantial portion of the

information for the Plan. This information may be submitted in lieu of a separate write-up for the pertinent portions of the Plan.

IX. RECORDS AND REPORTS

Adequate records and reports are required to document that procedures conducted at the facility have complied with the Hazardous Waste Control Regulations. The Operation Plan should indicate that the following records required by the regulations are maintained and/or submitted to DHS by the operator of the facility:

- A. Information (names, addresses, and telephone numbers) regarding the waste producer, hauler, processor, and disposal site operator for each load of hazardous wastes at the facility (Section 66545 (a) (1)).
- B. Information (source, identity, composition, volume, physical state, type of container, and hazardous properties) about each load of hazardous wastes received (Section 66545 (a) (2));
- C. The processing or disposal method used for each load of hazardous waste received (Section 66545 (a) (3));
- D. The date that each load of hazardous waste was received for storage (Section 66545 (a) (4)).

(The records specified in Items A-D of Section IX (above) should be retained at the facility for one year. Copies of completed manifests may serve as the required records.)

E. Monthly reports submitted to DHS (by operators of off-site hazardous waste facilities) consisting of the following:

1. The amount of state hazardous waste disposal fees due and payable (Section 66550 (a) (1));
2. Legible copies of manifests for each load of hazardous wastes received and a summary report of the quantities of such wastes received (Section 66550 (a) (2)); and
3. The identity, source, chemical composition, weight or volume, physical state, hazardous properties, and method used to dispose of each waste received by pipeline (Section 66550 (a) (3)).

F. Monthly reports submitted to DHS (by operators of on-site hazardous waste facilities) consisting of the following:

1. A record of all hazardous wastes disposed of during the month specifying the amount, type, source, chemical composition, physical state, type of container, and hazardous properties of the wastes and the methods used for disposal of the wastes; and

2. A monthly report of state hazardous waste disposal fees due and payable to DHS.

G. Reports of accidents (submitted to DHS within 24 hours after occurrence) which could result in a hazard to public health and safety, domestic livestock or wildlife, or result in a discharge of hazardous waste outside of an area designated in the Plan.

APPENDIX G

REGULATIONS CONCERNING IDENTIFICATION, PACKAGING,
AND SHIPMENT OF HAZARDOUS MATERIALS; EXCERPTS
FROM CFR-TITLE 49, TRANSPORTATION
PARTS 171, 172, 173, AND 178

SUBCHAPTER C—HAZARDOUS MATERIALS REGULATIONS

PARTS 110-170 (RESERVED)

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

Sec. 171.1 Purpose and scope.
171.2 General transportation requirements.

171.3 (Reserved)
171.4 Changes in specifications for tank cars.

171.5 Procedure covering tank car construction.

171.6 (Reserved)

171.7 Matter incorporated by reference.

171.8 Definitions and abbreviations.

171.9 Rules of construction.

171.10 Flammable or combustible liquids in bulk on board vessels.

171.11 (Reserved)

171.12 Import and export shipments.

171.13 Emergency regulations.

171.14 Specification markings.

171.15 Immediate notice of certain hazardous materials incidents.

171.16 Detailed hazardous materials incident reports.

171.17 (Reserved)

171.18 Continuation of effectiveness of existing Bureau of Explosives registrations.

AUTHORITY: 49 U.S.C. 1803, 1804, 1805; 49 CFR 1.53(e), unless otherwise noted.

EDITORIAL NOTE: Incorporation by reference provisions approved by the Director of the Federal Register June 30, 1977, and a copy of the incorporated material filed in the Federal Register library.

EFFECTIVE DATE NOTE: At 43 FR 46643, Oct. 19, 1978, amendments were made to this Part, effective Oct. 19, 1978. At 43 FR 51020, Nov. 2, 1978, the effective date was corrected to Sept. 30, 1978.

§ 171.1 Purpose and scope.

This subchapter prescribes the requirements of the Department of Transportation governing the transportation of hazardous materials in commerce.

(Amdt. 171-32, 41 FR 18993, Apr. 15, 1976)

§ 171.2 General transportation requirements.

(a) Except as provided in § 171.12, no person may offer or accept a hazardous

material for transportation in commerce within the United States unless that material is properly classified, described, packaged, marked, labeled, and in the condition for shipment as required by this subchapter.

(b) Except as provided in § 171.12, no person may transport a hazardous material in commerce within the United States unless that material is handled and transported in accordance with this subchapter.

(c) No person may represent, mark, certify, or sell a packaging or container as meeting the requirements of this subchapter governing the use of that packaging or container in the transportation in commerce of a hazardous material unless the packaging or container is manufactured, fabricated, marked, maintained, reconditioned, or repaired, as the case may be, in accordance with this subchapter.

(Amdt. 171-32, 41 FR 18993, Apr. 15, 1976, as amended by Amdt. 171-24, 41 FR 38179, Sept. 9, 1976)

§ 171.3 (Reserved)

§ 171.4 Changes in specifications for tank cars.

(a) See § 179.4 of this subchapter.

(31 FR 9066, July 1, 1966. Redesignated at 32 FR 5606, Apr. 8, 1967, and amended by Amdt. 171-42, 43 FR 46643, Oct. 19, 1978)

§ 171.5 Procedure covering tank car construction.

(a) See § 179.3 of this subchapter.

(Order 71-31 FR 9066, July 1, 1966. Redesignated at 32 FR 5606, Apr. 8, 1967, and amended by Amdt. 171-42, 43 FR 46643, Oct. 19, 1978)

§ 171.6 (Reserved)

§ 171.7 Matter incorporated by reference.

(a) There is incorporated by reference in Parts 170-189 of this subchapter all matter referred to that is not specifically set forth. These materials are hereby made a part of the regulations in Parts 170-189 of this subchapter. Unless the reference provides otherwise, matter subject to

§ 171.7

change is incorporated only as it is in effect on the date of issuance of the regulation referring to that matter.

(b) All incorporated matter is available for inspection in the Dockets Branch, Room 6600 of the Transportation Building, 2100 Second Street SW., Washington, D.C. 20590.

(c) Matter incorporated by reference is available for distribution as follows:

(d) The full title and application of the matter incorporated by reference in Parts 170-189 of this chapter are as follows:

(1) ASME Code means sections VIII (Division I) and IX of the 1974 edition of the "American Society of Mechanical Engineers Boiler and Pressure Vessel Code," and addenda thereto through June 30, 1976.

(2) AAR Specifications for Tank Cars means the 1970 edition of the

"Association of American Railroads Specification for Tank Cars".

(3) Compressed Gas Association:

(i) CGA Pamphlet C-3 is titled, "Standards for Welding and Brazing on Thin Walled Containers," 1968 edition;

(ii) CGA Pamphlet C-6 is titled, "Standards for Visual Inspection of Compressed Gas Cylinders," 1968 edition;

(iii) Compressed Gas Association Pamphlet C-7 Appendix A is titled, "A Guide for the Precautionary Markings for Compressed Gas Containers," dated May 16, 1971, Addenda issued January 1976.

(iv) CGA Pamphlet C-8 is titled, "Standard for Requalification of DOT-3HT Cylinders," 1972 edition.

(v) CGA Pamphlet S-1.2 is titled, "Safety Relief Device Standards Part 2—Cargo and Portable Tanks for Compressed Gases," 1966 edition.

(4) American National Standards:

(i) American National Standard B9.1 is titled, "Safety Code for Mechanical Refrigeration," 1964 edition.

(ii) American National Standard B16.3 is titled, "Steel Pipe Flanges and Fittings," 1968 edition.

(iii) American National Standard N14.1 is titled, "Packaging of Uranium Hexafluoride for Transport," 1971 edition.

(5) American Society for Testing and Materials:

(i) ASTM D1310 is titled, "Standard Method of Test for Flash Point of Volatile Flammable Materials By Tag Open-Cup Apparatus," 1967 edition;

(ii) ASTM D323 is titled, "Test for Vapor Pressure of Petroleum Products (Reid Method)," 1958(68) edition.

(iii) ASTM D1056 is titled, "Sponge and Expanded Cellular Rubber Products, Spec. and Tests for," 1968 edition.

(iv) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(v) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(vi) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(vii) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(viii) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(ix) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(x) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xi) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xii) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xiii) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xiv) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xv) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xvi) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xvii) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

(xviii) ASTM G 23-69 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Carbon-Arc Type) for Exposure Testing of Materials," 1969 edition.

sure of Nonmetallic Materials," 1969 edition (reapproved 1975).

(v) ASTM G 26-70 is titled, "Standard Recommended Practice for Operating Light- and Water-Exposure Apparatus (Xenon-Arc Type) for Exposure of Nonmetallic Materials," 1970 edition.

(vi) ASTM D-438 is titled, "Test for Tensile Strength of Plastics," 1976 edition.

(vii) ASTM D-1505 is titled, "Test for Density of Plastics by the Density Gradient Technique," 1968 edition.

(8) NFPA Pamphlet No. 58 is titled, "Standard for the Storage and Handling of Liquefied Petroleum Gases," 1972 edition.

(7) Bureau of Explosives, Association of American Railroads:

(i) Bureau of Explosives Pamphlet No. 6 is titled, "Illustrating Methods for Loading and Bracing Carload and Less Than Carload Shipments of Explosives and Other Dangerous Articles," 1962 edition.

(ii) Bureau of Explosives Pamphlet No. 6A (includes appendix No. 1, October 1944, and appendix No. 2, December 1945) is titled, "Illustrating Methods for Loading and Bracing Carload and Less Than Carload Shipments of Loaded Projectiles, Loaded Bombs, Etc.," 1943 edition.

(iii) Bureau of Explosives Pamphlet No. 6C is titled, "Illustrating Methods for Loading and Bracing Trailers and Less Than Trailer Shipments of Explosives and Other Dangerous Articles Via Trailer-on-Flat-Car (TOFC) or Container-on-Flat-Car (COFC)," September 1966.

(iv) Bureau of Explosives Pamphlets 1 and 2 titled, "Emergency Handling of Hazardous Materials in Surface Transportation," June 1973.

(8) NACE Standard TM-01-69 is titled, "Test Method Laboratory Corrosion Testing of Metals for the Process Industries," 1969 edition.

(9) IME Standard is titled, "IME Standard for the Safe Transportation of Electric Blasting Caps in the Same Vehicle With Other Explosives," dated November 5, 1971 (IME Safety Library Publication No. 22).

(10) IAEA "Regulations for the Safe Transport of Radioactive Materials".

1967 Edition and 1973 Revised Edition, Safety Series, No. 8.

(11) United States Atomic Energy Commission (USAEC):

(i) Title 10, Code of Federal Regulations, Part 71 is titled, "Packaging of Radioactive Materials for Transport and Transportation of Radioactive Materials Under Certain Conditions."

(12) U.S. Department of Commerce, National Bureau of Standards Handbook H28 (1957)—Part II is titled, "Screw-Thread Standards for Federal Services 1957," December 1966 edition.

(13) National Wooden Box Association's Specification 1-1B is titled, "Specifications for Nailed Wooden and Lock Corner Boxes for Industrial Use," May 1968. Amended in part October 1961.

(14) American Water Works Association (AWWA) Standard C207-55 is titled, "AWWA Standard for Steel Pipe Flanges," 1955 edition.

(15) American Welding Society (AWS):

(i) AWS Code B-3.0 is titled, "Standard Qualification Procedure," 1972 edition.

(ii) AWS Code D-1.0 is titled, "Code for Welding in Building Construction," 1966 edition.

(16) USDC, CAPE-1662, one of the series of "Civilian Applications Program Engineering Drawings" which is a package of information including drawings and bills of material, describing phenolic-foam insulated, protective overpacks.

(i) USDC, USAEC Material and Equipment Specification No. SF-9, is titled, "Fire Resistant Phenolic Foam."

(ii) USDC, ORO-051 is titled, "Uranium Hexafluoride Handling Procedures and Container Criteria," Revision 3, 1972 edition.

(17) "International Maritime Dangerous Goods Code," volumes I, II, III, and IV, 1977 edition.

(18) "Uniform Freight Classification 11."

(19) General Services Administration, Federal Specification RTR-C-901b is titled "Cylinders, Compressed Gas: With Valve or Plug and Cap: ICC 3AA," August 1, 1967.

(c) Matters referenced by footnote are included as part of the regulations of this subchapter.

(Amend. 171-4, 34 FR 18247, Nov. 14, 1969)

Note: For amendments to § 171.7 see list of CFR sections in back of this volume.

§ 171.8 Definitions and abbreviations.

In this subchapter,

"Approved" means approval issued or recognized by the Department unless otherwise specifically indicated in this subchapter.

"Away from" See § 176.83.

"Barge" means a non-self-propelled vessel.

"Bottle" means a container having a neck of relatively smaller cross section than the body and an opening capable of holding a closure for retention of the contents.

"Break-bulk" means packages of hazardous materials that are handled individually, palletized, or unitized for purposes of transportation as opposed to bulk and containerized freight.

"Bureau of Explosives" means the Bureau of Explosives (B of E) of the Association of American Railroads.

"C" means Celsius or Centigrade.

"Captain of the Port" means the Officer of the Coast Guard, under the command of a District Commander, so designated by the Commandant for the purpose of giving immediate direction to Coast Guard law enforcement activities within his assigned area or with respect to remaining areas in his District not assigned to officers designated by the Commandant, the District Commander.

"Carfloat" means a vessel that operates on a short run on an irregular basis and serves one or more points in a port area as an extension of a rail line or highway over water, and does not operate in ocean, coastwise, or ferry service.

"Cargo-only aircraft" means an aircraft that is used to transport cargo and is not engaged in carrying passengers.

"Cargo tank" means any tank permanently attached to or forming a part of any motor vehicle or any bulk liquid or compressed gas packaging not permanently attached to any motor vehicle which by reason of its

Chapter I—Research and Special Programs Administration

§ 171.8

size, construction, or attachment to a motor vehicle, is loaded or unloaded without being removed from the motor vehicle. Any packaging fabricated under specifications for cylinders is not a cargo tank.

"Cargo vessel" means: (1) Any vessel other than a passenger vessel; and

(2) Any ferry being operated under authority of a change of character certificate issued by a Coast Guard Officer-in-Charge, Marine Inspection.

"Carrier" means a person engaged in the transportation of passengers or property by:

(1) Land or water, as a common, contract, or private carrier, or

(2) Civil aircraft.

"CC" means closed-cup.

"Character of vessel" means the type of service in which the vessel is engaged at the time of carriage of a hazardous material.

"Civil aircraft" means aircraft other than public aircraft.

"Class A explosives" See § 173.53.

"Class B explosives" See § 173.58.

"Class C explosives" See § 173.100.

"COC" means container-on-flat-car.

"Combustible liquid" See § 173.115.

"Compressed gas" See § 173.309.

"Consumer commodity" means a material that is packaged and distributed in a form intended or suitable for sale through retail sales agencies or individuals for purposes of personal care or household use. This term also includes drugs and medicines.

"Containership" means a cargo vessel designed and constructed to transport, within specifically designed cells, portable tanks and freight containers which are lifted on and off with their contents intact.

"Corrosive material" See § 173.240.

"Crewmember" means a person assigned to perform duty in an aircraft during flight time.

"Cylinder" means a pressure vessel designed for pressures higher than 40 psia and having a circular cross section. It does not include a portable tank, multi-unit tank car tank, cargo tank, or tank car.

"District Commander" means the District Commander of the Coast

Guard, or his authorized representative, who has jurisdiction in the particular geographical area.

"DOD" means the U.S. Department of Defense.

"Engine" means a locomotive propelled by any form of energy and used by a railroad.

"Etiologic agent" See § 173.386.

"F" means degree Fahrenheit.

"Ferry vessel" means a vessel which is limited in its use to the carriage of deck passengers or vehicles or both, operates on a short run on a frequent schedule between two points over the most direct water route, other than in ocean or coastwise service, and is offered as a public service of a type normally attributed to a bridge or tunnel.

"Flammable gas" See § 173.306(b).

"Flammable liquid" See § 173.115 (a)(1).

"Flammable solid" See § 173.150.

"Flash point" means the minimum temperature at which a substance gives off flammable vapors which in contact with spark or flame will ignite. For liquids, see § 173.115 and for solids, see § 173.150.

"Freight container" means a reusable container having a volume of 64 cubic feet or more, designed and constructed to permit being lifted with its contents intact and intended primarily for containment of packages (in unit form) during transportation.

"Fuel tank" means a tank other than a cargo tank, used to transport flammable or combustible liquid, or compressed gas for the purpose of supplying fuel for propulsion of the transport vehicle to which it is attached, or for the operation of other equipment on the transport vehicle.

"Full load" applies only to radioactive materials. See § 173.389 of this subchapter for its definition.

"Gross weight" means the weight of a packaging plus the weight of its contents.

"Hazardous material" means a substance or material which has been determined by the Secretary of Transportation to be capable of posing an unreasonable risk to health, safety, and property when transported in commerce, and which has been so designated.

Title 49—Transportation

§ 171.8

under the direction and supervision of the MTB).

"Name of contents" means the proper shipping name as specified in § 172.101.

"Navigable waters" means the navigable waters of the United States, its territories, and possessions, but does not include the navigable waters of the Panama Canal Zone.

"Net weight" means a measure of weight referring only to the contents of a package, and does not include the weight of any packaging material.

"N.O.S." means not otherwise specified.

"NRC (non-reusable container)" means a container whose reuse is restricted in accordance with the provisions of § 173.28.

"Occupied caboose" means a rail car being used to transport non-passenger personnel.

"Officer in Charge, Marine Inspection" means a person from the civilian or military branch of the Coast Guard designated as such by the Commandant and who under the supervision and direction of the Coast Guard District Commander is in charge of a designated inspection zone for the performance of duties with respect to the enforcement and administration of Title 52, Revised Statutes, acts amendatory thereof or supplemental thereto, rules and regulations thereunder, and the inspection required thereby.

"Operator" means a person who controls the use of an aircraft, vessel, or vehicle.

"Organic peroxide" See § 173.151.

"ORM" means Other Regulated Materials.

"Outside container" means the outermost enclosure used in transporting a hazardous material other than a freight container.

"Overpack" means an enclosure not intended for reuse that is used by a single consignor to consolidate two or more packages for convenience in handling.

"Oxidizer" or "Oxidizing material" See § 173.151.

"Package" or "Outside Package" means a packaging plus its contents.

"Packaging" means the assembly of one or more containers and any other

"Hermelically sealed" means closed by fusion, gasketing, crimping, or equivalent means so that no gas or vapor can enter or escape.

"IATA" means International Air Transport Association.

"IMCO" means Inter-governmental Maritime Consultative Organization.

"Intermodal container" means a freight container designed and constructed to permit it to be used interchangeably in two or more modes of transport.

"Irritating material" See § 173.381.

"Limited quantity" when specified as such in a section applicable to a particular material with the exception of Poison B materials, means the maximum amount of a hazardous material for which there is a specific labeling and packaging exception.

"Magnetic materials" See § 173.1030.

"Magazine vessel" means a vessel used for the receiving, storing, or dispensing of explosives.

"Marking" means applying the descriptive name, instructions, cautions, weight, or specification marks or combination thereof required by this subchapter to be placed upon outside containers of hazardous materials.

"Mixture" means a material composed of more than one chemical compound or element.

"Mode" means any of the following transportation methods: rail, highway, air, or water.

"Motor vehicle" includes a vehicle, machine, tractor, trailer, or semitrailer, or any combination thereof, propelled or driven by mechanical power and used upon the highways in the transportation of passengers or property. It does not include a vehicle, locomotive, or car operated exclusively on a rail or trolley bus operated by electric power derived from a fixed overhead wire, furnishing local passenger transportation similar to street-railway service.

"MTB" means the Materials Transportation Bureau, U.S. Department of Transportation, Washington, D.C. 20590.

"MTB-TSC" means the Transportation Systems Center, Cambridge, Mass. 02142 (for functions performed

56

components necessary to assure compliance with the minimum packaging requirements of this subchapter and includes containers (other than freight containers or overpacks), portable tanks, cargo tanks, tank cars, and multi-unit tank car tanks.

"Passenger" (with respect to vessels and for the purposes of Part 176 only) means a person being carried on a vessel other than—

- (1) The owner or his representative;
- (2) The operator;
- (3) A bona fide member of the crew engaged in the business of the vessel who has contributed no consideration for his carriage and who is paid for his services; or
- (4) A guest who has not contributed any consideration directly or indirectly for his carriage.

"Passenger-carrying aircraft" means an aircraft that carries any person other than a crewmember, company employee, an authorized representative of the United States, or a person accompanying the shipment.

"Passenger vessel" means—(1) A vessel subject to any of the requirements of the International Convention for the Safety of Life at Sea, 1980, which carries more than 12 passengers;

(2) A cargo vessel documented under the laws of the United States and not subject to the Convention, which carries more than 16 passengers;

(3) A cargo vessel of any foreign nation that extends reciprocal privileges and is not subject to the Convention and which carries more than 16 passengers; and

(4) A vessel engaged in a ferry operation and which carries passengers.

"Person" means an individual, firm, co-partnership, corporation, company, association, or joint-stock association, and includes any trustee, receiver, assignee, or personal representative thereof.

"Placarded car" means a rail car which is placarded in accordance with the requirements of Part 172 of this subchapter except those cars displaying only the FUMIGATION placards as required by § 172.510.

"Poison A" See § 172.326.

"Poison B" See § 172.326.

"Portable tank" means any packaging (except a cylinder having a 1000-pound or less water capacity) over 110 U.S. gallons capacity and designed primarily to be loaded into or on or temporarily attached to a transport vehicle or ship, and equipped with skids, mounting, or accessories to facilitate handling of the tank by mechanical means. It does not include any cargo tank, tank car tank, tank of the DOT-106A or 110A type, or tankers carrying 3AX, 3AAX, or 3T cylinders.

"Private track" or "Private siding" means track located outside of a carrier's right-of-way, yard, or terminals where the carrier does not own the rails, ties, roadbed, or right-of-way and includes track or portion of track which is devoted to the purpose of its user either by lease or written agreement, in which case the lease or written agreement is considered equivalent to ownership.

"Proper shipping name" means the name of the hazardous material shown in Roman print (not italics) in § 172.101 of this subchapter.

"P.s.i.a. or psia" means pounds per square inch absolute.

"P.s.i.g. or psig" means pounds per square inch gauge.

"Public aircraft" means an aircraft used only in the service of a government or political subdivision. It does not include a government-owned aircraft engaged in carrying passengers or property for commercial purposes.

"Public vessel" means a vessel owned by and being used in the public service of the United States. It does not include a vessel owned by the United States and engaged in a trade or commercial service or a vessel under contract or charter to the United States.

"Pyrophoric liquid" See § 173.115.

"Pyrophoric solid" See § 173.115.

"Radioactive materials" See § 173.389.

"Railroad" means a person engaged in transportation by rail.

"Rail freight car" means a car designed to carry freight or non-passenger personnel by rail, and includes a box car, flat car, gondola car, hopper car, tank car, and occupied caboose.

"Research" means investigation of experimentation aimed at the discovery

ery of new theories or laws and the discovery and interpretation of facts or revision of accepted theories or laws in the light of new facts.

"Separated by a complete hold or compartment from" See § 176.83.

"Separated from" See § 176.83.

"Separated longitudinally by a complete hold or compartment from" See § 176.83.

"Sheathing" means a covering consisting of a smooth layer of wood placed over metal and secured to prevent any movement.

"Shipping paper" means a shipping order, bill of lading, manifest or other shipping document serving a similar purpose and containing the information required by §§ 172.202, 172.203 and 172.204.

"STC (single-trip container)" means a container that may not be refilled and reshipped after having been previously emptied, except as provided in § 173.28.

"Solution" means any homogeneous liquid mixture of two or more chemical compounds or elements that will not undergo any segregation under conditions normal to transportation.

"Spontaneously combustible material (solid)" means a solid substance (including sludges and pastes) which may undergo spontaneous heating or self-ignition under conditions normally incident to transportation or which may upon contact with the atmosphere undergo an increase in temperature and ignite.

"Stowage" means the act of placing hazardous materials on board a vessel.

"Strong outside container" means the outermost enclosure which provides protection against the unintentional release of its contents under conditions normally incident to transportation.

"Technical name" means a recognized chemical name currently used in scientific and technical handbooks, journals, and texts. Generic descriptions authorized for use as technical names are, Organic phosphate compound, Organic phosphorus compound, Organic phosphorus mixture, Organic phosphorus compound mixture, Methyl parathion, and Parathion.

"TOPC" means trailer-on-flat-car.

"Trailer" means a vessel other than a carfloat, specifically equipped to handle highway vehicles, and fitted with installed securing devices to tie down each vehicle.

"Train" means one or more engines coupled with one or more rail cars, except during switching operations or where the operation is that of classifying and assembling rail cars within a railroad yard for the purpose of making or breaking up trains.

"Trainship" means a vessel other than a rail car ferry or carfloat, specifically equipped to transport railroad vehicles, and fitted with installed securing devices to tie down each vehicle.

"Transport vehicle" means a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle.

"UPC" means Uniform Freight Classification.

"United States" means the fifty States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, or Guam.

"Vessel" includes every description of watercraft, used or capable of being used as a means of transportation on the water.

"Viscous liquid" means a liquid material which has a measured viscosity in excess of 2500 centistokes at 25° C (77° F) when determined in accordance with the procedures specified in ASTM Method D 445-72 "Kinematic Viscosity of Transparent and Opaque Liquids (and the Calculation of Dynamic Viscosity)" or ASTM Method D 1200-70 "Viscosity of Paints, Varnishes, and Lacquers by Ford Viscosity Cup."

"Volatility" refers to the relative rate of evaporation of materials to assume the vapor state.

"Water reactive material (solid)" means any solid substance (including sludges and pastes) which, by interaction with water, is likely to become spontaneously flammable or to give off flammable or toxic gases in dangerous quantities.

Chapter I—Research and Special Programs Administration

§ 171.12

"Water resistant" means having a degree of resistance to permeability by and damage caused by water in liquid form.

"W.T." means watertight.

Amdt. 171-32, 41 FR 15994, Apr. 15, 1976, as amended by Amdt. 171-34, 41 FR 38179, Sept. 9, 1976; Amdt. 171-32A, 41 FR 40630, Sept. 20, 1976; Amdt. 171-32B, 41 FR 57020, Dec. 30, 1976; Amdt. 171-41, 43 FR 36446, Oct. 17, 1978; Amdt. 171-42, 43 FR 48643, Oct. 19, 1978)

§ 171.9 Rules of construction.

(a) In this subchapter, unless the context requires otherwise: (1) Words imparting the singular include the plural;

(2) Words imparting the plural include the singular; and

(3) Words imparting the masculine gender include the feminine;

(b) In this subchapter, the word: (1) "Shall" is used in an imperative sense;

(2) "Must" is used in an imperative sense;

(3) "Should" is used in a recommendationary sense;

(4) "May" is used in a permissive sense to state authority or permission to do the act described, and the words "no person may . . ." or "a person may not . . ." means that no person is required, authorized, or permitted to the act described; and

(5) "Includes" is used as a word of inclusion not limitation.

Amdt. 171-32, 41 FR 15996, Apr. 15, 1976, as amended by Amdt. 171-32A, 41 FR 40630, Sept. 20, 1976)

§ 171.10 Flammable or combustible liquids in bulk on board vessels.

(a) Nothing in Parts 170-189 of this subchapter shall be construed as affecting the transportation of flammable or combustible liquids in bulk on board vessels which transportation is governed by the rules and regulations promulgated under R.S. 4417a; 46 U.S.C. 391a (46 CFR Part 146).

(29 FR 18653, Dec. 29, 1964. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by Amdt. 171-42, 43 FR 48643, Oct. 19, 1978)

§ 171.11 (Reserved)

§ 171.12 Import and export shipments.

(a) Except in the case of a shipment from Canada conforming to § 173.8, each person importing a hazardous material into the United States shall provide the shipper and the forwarding agent at the place of entry into the United States timely and complete information as to the requirements of this subchapter that will apply to the shipment of the material within the United States. The shipper, directly or through the forwarding agent at the place of entry, shall provide the initial carrier in the United States the certificate of compliance required by § 172.204. The carrier may not accept the material for transportation unless the required certification is provided.

(b) The requirements of § 171.2 with respect to classification and labeling notwithstanding, a hazardous material (other than Class A explosives or radioactive materials) which is classified and labeled in accordance with the IMCO Code and being imported into or exported from the United States or passing through the United States in the course of being shipped between places outside the United States may be offered and accepted for transportation and transported within the United States if it is otherwise offered, accepted, and transported in accordance with this subchapter. When a material is transported within the United States by air, highway, or rail under an IMCO class, the entry on the shipping paper required by § 172.202(a)(2) must include a class set forth in this subchapter that most appropriately corresponds to the IMCO class. For example, according to IMCO, the description and class for ethylene oxide is "Ethylene Oxide, 2" or "Ethylene Oxide, Gas 2." While ethylene oxide in domestic transportation would be classed a flammable liquid, the class in this subchapter that most appropriately corresponds to the IMCO class is "flammable gas". The proper entry would therefore be "Ethylene Oxide, Flammable Gas" or "Ethylene Oxide, 2 Flammable Gas".

(c) The requirements of § 171.2 with respect to specification identification

§ 171.13

markings on packages notwithstanding, a package of hazardous materials (other than a compressed gas cylinder or a package of more than 110 gallons capacity) being imported into or exported from the United States or passing through the United States in the course of being shipped between places outside the United States may be offered and accepted for transportation and transported within the United States if the package specification identification markings required by Part 178 are clearly and legibly displayed on the surface of the package or on decals or tags securely affixed to the package, and the package is otherwise offered, accepted, and transported in accordance with this subchapter.

(d) Section 171.2 notwithstanding, a hazardous material (other than an explosive or a radioactive material) being imported into or exported from the United States or passing through the United States in the course of being shipped between places outside the United States may be offered and accepted for transportation and transported within a single port area (including contiguous harbors) when packaged, marked, classed and labeled in accordance with the IMCO Code, if the hazardous material is offered and accepted in accordance with the requirements of Subparts C and F of Part 172 of this subchapter pertaining to shipping papers and placarding. (See § 176.11 for exceptions applicable to vessels.)

(e) Notwithstanding the quantity limitations of § 173.389 (c) and (1) of this subchapter, any package of radioactive materials (except for fissile radioactive materials or Type B quantities under § 173.383b of this subchapter) which otherwise conform to the requirements of this subchapter applicable to Type A quantities or low specific activity materials may be offered and accepted for transportation and transported within the United States if—

(1) The package is being imported into the United States, or is passing through in the course of being shipped between places outside the United States;

Title 49—Transportation

(2) The country of origin has adopted the Type A quantity limitations and low specific activity materials definition set forth in the IAEA Regulations for the Safe Transport of Radioactive Materials, 1973 Revised Edition; and

(3) The contents of the package have been limited as a Type A quantity or a low specific activity material in accordance with the IAEA Type A quantity limitations and low specific activity materials definition adopted by the originating country.

(Amdt. 171-32, 41 FR 15996, Apr. 15, 1976, as amended by Amdt. 171-32A, 41 FR 40630, Sept. 20, 1976; Amdt. 171-38, 43 FR 10918, Mar. 16, 1978)

§ 171.13 Emergency regulations.

(a) Until further order of the Department, shipments of explosives may be made upon requests of the Departments of the Army, Navy, and Air Force of the United States Government complying with the following:

(1) Shippers' and carriers' regulations: handling detonating agents and explosives and explosive ammunition in same car or vehicle. Detonating fuzes, class A explosives, primer-detector assemblies or other detonating elements containing explosive components, if of a safe type, may be shipped either assembled in bombs, depth charges, mines, projectiles, or torpedoes (torpedo warheads) or in properly packed containers in the same car or vehicle with bombs, depth charges, mines, projectiles, boosters, or torpedoes (torpedo warheads) when separated from the explosive bombs, depth charges, mines, projectiles, boosters, or torpedoes (torpedo warheads) by not less than 3 feet. The intervening space of 3 feet must be filled with dry sand or dry earth in bags or in a crib so constructed or lined as to prevent sifting of the sand or earth. The crib must be secured against movement.

(2) When bomb fuzes are packed with bomb fin assemblies, either crated or boxed in wooden or metal containers, the sand or earth filled space between bombs and the fuzes may be omitted provided adequate blocking and bracing is supplied to

Chapter I—Research and Special Programs Administration

§ 171.16

prevent the bombs from crushing and injuring the detonating fuzes due to ordinary shocks incident to transportation.

(29 FR 16663, Dec. 29, 1964. Redesignated at 32 FR 8606, Apr. 3, 1967)

§ 171.14 Specification markings.

(a) Notwithstanding any other requirements of Parts 170-189 of this subchapter, the letters "ICC" may continue to be placed on any packaging requiring specification markings until January 1, 1970.

(b) Packagings with the specification markings "ICC" placed thereon before January 1, 1970, may be continued in service as marked.

(Amdt. 171-2, 33 FR 17918, Dec. 3, 1968, as amended by Amdt. 171-42, 43 FR 48643, Oct. 19, 1978)

§ 171.15 Immediate notice of certain hazardous materials incidents.

(a) At the earliest practicable moment, each carrier who transports hazardous materials shall give notice in accordance with paragraph (b) of this section after each incident that occurs during the course of transportation (including loading, unloading and temporary storage) in which as a direct result of hazardous materials—

- (1) A person is killed;
 - (2) A person receives injuries requiring hospitalization;
 - (3) Estimated carrier or other property damage exceeds \$50,000;
 - (4) Fire, breakage, spillage, or suspected radioactive contamination occurs involving shipment of radioactive material. (See also §§ 174.45, 175.45, 176.45, and 177.507 of this subchapter); or
 - (5) Fire, breakage, spillage, or suspected contamination occurs involving shipment of etiologic agents; or
 - (6) A situation exists of such a nature that, in the judgment of the carrier, it should be reported in accordance with paragraph (b) of this section even though it does not meet the criteria of paragraph (a)(1), (2), or (3) of this section; e.g., a continuing danger of life exists at the scene of the incident.
- (b) Each notice required by paragraph (a) of this section shall be given

the Department by telephone at Area Code (202) 426-1830. Notice involving etiologic agents may be given the Director, Center for Disease Control, U.S. Public Health Service, Atlanta, Ga., Area Code (404) 633-5313. In place of the notice to the Department, each notice must include the following information:

- (1) Name of reporter.
- (2) Name and address of carrier represented by reporter.
- (3) Phone number where reporter can be contacted.
- (4) Date, time, and location of incident.
- (5) The extent of injuries, if any.
- (6) Classification, name, and quantity of hazardous materials involved, if such information is available.
- (7) Type of incident and nature of hazardous material involvement and whether a continuing danger to life exists at the scene.

(c) Each carrier making a report under this section shall also make the report required by § 171.16.

(Amdt. 171-7, 35 FR 16837, Oct. 2, 1970, as amended by Amdt. 171-13, 36 FR 21201, Nov. 4, 1971; Amdt. 171-16, 36 FR 8162, Mar. 20, 1973; Amdt. 171-32B, 41 FR 67020, Dec. 30, 1976)

§ 171.16 Detailed hazardous materials incident reports.

(a) Each carrier who transports hazardous materials shall report in writing in duplicate on DOT Form F 5800.1¹ to the Department within 15 days of the date of discovery, each incident that occurs during the course of transportation (including loading, unloading, or temporary storage) in which, as a direct result of the hazardous materials, any of the circumstances set forth in § 171.15(a) occurs or there has been an unintentional release of hazardous materials from a package (including a tank).

(b) Each carrier making a report under this section shall send that report to the Associate Director for Hazardous Materials Regulation, Department of Transportation, Washington, D.C. 20590.

¹Filed as part of the original document.

§ 171.18

(Amdt. 171-7, 35 FR 16837, Oct. 2, 1970, as amended by Amdt. 171-42, 43 FR 48643, Oct. 19, 1978)

§ 171.17 (Reserved)

§ 171.18 Continuation of effectiveness of existing Bureau of Explosives regulations.

A registration filed with the Bureau of Explosives in compliance with a requirement of this subchapter, which is valid at the time that registration function is assumed by the MTB or MTB-TSC, remains valid to the same extent as if it had been filed originally with MTB or MTB-TSC.

(Amdt. 171-41, 43 FR 36446, Aug. 17, 1978)

PART 172—HAZARDOUS MATERIALS TABLE AND HAZARDOUS MATERIALS COMMUNICATIONS REGULATIONS

Subject A—General

Sec. 172.1 Purpose and scope.
172.3 Applicability.

Subject B—Table of Hazardous Materials, Their Description, Proper Shipping Name, Class, Label, Packaging, and Other Requirements

172.100 Purpose and use of the table.
172.101 Hazardous Materials Table.

Subject C—Shipping Papers

172.200 Applicability.
172.201 General entries.
172.202 Description of hazardous material on shipping papers.
172.203 Additional description requirements.
172.204 Shipper's certification.

Subject D—Marking

172.300 General marking requirements.
172.302 Export shipments by water.
172.304 Marking requirements.
172.306 Consignee's or consignor's name and address.
172.308 Authorized abbreviations.
172.310 Radioactive materials.
172.312 Liquid hazardous materials.
172.316 Packagings containing material classed as ORM.
172.326 Portable tanks.
172.328 Cargo tanks.
172.330 Tank cars.

Title 49—Transportation

Subject E—Labeling

Sec. 172.400 General labeling requirements.
172.401 Prohibited labeling.
172.402 Additional labeling requirements.
172.403 Radioactive material.
172.404 Labels for mixed and consolidated packaging.
172.405 Authorized label modifications.
172.406 Placement of labels.
172.407 Label specifications.
172.411 EXPLOSIVE A, EXPLOSIVE B, AND EXPLOSIVE C labels.
172.415 NON-FLAMMABLE GAS label.
172.416 POISON GAS label.
172.417 FLAMMABLE GAS label.
172.419 FLAMMABLE LIQUID label.
172.420 FLAMMABLE SOLID label.
172.422 SPONTANEOUSLY COMBUSTIBLE label.
172.423 DANGEROUS WHEN WET label.
172.426 OXIDIZER label.
172.427 ORGANIC PEROXIDE label.
172.430 POISON label.
172.432 IRRITANT label.
172.436 RADIOACTIVE WHITE-I label.
172.438 RADIOACTIVE YELLOW-II label.
172.440 RADIOACTIVE YELLOW-III label.
172.442 CORROSIVE label.
172.444 ETIOLOGIC AGENT label.
172.446 MAGNETIZED MATERIAL label.
172.448 CARGO AIRCRAFT ONLY label.
172.450 EMPTY label.

Subject F—Placarding

172.500 Applicability of placarding requirements.
172.502 Prohibited placarding.
172.504 General placarding requirements.
172.506 Providing and affixing placards: Highway.
172.508 Providing and affixing placards: Rail.
172.510 Special placarding provisions: Rail.
172.512 Freight container.
172.514 Cargo tanks and portable tanks.
172.516 Visibility and display of placards.
172.519 General specifications for placards.
172.521 DANGEROUS placard.
172.522 EXPLOSIVES A placard.
172.524 EXPLOSIVES B placard.
172.525 Standard requirements for the EMPTY placard.
172.527 Background requirements for certain placards on rail cars.
172.528 NON-FLAMMABLE GAS placard.
172.530 OXYGEN placard.
172.532 FLAMMABLE GAS placard.
172.536 CHLORINE placard.
172.540 POISON GAS placard.
172.542 FLAMMABLE placard and modification.

Chapter I—Research and Special Programs Administration

§ 172.100

Sec. 172.944 COMBUSTIBLE placard and modification.
172.946 FLAMMABLE SOLID placard.
172.948 FLAMMABLE SOLID W placard.
172.950 OXIDIZER placard.
172.952 ORGANIC PEROXIDE placard.
172.954 POISON placard.
172.956 RADIOACTIVE placard.
172.958 CORROSIVE placard.

Appendix A—Office of Hazardous Materials Operations Color Tolerance Charts
Appendix B—Dimensional specification for placards
Appendix C—Dimensional specifications for recommended placard holder
AUTHORITY: 49 U.S.C. 1803, 1804; 49 CFR 1.53(c), unless otherwise noted.

EDITORIAL NOTE: Incorporation by reference provisions approved by the Director of the Federal Register June 30, 1977, and a copy of the incorporated material filed in the FEDERAL REGISTER library.
EFFECTIVE DATE NOTE: At 43 FR 48642, Oct. 19, 1978, amendments were made to this Part, effective Oct. 19, 1978. At 43 FR 81020, Nov. 2, 1978, the effective date was corrected to Sept. 30, 1978.

Subpart A—General

§ 172.1 Purpose and scope.

This Part lists and classifies those materials which the Department of Transportation has designated as hazardous materials for purposes of transportation and prescribes the requirements for shipping papers, package marking, labeling, and transport vehicle placarding applicable to the shipment and transportation of those hazardous materials.

(Amdt. 172-29, 41 FR 15997, Apr. 16, 1976)

§ 172.3 Applicability.

- (a) This Part applies to—(1) Each person who offers a hazardous material for transportation, and
- (2) Each carrier by air, highway, rail, or water who transports a hazardous material.
- (b) When a person, other than one of those provided for in paragraph (a) of this section, performs a packaging labeling or marking function required by this part, that person shall perform the function in accordance with this Part.

63

§ 172.100

pling name to describe a particular material, if the correct technical name of that material is not shown, or is not appropriate, selection must be made from the general descriptions or n.o.s. entries corresponding to the specific hazard class of the material being shipped. The name that more appropriately describes the commodity must be used, i.e., an alcohol must be shipped as an alcohol n.o.s. rather than a flammable liquid n.o.s. unless the technical name of the alcohol is listed (methyl alcohol). Some mixtures may be more aptly described by their application such as: "Compound, cleaning liquid" or "Compound, rust removing," rather than "Corrosive liquid n.o.s." For materials that meet the definition of more than one hazard class, the hazard class must be determined by using the precedence given in § 173.2 of this subchapter. If it is believed that an adequate description of a material is not given in § 172.101, the Office of Hazardous Materials Regulation should be contacted for clarification.

(1) Shipping names may be used in the singular or plural in either capital or lower case letters.

(2) The words in italics are not part of the proper shipping name but may be used in addition to the proper shipping name. The word "or" in italics indicates that any terms in the sequence may be used as the proper shipping name as appropriate.

(3) The abbreviation "n.o.s." which means "not otherwise indexed" or "n.o.i.h.n." which means "not otherwise indexed by name" may be used interchangeably with "n.o.s."

(4) When qualifying words are used as part of the proper shipping name, their sequence on package markings and shipping paper descriptions is optional.

(5) When one entry references another entry by use of a "see", if both names are in Roman type, either name may be used as a proper shipping name (e.g. Isopropanol see Alcohol, n.o.s.).

(6) When a shipping name includes a concentration range as part of the shipping description, the actual concentration being shipped, if it is within

Title 49—Transportation

the range stated, may be used in place of the concentration range. For example: Hydrogen peroxide solution (8% to 40% peroxide) may be shipped described as "Hydrogen peroxide solution, 30% peroxide," or "30% Hydrogen peroxide solution."

(7) The use of the prefix "mono" is optional in any shipping name when appropriate. Thus, monochloroamine may be used interchangeably with ethanochloramine. In the "trichloro-mono-fluoromethane" the term "mono" is considered as a prefix to the term "fluoromethane."

(d) Column 3 contains a designation of the hazard class corresponding to each proper shipping name or the word "Forbidden." A material for which the class entry is "Forbidden" must not be offered or accepted for transportation. When re-evaluation of test data or new test data indicates a need to modify the hazard class or labels specified for a material specifically identified in § 172.101, these data shall be reported to the Office of Hazardous Materials Regulation.

(e) Column 4 specifies the labels required to be applied to each outside packaging, subject to the additional labeling requirements in § 172.402.

(f) Column 5 references the applicable packaging section of Part 173. Exemptions from some of the requirements of this subchapter are noted in column 5(a). References to specific packaging requirements and exemptions other than those specified in 5(a) are noted in column 5(b).

(g) Column 6 indicates the maximum net quantity in one package for air transportation or passenger railcar;

(1) Column 6(a) specifies the maximum net quantity permitted in one package for passenger-carrying aircraft or passenger railcar. For air transportation, any material forbidden on passenger-carrying aircraft but permitted on cargo aircraft, or which exceeds the maximum quantity authorized on passenger-carrying aircraft, must be shipped by cargo-only aircraft and bear the CARGO AIRCRAFT ONLY label as described in § 172.448.

(2) Column 6(b) lists the maximum net quantity for one outside package on cargo aircraft. Packaging must bear

64

the CARGO AIRCRAFT ONLY label when the quantity of hazardous material exceeds that authorized on passenger-carrying aircraft, or is forbidden on passenger-carrying aircraft.

(3) For flammable liquids, the net quantity limitation for carriage aboard a passenger-carrying aircraft or railcar is one gallon per package, and for cargo-only aircraft is 55 gallons per package, if:

(i) The material has a flash point of 73° F. or higher;

(ii) The material does not meet the definition of any other hazard class as defined in this Part; and

(iii) The flash point, or an indication that the flash point is 73° F. or higher, is marked on the outside package.

(h) Column 7 specifies each of the authorized locations on board cargo vessels and passenger vessels and certain additional requirements for shipments of each listed hazardous material. Section 176.03 of this subchapter sets forth the physical requirements for each of the authorized locations listed in Column 7. (For bulk shipments by water see 46 CFR Parts 30 to 40, 48, 64, 70, 98, 148, 151, and 154.)

(i) "1" means the material may be stowed "on deck" subject to the requirements of § 176.03(b) of this subchapter. When both "on deck" and "under deck" are authorized, "under deck" should be used if it is available.

(2) "2" means the material may be stowed "under deck" in a compartment or hold subject to the requirements of § 176.03(c). When both "on deck" and "under deck" are authorized, "under deck" should be used if it is available.

(3) "3" means the material may be stowed "under deck away from heat" in a ventilated compartment or hold subject to the requirements of § 176.03(d) of this subchapter.

(4) "4" means the material is authorized to be transported in only the limited quantities specified in the CFR section listed in Column 5 and is subject to the stowage requirements specified for a cargo vessel for the same material.

(5) "5" means the material is forbidden and may not be offered or accepted for transportation.

(6) "6" means the material is authorized to be transported in a magazine subject to the requirements of §§ 176.135 through 176.144 of this subchapter.

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53(c))

(Amdt. 172-20, 41 FR 18906, Apr. 15, 1976, as amended by Amdt. 172-20-A, 41 FR 40630, Sept. 20, 1976; Amdt. 172-20-B, 41 FR 57020, Dec. 30, 1976; Amdt. 172-28, 42 FR 57854, Nov. 7, 1977; Amdt. 172-46, 43 FR 48643, Oct. 19, 1978)

GENERAL INSTRUCTIONS FOR 172.101
HAZARDOUS MATERIALS TABLE

Example: Hazardous Material - Alkaline Corrosive Liquid

The material is found under column 2. Columns 3 and 4 are self-explanatory. Packaging requirements and/or exceptions are found in column 5. For the alkaline corrosive liquid, Title 49, Sections 173.244 and 173.249 are identified. Once this is done, you go to those sections to identify the proper container and any requirements in its use. Section 173.249 lists the containers acceptable for use with alkaline corrosive liquids. For example, item (3) lists spec. 5 for metal drums. Next, you look at Section 178.80, which gives the exact specifications for that type of container.

Column 6 lists limitations on package quantities such as one quart and five gallons. Column 7 identifies the location of shipments for cargo or passenger vessels such as 1.2 which says the material may be stowed either "on deck" or "under deck."

Once you have done this, you have all the necessary information to identify, package, label, and ship the material as per the regulations.

§172.101 Hazardous Materials Table (cont'd)

(1) W A	(2) Hazardous materials descriptions and proper shipping names	(3) Hazard class	(4) Label(s) required (if not excepted)	(5) Packaging		(6) Maximum net quantity in one package		(7) Water shipments		
				(a) Exceptions	(b) Specific requirements	(c) Passenger carrying aircraft or railcar	(d) Cargo only aircraft	(e) Cargo vessel	(f) Pas- senger vessel	(g) Other requirements
A	Acetyl chloride	Flammable liquid	Flammable liquid	173.244	173.247	1 quart	1 gallon	1	1	Store away from alcohol. Keep cool and dry. Separate longitudinally by an intervening complete compartment or bulk from explosives.
	Acetylene	Flammable gas	Flammable gas	None	173.303	Forbidden	300 pounds	1	1	Shade from radiant heat.

Chapter I—Research and Special Programs Administration

172.101

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

Subpart A—General

- Sec.
173.1 Purpose and scope.
173.2 Classification of a material having more than one hazard as defined in this Part.
173.3 Packaging and exceptions.
173.4—173.5 (Reserved)
173.6 Shipments by air.
173.7 U.S. Government material.
173.8 Canadian shipments and packagings.

Subpart B—Preparation of Hazardous Materials for Transportation

- 173.21 Prohibited packing.
173.22 Shipper's responsibility.
173.22a Use of packagings authorized under exemptions.
173.23 Previously authorized packagings.
173.24 Standard requirements for all packagings.
173.25 Authorized packages in outside containers.
173.26 Quantity limitations.
173.27 Aircraft quantity limitations.
173.28 Reuse of containers.
173.29 Empty packagings, portable tanks, cargo tanks, and tank cars.
173.30 Loading and unloading of transport vehicles.
173.31 Qualification, maintenance, and use of tank cars.
173.32 Qualification, maintenance, and use of portable tanks.
173.33 Qualification, maintenance, and use of cargo tanks.
173.34 Qualification, maintenance, and use of cylinders.

Subpart C—Explosives; Definitions and Preparation

- 173.50 An explosive.
173.51 Forbidden explosives.
173.52 Acceptable explosives.

CLASS A EXPLOSIVES; DEFINITIONS
173.53 Definition of class A explosives.
173.54 Ammunition for cannon.
173.55 Ammunition, nonexplosive.
173.56 Ammunition, projectiles, grenades, bombs, mines, gas mines, and torpedoes.
173.57 Rocket ammunition.
173.58 Ammunition for small arms.
173.59 Chemical ammunition, explosive.
173.60 Black powder and low explosives.
173.61 High explosives.

Title 49—Transportation

- Sec.
173.62 High explosives, liquid.
173.63 High explosive with liquid explosive ingredient.
173.64 High explosives with no liquid explosive ingredient and propellant explosives, Class A.
173.65 High explosives with no liquid explosive ingredient nor any chlorate, safety fuse, blasting caps with metal clad mild detonating fuse, and electric blasting caps.
173.67 Blasting caps with safety fuse and blasting caps with metal clad mild detonating fuse.
173.68 Detonating primers.
173.69 Detonating fuses, Class A, with or without radioactive components, detonating fuse parts containing an explosive, boosters, burners, or supplementary charges.
173.70 Diazodinitrophenol or lead mononitrosesulfonate.
173.71 Fulminate of mercury.
173.72 Guanyl nitrosamino guanlydene hydrazine.
173.73 Lead azide.
173.74 Lead styphnate.
173.75 Nitro manite.
173.76 Nitroguanidine.
173.77 Tetraerythrite tetranitrate.
173.78 Tetrazene.
173.79 Jet thrust units (Jat), Class A explosives, rocket motors, Class A explosives; jet thrust (Jat), Class A explosives; and igniters, rocket motor, Class A explosives.
173.80 Charged oil well jet perforating guns.
173.86 New explosives, definitions; approval and notification.
173.87 Explosives in mixed packing.

CLASS B EXPLOSIVES; DEFINITIONS

- 173.88 Definition of class B explosives.
173.89 Ammunition for cannon with empty projectiles, inert-loaded projectiles, solid projectiles, tear gas projectiles or without projectiles.
173.90 Rocket ammunition with empty, inert-loaded, or solid projectiles.
173.91 Special fireworks.
173.92 Jet thrust units (Jat), CLASS B explosives; rocket motors, CLASS B explosives; igniters, jet thrust (Jat), CLASS B explosives; igniters, rocket motors, CLASS B explosives; and starter cartridges, jet engine, CLASS B explosives.
173.93 Propellant explosives (solid) for cannon, small arms, rockets, guided missiles, or other devices, and propellant explosives (liquid).
173.94 Explosive power devices, Class B.

Chapter I—Research and Special Programs Administration

- Sec.
173.95 Rocket engines (liquid), Class B explosives.

CLASS C EXPLOSIVES; DEFINITIONS
173.100 Definition of Class C explosives.
173.101 Small arms ammunition.
173.101a Cartridges, practice ammunition.
173.102 Explosive cable cutters; explosive power devices, class C; explosive release devices, or starter cartridges, jet engine, class C explosives.
173.103 Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse, and electric blasting caps, not exceeding 1,000 caps.
173.104 Cordtex detonant fuse, mild detonating fuse, metal clad or flexible linear shaped charges, metal clad.
173.105 Percussion, tracer, combination, time fuses and tracers.
173.106 Cartridge bags, empty, with black powder igniters, igniters, safety squibs, electric squibs, delay electric igniters, igniter fuse-metal clad, and fuse leathers or fuse igniters.
173.107 Primers, percussion caps, grenades, empty, primed, and cartridge cases, empty, primed.
173.108 Common fireworks, signal flares, hand signal devices, smoke signals, smoke candles, smoke grenades, smoke pots, and very signal cartridges.
173.109 Toy caps.
173.110 Charged oil well jet perforating guns, total explosive content in guns not exceeding 20 pounds per motor vehicle.
173.111 Cigarette tongs, explosive auto alarms, toy propellant devices, toy smoke devices, trick matches, and trick smoke makers, explosive.
173.112 Oil well cartridges.
173.113 Detonating fuses, class C explosives.
173.114 Actuating cartridges, explosive, fire extinguisher or valve.

Subpart D—Flammable, Combustible, and Pyrophoric Liquids; Definitions and Preparation
173.115 Flammable, combustible, and pyrophoric liquids; definitions.
173.116 Oilage.
173.117 Closing and cushioning.
173.118 Limited quantities of flammable liquids.
173.118a Exceptions for combustible liquids.
173.119 Flammable liquids not specifically provided for.
173.120 Automobiles, motorcycles, tractors, or other self-propelled vehicles.
173.121 Carbon bisulfide (disulfide).
173.122 Acrocin, inhibited.
173.123 Ethyl chloride.

- Sec.
173.124 Ethylene oxide.
173.125 Alcohol, n.o.s. (flammable liquid).
173.126 Nickel carbonyl.
173.127 Nitrocellulose or collodion cotton, fibrous, or nitrostarch, wet; nitrocellulose flakes; collodion nitrocellulose, granular, flake, or block, and lacquer base or lacquer chips, wet.
173.128 Paints and related materials (flammable liquids).
173.129 Polishes, (flammable liquids).
173.130 Refrigerating machines.
173.131 Road asphalt, or tar, liquid.
173.132 Cement liquid, n.o.s.; container cement; linoleum cement; pyroxilin cement; rubber cement; tile cement; wallboard cement; coating solution (flammable liquids).
173.133 Spirits of nitroglycerin.
173.134 Pyrophoric liquids, n.o.s.
173.135 Diethyl dichlorosilane, dimethyl dichlorosilane, ethyl dichlorosilane, ethyl trichlorosilane, methyl trichlorosilane, trimethyl chlorosilane, and vinyl trichlorosilane.
173.136 Methyl dichlorosilane and trichlorosilane.
173.137 Lithium aluminum hydride, ethereal.
173.138 Pentaborane.
173.139 Ethyleneimine, inhibited, and propyleneimine, inhibited.
173.140 Zirconium, metallic, solutions, or mixtures thereof, liquid.
173.141 Amyl mercaptan, butyl mercaptan, ethyl mercaptan, isopropyl mercaptan, propyl mercaptan, and aliphatic mercaptan mixtures.
173.143 Methylchloromethyl ether, anhydrous.
173.144 Ink (flammable liquid).
173.145 Dimethylhydrazine, unsymmetrical, and methylhydrazine.
173.146 -Ieters for refrigerator cars, flammable liquid fuel type.
173.147 Methyl vinyl ketone, inhibited.
173.148 Monochylamine.
173.149 Methyl magnesium bromide in ethyl ether in concentrations not over 40 percent.
173.149a Nitromethane.

Subpart E—Flammable Solids, Oxidizers, and Organic Peroxides; Definitions and Preparation

- Sec.
173.150 Flammable solid; definition.
173.151 Oxidizer; definition.
173.151a Organic peroxide; definition.
173.152 Pa. 118.
173.153 Limited quantities of flammable solids, oxidizers and organic peroxides.
173.154 Flammable solids, organic peroxide solids and oxidizers not specifically provided for.

- Sec.
173.184a Fuses.
173.185 Bags, nitrate of soda, empty and unwashed.
173.186 Barium peroxide and calcium peroxide.
173.187 Benzoyl peroxide, chlorobenzoyl peroxide (para), cyclohexanone peroxide, dimethylhexane dihydroperoxide, lauryl peroxide, or succinic acid peroxide, wet.
173.188 Benzoyl peroxide, dry; chlorobenzoyl peroxide, dry; lauryl peroxide, dry; or succinic acid peroxide, dry.
173.189 Burnt cotton.
173.190 Calcium chlorite and sodium chlorite.
173.191 Calcium phosphide.
173.192 Charcoal.
173.193 Chlorate of soda, chlorate of potash, and other chlorates.
173.194 Chromic acid or chromic acid mixture, dry.
173.195 Coal, ground bituminous, sea coal, coal facies.
173.196 Cobalt resin, precipitated, calcium resin, and calcium resin.
173.197 Cotton waste, oily.
173.198 Lithium amide, powdered.
173.199 Fiber, burnt.
173.200 Fibers or fabrics impregnated, saturated or coated.
173.201 Fish scrap or fish meal.
173.202 Hair, wet.
173.203 Aluminum dross or magnesium dross.
173.204 Iron sponge, spent oxide, spent iron mass, spent iron sponge.
173.205 Lacquer base, or lacquer chips, dry.
173.206 Matches.
173.207 Motion-picture film and X-ray film.
173.208 Calcium carbide.
173.209—173.211 (Reserved)
173.212 Nitrates.
173.213 Potassium nitrate mixed (fused) with sodium nitrate.
173.214 Nitrocellulose or collodion cotton, wet; or nitrocellulose, collodized, granular, or flake, wet, nitrocellulose, wet, or nitrocellulose, wet.
173.215 Paper stock, wet.
173.216 Paper waste, wet.
173.217 Peroxide of sodium.
173.218 Phosphoric anhydride.
173.219 Phosphorus, amorphous, red.
173.220 Phosphorus, white or yellow.
173.221 Phosphorus pentachloride.
173.222 Perchloric acid, and urea nitrate, trinitrobenzoic acid, and urea nitrate, red.
173.223 Picric acid, trinitrobenzoic acid, or urea nitrate, wet.
173.224 Potassium permanganate.

- Sec.
173.225 Magnesium or zirconium scrap consisting of borings, clippings, shavings, sheet, turnings, or scrapings, and magnesium metallic (other than scrap), powdered, pellets, turnings, or ribbon.
173.226 Liquid organic peroxide solutions, n.o.s.
173.227 Rubber scrap, rubber buffings, reclaimed rubber, or regenerated rubber.
173.228 Sodium and potassium, metallic liquid alloy.
173.229 Tetraethylmethane.
173.230 Sodium picramate, wet.
173.231 Sodium picramate, wet.
173.232 Sodium or potassium, metallic; sodium amide; sodium potassium alloy; metal; lithium silicon hydride; lithium ferrosilicide; lithium hydride; lithium borohydride; lithium aluminum hydride; lithium acetylacetylene; aluminum amine complex; aluminum hydride; calcium metal; rubidium metal; zirconium hydride, powdered.
173.233 Sulfide of sodium or sulfide of potassium, fused or concentrated, when ground.
173.234 Titanium metal powder, wet or dry.
173.235 Tankage, garbage, and tankage fertilizer.
173.236 Tankages, rough ammoniate.
173.237 Textile waste, wet.
173.238 Trinitrobenzene and trinitrochloro, wet.
173.239 Wool waste, wet.
173.240 Hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, mechanically produced, finer than 270 mesh particle size; hafnium metal or zirconium metal, wet, minimum 25 percent water by weight, chemically produced (See Note 1), finer than 20 mesh particle size; hafnium metal or zirconium metal, dry, in an atmosphere of inert gas, chemically produced (See Note 1), finer than 20 mesh particle size.
173.241 Zirconium picramate, wet.
173.242 Calcium hypochlorite mixture, dry; lithium hypochlorite mixture, dry; mono-(trichloro) tetra-monopotassium dichloro-penta-s-triazine-trione, dry; penta-dichloro-s-triazine-trione, dry; sodium dichloro-s-triazine-trione, dry; sodium dichloro-s-triazine-trione, dry; trichloro-s-triazine-trione, dry.
173.243 Isopropyl percarbonate, unstabilized.
173.244 Potassium perchlorate.

- Sec.
173.245 Acetyl bromide; acetyl chloride; acetyl iodide; antimony pentachloride; benzoyl chloride; boron trifluoride; acetic acid complex; chromyl chloride; dichloroacetyl chloride; diphenylmethyl bromide solutions; pyrosulfuryl chloride; silicon chloride; sulfur chloride (mono and di); sulfur chloride (anhydrous); tin tetrachloride (anhydrous); titanium tetrachloride; and trimethyl acetyl chloride.
173.246 Vanadium tetrachloride and vanadium oxytrichloride.
173.247 Acid sludge, alidex acid, spent sulfuric acid, or spent mixed acid.
173.248 Alkaline liquids, n.o.s.; Alkaline corrosive liquids, n.o.s.; Alkaline fluoride solution; Potassium fluoride solution; Sodium aluminate, liquid; Sodium hydroxide solution; Potassium hydroxide solution; Boiler compound, liquid, solution.
173.249 Cleaning compound, liquid; Coal tar dye, liquid; Dye intermediate, liquid; Mining reagent, liquid; and Textile treating compound mixture, liquid.
173.250 Automobiles, other self-propelled vehicles, engines or other mechanical apparatus.
173.251 Benzene phosphorus dichloride and benzene phosphorus trichloride.
173.252 Boron trichloride and boron tribromide.
173.253 Bromine.
173.254 Chloroacetyl chloride.
173.255 Chlorosulfonic acid and mixtures of chlorosulfonic acid-sulfur trioxide.
173.256 Dimethyl sulfate.
173.257 Compounds, cleaning, liquid.
173.258 Electrolyte (acid) and alkaline corrosive battery fluid.
173.259 Electrolyte, acid, or alkaline corrosive battery fluid, packed with storage batteries.
173.260 Electrolyte, acid, or alkaline corrosive battery fluid, packed with battery charger, radio current supply device, or electronic equipment and actuating devices.
173.261 Electric storage batteries, wet.
173.262 Fire-extinguisher charges.
173.263 Hydrobromic acid.
173.264 Hydrochloric (muriatic) acid, hydrochloric (muriatic) acid mixtures; hydrochloric (muriatic) acid solution, inhibited; sodium chloride solution (not exceeding 42 percent sodium chloride); and cleaning compounds, liquids, containing hydrochloric (muriatic) acid.
173.265 Hydrofluoric acid; White acid.
173.266 Hydrofluosilicic acid.
173.267 Hydrogen peroxide solution in water.

- Sec.
173.267 Mixed acid (nitric and sulfuric acid) (infrating acid).
173.268 Nitric acid.
173.269 Perchloric acid.
173.270 Phosphorus tribromide.
173.271 Phosphorus oxybromide, phosphorus oxychloride, phosphorus trichloride, and thiophosphoryl chloride.
173.272 Sulfuric acid.
173.273 Sulfur trioxide, stabilized.
173.274 Fluosulfonic acid.
173.275 Difluorophosphoric acid, anhydrous, monofluorophosphoric acid, and mixtures thereof.
173.276 Anhydrous hydrazine and hydrazine solution.
173.277 Hydrochloric solutions.
173.278 Nitrohydrochloric acid.
173.279 Anisoyl chloride.
173.280 Trichloroethane.
173.281 Benzyl bromide (bromotoluene, alpha).
173.282 Isopropyl percarbonate, stabilized.
173.283 Fluoboric acid.
173.284—173.285 (Reserved)
173.286 Chemical kits.
173.287 Chromic acid solution.
173.288 Chloroformates.
173.289 Formic acid and formic acid solutions.
173.290 Mixtures of hydrofluoric and sulfuric acid.
173.291 Flame retardant compound, liquid.
173.292 Hexamethylene diamine solution.
173.293 Iodine monochloride.
173.294 Monochloroacetic acid, liquid or solution.
173.295 Benzyl chloride.
173.296 Di iso octyl acid phosphate.
173.297 Titanium sulfate solution containing not more than 45 percent sulfuric acid.
173.298 Methyltrihydro phthalic anhydride.
173.299 Etching acid liquid, n.o.s.
173.299a Tris-(1-aziridinyl) phosphine oxide.
- Subpart G—Compressed Gases; Definition and Preparation
- 173.300 Definitions.
173.300a Approval of Independent Inspection agency.
173.300b Approval of non-domestic chemical analyses and tests.
173.301 Termination of approval.
173.301 General requirements for shipment of compressed gases in cylinders.
173.302 Charging of cylinders with non-liquefied compressed gases.
173.303 Charging of cylinders with compressed gas in solution (acetylene).

- Sec.
173.356 Thiophosgene.
173.357 Chloroplatin and chloroplatin mixtures containing no compressed gas or Poison A liquid.
173.358 Hexaethyl tetraphosphate, methyl parathion, organic phosphate compound, organic phosphorus compound, parathion, and tetraethyl dithio pyrophosphate, and tetraethyl pyrophosphate, liquid.
173.359 Hexaethyl tetraphosphate mixtures; methyl parathion mixtures; organic phosphorus compound mixtures; parathion mixtures; tetraethyl dithio pyrophosphate mixtures; and tetraethyl pyrophosphate mixtures, liquid (includes solutions, emulsions, or emulsifiable liquids).
173.360 Perchloro-methyl-mercaptan.
173.361 Aldrin mixtures, liquid, with more than 60 percent aldrin.
173.362 4-Chloro-o-toluidine hydrochloride.
173.362a Dinilrophenol solutions.
173.363 General packaging requirements for Poison B solids.
173.364 Limited quantities of Poison B solids.
173.365 Poison B solids not specifically provided for.
173.366 Arsenic (arsenic trioxide) or arsenic acid (solid).
173.367 Arsenical compounds, n.o.s.; arsenate of lead; calcium arsenate; Paris green; and arsenical mixtures.
173.368 Arsenical dust, arsenical fine dust, and other poisonous noncombustible by-product dusts; also arsenic trioxide, calcium arsenate, and sodium arsenate.
173.369 Carbolic acid (phenol), not liquid.
173.370 Cyanides and cyanide mixtures, dry.
173.371 Dinilrobenzol (dinilrobenzene).
173.372 Mercury bichloride (mercuric chloride).
173.373 Ortho-nitroaniline and para-nitroaniline.
173.374 Nitrochlorobenzene, meta or para.
173.375 Sodium azide.
173.376 Aldrin and aldrin mixtures, dry, with more than 65 percent aldrin.
173.377 Hexaethyl tetraphosphate mixtures; methyl parathion mixtures; organic phosphorus compound mixtures; parathion mixtures; tetraethyl dithio pyrophosphate mixtures; and tetraethyl pyrophosphate mixtures, dry.
173.378 Cyanogen bromide.
173.381 Irritating materials; Definition and general packaging requirements.
173.382 Irritating materials, not specifically provided for.
173.383 Chemical ammunition.
173.384 Monochloroethane, stabilized.

- Sec.
173.385 Tear gas grenades, tear gas canisters, or similar devices.
173.386 Ethologic agents; definition and scope.
173.387 Packaging requirements for ethologic agents.
173.388 Labeling of packages containing ethologic agents.
173.389 Radioactive materials; definitions.
173.390 Transport groups of radionuclides.
173.391 Limited quantities of radioactive materials and radioactive devices.
173.392 Low specific activity radioactive material.
173.393 General packaging and shipment requirements.
173.393a U.S. Atomic Energy Commission approved packages; standard requirements and conditions.
173.393b International shipments and foreign-made packages; standard requirements and conditions.
173.394 Radioactive material in special form.
173.395 Radioactive material in normal form.
173.396 Plutonium radioactive material.
173.397 Contamination control.
173.398 Special tests.
- Subpart I—Special Requirements for Certain Rail Shipments or Movements
- 173.426 Cars, truck bodies or trailers containing lading which has been fumigated or treated with flammable liquids, flammable gases, poisonous liquids or solids, or poisonous gases.
173.427—173.431 (Reserved)
173.432 Tank car shipments.
- Subpart J—Other Regulated Materials; Definition and Preparation
- 173.500 Definitions.
173.505 Exceptions for Other Regulated Material (ORM).
173.510 General packaging requirements.
- Subpart K—Other Regulated Materials; ORM-A
- 173.605 Ammonium hydrosulfide solution, ammonium polysulfide solution, bromochloromethane, dibromodifluoromethane, dichlorodifluoroethylene, dichloromethane, methyl chloroform, perfluoro 2-butene, tetrachloroethylene, and trichloroethylene.
173.610 Camphene.
173.618 Carbon dioxide, solid (dry ice).
173.620 Carbon tetrachloride, ethylene dibromide (1,2-dibromochloroethane), and letrachloroethane.
173.630 Chloroform.
173.635 Ferrophosphorus.

§ 173.1

Sec.
173.845 Ferrocenolion.
173.850 Hexachloroethane.
173.855 Naphthalene or naphthalin.

Subpart L—Other Regulated Materials; ORM-B
173.860 Ammonium hydrogen sulfate, ammonium fluoride, barium oxide, chloroplatinic acid, copper chloride, ferric chloride, lead chloride, molybdenum pentachloride, potassium hydrogen sulfate, sodium aluminate, sodium hydrogen sulfate, and/or sodium hydrogen sulfate (each in solid form).
173.865 Lime, unslaked; quicklime; and calcium oxide.
173.866 Mercury, metallic.
173.867 Gallium metal, liquid.
173.868 Gallium metal, solid.

Subpart M—Other Regulated Materials; ORM-C
173.896 Inflatable life rafts.
173.910 Ammonium sulfate nitrate.
173.915 Battery parts.
173.920 Bleaching powder.
173.925 Box toe board.
173.930 Burlap bags, used and unwashed or not cleaned.
173.931 Burlap cloth, burlap bags, new, used, and washed, or vacuum cleaned, which cleaned, or otherwise mechanically cleaned.

173.945 Calcium cyanamide, not hydrated.
173.952 Castor beans and castor pomace.
173.958 Coconut meal pellets.
173.960 Copra.
173.965 Cotton and other fibers.
173.970 Cotton baling, baling dross, wadding, seed hull fiber, shavings, pulp, and cut lintens.
173.975 Cotton sweepings; and textile, cotton, felt, or wool waste.
173.980 Excelsior.
173.985 Exothermic ferrochrome, ferro-manganese, and silicon-chrome.
173.990 Feed, wet, mixed.
173.995 Fish scrap and fish meal.
173.1000 Garbage lantage, rough ammoniac lantage, or lantage fertilizer.
173.1005 Hay or straw.
173.1010 Lead dross or scrap.
173.1020 Mangelized material.
173.1025 Metal borings, shavings, turnings or cuttings.
173.1030 Oakum or twisted jute packing.
173.1035 Oiled material.
173.1040 Pesticide, water-reactive.
173.1045 Petroleum coke, uncalcined.
173.1060 Rosin.
173.1065 Rubber curing compound, solid.
173.1070 Sawdust or wood shavings.
173.1075 Scrap paper or waste.
173.1080 Sulfur.

Title 49—Transportation

Sec.
173.1085 Yeast, active (in liquid or compressed form).

Subpart N—Other Regulated Materials; ORM-D
173.1200 Consumer Commodity.
Appendix A—Method of testing corrosion to skin

AUTHORITY: 49 U.S.C. 1803, 1804, 1806; 49 CFR 1.53(c), unless otherwise noted.
NOTE: Nomenclature changes to Part 173 appear at 43 FR 48643 (Amdt. 173-121, Oct. 19, 1978).

NOTE: For a notice document notifying shippers of hazardous materials of the applicable regulations in this part see 40 FR 33066, Aug. 6, 1975.

EFFECTIVE DATE NOTE: At 43 FR 48643, Oct. 19, 1978, amendments to this Part were made, effective Oct. 19, 1978. At 43 FR 81020, Nov. 2, 1978, the effective date was corrected to Sept. 30, 1978.

Subpart A—General

§ 173.1 Purpose and scope.

(a) This Part defines hazardous materials for transportation purposes and prescribes certain requirements to be observed in preparing them for shipment by air, highway, rail, or water, or any combination thereof.

(b) A shipment that is not prepared for shipment in accordance with this subchapter may not be offered for transportation by air, highway, rail, or water. It is the duty of each person who offers hazardous materials for transportation to instruct each of his officers, agents, and employees having any responsibility for preparing hazardous materials for shipment as to applicable regulations in this subchapter.

(c) When a person other than the person preparing a hazardous material for shipment performs a function required by this Part, that person shall perform the function in accordance with this Part.

(Amdt. 173-94, 41 FR 16092, Apr. 15, 1976, as amended by Amdt. 173-106, 41 FR 40476, Sept. 20, 1976)

198

Chapter I—Research and Special Programs Administration

§ 173.4

§ 173.2 Classification of a material having more than one hazard as defined in this Part.

(a) Except as provided in paragraph (b) of this section, a hazardous material, having more than one hazard as defined in this part must be classed according to the following order of hazards:

- (1) Radioactive material.
- (2) Poison A.
- (3) Flammable gas.
- (4) Non-flammable gas.
- (5) Flammable liquid.
- (6) Oxidizer.
- (7) Flammable solid.
- (8) Corrosive material (liquid).
- (9) Poison B.
- (10) Corrosive material (solid).
- (11) Irritating material.
- (12) Combustible liquid (in containers having capacities exceeding 110 gallons).
- (13) ORM-B.
- (14) ORM-A.
- (15) Combustible liquid (in containers having capacities of 110 gallons or less).

(b) Exceptions. Paragraph (a) of this section does not apply to—(1) a material specifically identified in § 172.101 of this subchapter;

- (2) An explosive required to be classed and approved by § 173.86;
- (3) An etiologic agent identified in § 173.308 as those materials listed in 42 CFR 72.25(c); or
- (4) An organic peroxide. (See § 172.101 and § 173.151a of this subchapter.)

(Amdt. 173-94, 41 FR 16092, Apr. 15, 1976, as amended by Amdt. 173-94A, 41 FR 40680, Sept. 20, 1976; Amdt. 173-116, 43 FR 17944, Apr. 27, 1978)

§ 173.3 Packaging and exceptions.

(a) The packaging of hazardous materials for transportation by air, highway, rail, or water must be as specified in this Part. Methods of manufacture, packing, and storage of hazardous materials, that affect safety in transportation, must be open to inspection by a duly authorized representative of the initial carrier or a representative of the Department. Methods of manufacture and related functions necessary for completion of a DOT specification packaging must be open to inspection

(b) General shipping requirements. When the regulations indicate a hazardous material is forbidden aboard cargo-only aircraft, the material is also forbidden aboard passenger-carrying aircraft.

(b) General packaging requirements. (1) In addition to the requirements of this part and Parts 176 and 178 of this subchapter, for air shipments

199

30-177 O-79-14

each packaging must be designed and constructed to prevent leakage that may be caused by changes in altitude and temperature during air transportation.

(2) Inner containers that are breakable (such as earthenware, glass, or brittle plastic), must be packaged to prevent breakage and leakage under conditions normally incident to transportation. These completed packagings must be capable of withstanding a 4-foot drop on solid concrete in the position most likely to cause damage. Cushioning and absorbent materials must not be capable of reacting dangerously with the contents. Where any plastic packaging is specified in this part, a plastic bag or pouch is not permitted unless specifically authorized.

(3) For any packaging with a capacity of 110 gallons or less containing liquids, sufficient outage (ullage) must be provided to prevent liquid contents from completely filling the packaging at 130° F. The primary packaging (which may include composite packaging), for which retention of the liquid is the basic function, must be capable of withstanding, without leakage, an internal absolute pressure of no less than 26 lbs./sq. inch or no less than the sum of the absolute vapor pressure of the contents at 130° F. (56° C.) and the atmospheric pressure at sea level, whichever is greater.

(4) Stoppers, corks, or other such friction-type closures must be held securely, tightly, and effectively in place with wire, tape, or other positive means. Each screw-type closure on any inside plastic packaging must be secured to prevent the closure from loosening due to vibration or substantial changes in temperature.

(5) Bags permitted by regulations as outside packaging for transportation aboard aircraft must be water resistant.

(6) For any cylinder containing hazardous materials incorporating valves, sufficient protection must be provided to prevent operation and damage to such valves during transportation, by one of the following methods:

(i) By equipping each cylinder with securely attached valve caps or protective headrings, or

(ii) By boxing or crating of the cylinders.

(7) Tank cars and tank motor vehicles containing hazardous materials may not be transported aboard aircraft.

(c) *Special labeling requirements.* See "Marking materials" in §§ 172.101 and 173.102 of this subchapter and see § 172.101 for cargo-only aircraft labeling requirements.

(Amdt. 173-94, 41 FR 18063, Apr. 15, 1976, as amended by Amdt. 173-94B, 41 FR 6706, Dec. 30, 1976)

§ 173.7 U.S. Government material.

(a) Shipments of hazardous materials offered by or consigned to the Department of Defense (DOD) of the U.S. Government must be packaged, including limitations of weight, in accordance with the regulations in this subchapter or in containers of equal or greater strength and efficiency as required by DOD regulations.

(1) Hazardous materials sold by the DOD in packagings that are not marked in accordance with the requirements of this subchapter may be shipped from DOD installations if the DOD certifies in writing that the packagings are equal to or greater in strength and efficiency than the packaging prescribed in this subchapter. The shipper shall obtain such a certification in duplicate for each shipment. He shall give one copy to the originating carrier and retain the other for no less than 1 year.

(b) Shipments of radioactive materials, made by or under the direction or supervision of the U.S. Energy Research and Development Administration or the Department of Defense, and which are escorted by personnel specifically designated by or under the authority of those agencies, for the purpose of national security, are not subject to the regulations in Parts 100-189 of this subchapter.

(29 FR 18671, Dec. 29, 1964, as amended by Order 74, 32 FR 5274, Mar. 20, 1967; Redesignated, 32 FR 5606, Apr. 5, 1967; Amdt. 173-71, 38 FR 7561, Mar. 23, 1973; Amdt. 173-94, 41 FR 18063, Apr. 15, 1976)

Chapter I—Research and Special Programs Administration

§ 173.22

§ 173.8 Canadian shipments and packaging.

gas is prohibited. Such materials may be offered for transportation when properly stabilized or inhibited. Refrigeration may be used as a means of stabilization only when approved by the Bureau of Explosives.

(c) The offering for transportation of any package or container of any material which will cause a dangerous evolution of heat or gas under conditions normally incident to transportation is forbidden.

(d) The offering for transportation of any package containing a cigarette lighter or other similar ignition device charged with fuel and equipped with an ignition element, or any self-lighting cigarette, is forbidden unless the design of the device and its packaging insofar as they affect safety in transportation have been examined and approved by MTB-TSC. (An approval which was issued by the B of E remains valid to the same extent as if it had been issued by MTB-TSC.) For lighters containing flammable gases, also see § 173.308.

(e) Except as specified in § 173.301(d) specification packagings made and maintained in full compliance with the corresponding specifications prescribed by the Railway Transport Committee of the Canadian Transport Commission (formerly the Board of Transport Commissioners for Canada), in its regulations for the Transportation of Dangerous Commodities by Rail, and marked in accordance therewith (e.g., BFC, CTC, etc.) may be used for the shipment of hazardous materials within the United States.

(Amdt. 173-11, 34 FR 12889, Aug. 1, 1969, as amended by Amdt. 173-94B, 41 FR 6706, Dec. 30, 1976; Amdt. 173-113, 43 FR 9786, Feb. 16, 1978)

Subpart B—Preparation of Hazardous Materials for Transportation

§ 173.21 Prohibited packing.

(a) The offering of packages of hazardous materials in the same packaging, freight container, or overpack with other hazardous materials, the mixture of contents of which would be liable to cause a dangerous evolution of heat or gas or produce corrosive materials, is forbidden except as specified in §§ 173.152(a), 173.242(a), (b), and 173.301(a).

(b) The offering for transportation of any package or container of any liquid solid or gaseous material which under conditions incident to transportation may polymerize (combine or react with itself) or decompose so as to cause dangerous evolution of heat or

specification requirement of Part 178 or Part 179, the shipper must perform that function in accordance with the specification.

(b) Prior to each shipment of fissile radioactive materials, and Type B or large quantities of radioactive materials, the shipper shall notify the consignee of the dates of shipment and of expected arrival. The shipper shall also notify each consignee of any special loading/unloading instructions prior to his first shipment.

Amdt. 173-3, 33 FR 14921, Oct. 4, 1968;
Amdt. 173-14, 34 FR 17523, Oct. 30, 1969;
Amdt. 173-84, 41 FR 15063, Apr. 15, 1970;
Amdt. 173-100, 42 FR 2688, Jan. 13, 1977]

173.22a Use of packagings authorized under exemptions.

(a) Except as provided in paragraph (b) of this section, no person may offer hazardous material for transportation in packaging the use of which is dependent upon an exemption issued under Subpart B of Part 107 of this title, unless that person is the holder of or a party to the exemption.

(b) If an exemption authorizes the use of a packaging for the shipment or transportation of a hazardous material by any person or class of persons other than or in addition to the holder of the exemption, that person or a member of that class of persons may use the packaging for the purposes authorized in the exemption subject to the terms specified therein. However, no person may use a packaging under the authority of this paragraph unless he maintains a copy of the exemption at each facility where the packaging is being used in connection with the shipment or transportation of the hazardous material concerned. Copies of exemptions may be obtained from the Office of Hazardous Materials Regulation, U.S. Department of Transportation, Washington, D.C. 20590, Attention: Docket Section.

(Amdt. 173-93, 41 FR 3478, Jan. 23, 1976)

§ 173.2.3 Previously authorized packaging.

(a) Where the regulations require Spec. 6D or 37M (§ 178.102 or § 178.134 of this subchapter) cylindrical steel overpacks, Spec. 5B, 6J, or 37A (single-drip container) (§ 178.82, § 178.100, or

§ 178.131 of this subchapter) metal drums manufactured before March 18, 1964, having Inside Spec. 2S, 2SL, 2T, or 2TL (¶ 178.21, § 178.27, § 178.35, or § 178.35a of this subchapter) polyethylene container, may be continued in use for the commodities and gross weights for which they were previously authorized.

(b) Reusable molded polyethylene containers for use without overpack complying with Spec. 34 (§ 176.19 of this subchapter), manufactured before September 5, 1966, may be continued in use, if they are plainly marked "ICC-34," and are embossed with the maker's name or symbol, rated capacity, and the month and year of manufacture.

Amdt. 173-3, 33 FR 14921, Oct. 4, 1968, as amended by Amdt. 173-90, 39 FR 46240, Dec. 31, 1974; Amdt. 173-94; 41 FR 16063, Apr. 15, 1976]

173.24 Standard requirements for all packages.

(a) Each package used for shipping hazardous materials under this subchapter shall be so designed and constructed, and its contents so limited, that under conditions normally incident to transportation—

(1) There will be no significant release of the hazardous materials to the environment;

(2) The effectiveness of the packaging will not be substantially reduced; and

(3) There will be no mixture of gases or vapors in the package which could, through any credible spontaneous increase of heat or pressure, or through an explosion, significantly reduce the effectiveness of the packaging.

(b) Materials for which detailed specifications for packaging are not set forth in this part must be securely packaged in strong, tight packages meeting the requirements of this section.

(c) Packaging used for the shipment of hazardous materials under this subchapter shall, unless otherwise specified or exempted therein, meet all of the following design and construction criteria:

(1) Each specification must be marked as follows:

(1) In an unobstructed area with letters and numerals identifying the container specification (e.g., DOT-1A, DOT-17E-304HT, DOT-23G40). See 178.0-2 of this subchapter.

(II) The name and address or symbol of person making the mark specified in paragraph (c)(1)(i) of this section. Symbol letters, if used, must be registered with the MTB-TSC. Duplicate symbols are not authorized.

(iii) The markings must be stamped, embossed, burned, printed, or otherwise marked on the packaging to provide adequate accessibility, permanence, and contrast so as to be readily apparent and understood.

(iv) Unless otherwise specified, letters and numerals must be at least ¼ inch high.

(v) Packaging which does not comply with the applicable specification listed in Parts 178 and 179 of this subchapter must not be marked to indicate such compliance (see § 178.0-2 and § 179.1 of this subchapter).

(2) Steel used shall be low-carbon, commercial quality steel. Stainless, open hearth, electric, basic oxygen, or other similar quality steels are acceptable. Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal Thickness (inches)	Minimum Thickness (inches)
1	0.1016	0.0947

(3) Lumber used shall be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

Chapter I—Research and Special Programs Administration

ing suitable and appropriate techniques, materials, and equipment.

(5) Packaging materials and contents shall be such that there will be no significant chemical or solvent reaction.

means chemical or galvanic reaction among any of the materials in the package.

(6) Closures shall be adequate to prevent inadvertent leakage of the contents under normal conditions incident to transportation. Casketed clo-

ers shall be fitted with gaskets of efficient material which will not be deteriorated by the contents of the container.

(7) Nails, staples, and other metallic devices shall not protrude into the interior of the outer packaging in such a manner as to be likely to cause fall-

8) The nature and thickness of the packaging shall be such that friction during transport does not generate any heating likely to decrease the chemical stability of the contents.

9) Polyethylene used must be of a type compatible with the lading and must not be permeable to an extent that a hazardous condition could be created during transportation and handling.

the. For specification containers, compliance with the applicable specifications in Parts 178 and 179 of this chapter shall be required in all cases, except as otherwise provided in this subchapter.

Amtdl. 173-3, 33 FR 14921, Oct. 4, 1918, as amended by Amtdl. 173-11, 34 FR 12889, Apr. 1, 1969; Amtdl. 173-20, 35 FR 5560, Apr. 27, 1970; Amtdl. 173-94, 41 FR 16053, Apr. 15, 1976; Amtdl. 173-100, 41 FR 38180, Sept. 9, 1976; Amtdl. 173-119, 43 FR 36446, Aug. 17, 1978.

3.2.5 Authorized packages in outside containers.

3) Authorized packages containing corrosive liquids may be shipped in tightly packed in a strong outer fiberboard box or drum, wooden barrel or crate, metal barrel or can, or overpack, meeting the requirements of §§173.21 and 173.24. The outside container must be marked as required by this subchapter for each hazardous material contained therein unless markings and labels are provided on the inner container.

representative of each material in the outside container are visible. Packages required by the regulations in this subchapter to be marked "THIS SIDE UP" or "THIS END UP" must be packed in the outside container with their filling holes up and the outside container marked "THIS SIDE UP" or "THIS END UP" to indicate the upward position of closures. The outside container must also be marked "INSIDE PACKAGES COMPLY WITH PRESCRIBED SPECIFICATIONS" when specification packagings are required unless the specification markings on the inside packaging are visible.

(b) Authorized packages containing acids or other corrosive liquids except nitric acid, perchloric acid, or hydrogen peroxide, solution containing over 52 percent hydrogen peroxide by weight, may be shipped when tightly packed in a strong outside fiberboard or wooden box, wooden crate or overpack, meeting the requirements of §§ 173.21 and 173.24 provided such outside container shall not contain any other hazardous material except under the following conditions:

(1) As provided in §§ 173.242, 173.257, 173.258, 173.259, 173.260, 173.261, and 173.266.

(2) Electrolyte acid or alkaline corrosive battery fluid in packages prescribed in §§ 173.257 and 173.258 may be included in outside shipping containers with dry charged storage batteries when packed to prevent movement within the outside containers.

(3) The outside container must be marked with the proper shipping name and labeled as required by this subchapter for each hazardous material contained within unless the markings and labels representative of each material in the outside container are visible. The outside container must be marked "THIS SIDE UP" or "THIS END UP" to indicate the upward position of closures and also marked "INSIDE PACKAGES COMPLY WITH PRESCRIBED SPECIFICATIONS" when specification packagings are required unless the specification markings on the inside packaging are visible.

Title 49—Transportation

129 FR 16671, Dec. 26, 1964. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by Amdt. 173-94, 41 FR 16063, Apr. 15, 1976

§ 173.26 Quantity limitations.

(a) When quantity limitations are specified in Parts 170-189 of this subchapter by United States liquid measure or by avoirdupois weight it is authorized that quantities measured by the metric system may be substituted, up to but not exceeding 1 gallon for liquids and 10 pounds for solids, on the basis of 1 liter per quart specified and 500 grams per pound specified.

(b) When quantity limitations do not appear in the packaging requirements of this subchapter, the permitted gross weight or capacity authorized for a container to be offered for transportation is as shown in the container specification. (See also § 173.27.)

129 FR 16671, Dec. 26, 1964. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by Amdt. 173-94, 41 FR 16064, Apr. 15, 1976

§ 173.27 Aircraft quantity limitations.

(a) The maximum quantity of hazardous material that may be offered for transportation by air in a package that is required for the material by this subchapter may not exceed that quantity prescribed for the material in § 172.101 of this subchapter.

(b) When offered for transportation by air, the combined quantity of any one class of materials may not exceed the lowest maximum quantity prescribed in 172.101 of this subchapter for any one of the materials in that class contained in the same package that meets the minimum requirements for the material contained therein.

(Amdt. 173-94, 41 FR 16064, Apr. 15, 1976)

§ 173.28 Reuse of containers.

(a) Containers used more than once (refilled and reshipped after having been previously emptied) must be in such condition, including closure devices and cushioning materials, that they comply in all respects with the prescribed requirements for those containers. Repairs must be made in an efficient manner in accordance with requirements for materials and construction as prescribed in Parts 178 and 179 of this subchapter for new

Chapter I—Research and Special Programs Administration

containers, or as otherwise prescribed. Parts that are weak, broken, or otherwise deteriorated must be replaced.

(1) Retest of carboy packages must have been made by or for shippers, or their authorized agents, as required by applicable provisions of the specifications in Part 178 of this subchapter before carboys which are to be offered for transportation are filled.

Note 1: Tests not required by shipper who fills and ships or who refills filled carboys for one shipment only carboy packages which have been properly tested by another shipper or a duly authorized agency.

(b) Markings applied as prescribed by the specifications must be maintained in a legible condition.

(c) If, on account of painting or any other reason, the markings as prescribed for any container cannot be kept plain and legible, a metal plate, brazed or soldered, or otherwise securely fastened to the container, with a reproduction of the prescribed markings plainly stamped thereon, will be permitted.

(d) Containers previously used for the shipment of any hazardous material must have the old markings, including name of contents, addresses, and labels, if any, thoroughly removed or obliterated before being used for the shipment of other articles.

(e) Boxes previously used for high explosives containing a liquid explosive ingredient not contained in an inside metal container must not be again used for shipments of any character.

(f) Boxes that have been contaminated by liquid explosive composition must not again be used for shipments of any character.

(g) Kegs previously used for any chlorate must not be again used for shipments of any character.

(h) Metal kegs previously used for black powder not contained in an interior package must not be again used for shipment of any explosive.

Note 1: Because of the present emergency and until further order of the Department, metal kegs, previously used for the shipment of black powder not contained in an interior package, may be used provided the kegs are in good physical condition and are not liable to permit escape of contents

during transportation. Empty kegs previously used for shipment of black powder must be entirely free of black powder on the inside and outside before being offered for transportation.

(h) Except as provided in paragraphs (m) and (n) of this section and paragraph (h)(1) of this section, single-trip containers made under specifications prescribed in Part 178 of this subchapter, from which contents have once been removed following use for shipment of any material, must not be used thereafter for shipment of hazardous materials.

(i) Single-trip containers inspected and tested prior to January 1, 1971, that have been approved for reuse by the Bureau of Explosives may be used until July 1, 1971, under the terms and conditions specified.

(j) Containers which are designated as nonreusable containers, marked NRC, and made under specifications prescribed in Part 178 of this subchapter, from which contents have once been removed following use for shipment of any article, must not be again used as shipping containers for explosives, flammable liquids, flammable solids, organic peroxides, oxidizers, corrosive liquids, or poisons, class B or C, as defined in this Part.

(k) Cylinders or other containers which are designated as nonrefillable or for single-trip use under the specifications prescribed in Part 178 of this subchapter, and from which contents have once been removed following use for the shipment of any article, must not be again used as shipping containers for compressed gases.

(l) Containers used for shipments of etching acid liquid, n.o.s. must not be reused for shipment of any commodity.

(m) Cylinders used in anhydrous hydrofluoric acid service must comply with the requirements of § 173.204(h)(1) and must not be used in any other service.

(n) Specifications 17C, 17E, and 17H steel drums (§§ 178.116, 178.110, 178.118 of this subchapter) from which contents have been removed, may be reused as prescribed in this part as packagings for shipment of flammable liquids, flammable solids, organic peroxides, oxidizers, poisons

§ 173.26

covered by § 173.370, radioactive materials, and corrosive liquids covered by §§ 173.249 and 173.249a, only if the following requirements, in addition to the other requirements of this section, are complied with prior to each reuse:

- (1) Each drum must be thoroughly cleaned to remove all residues and foreign matter, inspected for deterioration or defects, and returned to its original shape and contour. All closure devices and parts must be removed (if removable), inspected for defects, and replaced as necessary. Each open head cover gasket must be replaced. Any drum which shows evidence of deterioration (e.g., visible pitting; creases; significant reduction in parent metal thickness from rust, corrosion, or cleaning processes; metal fatigue; or other material defects) or which cannot be returned to its original shape and contour does not qualify for reuse.

- (2) The entire surface of each closed-head drum (and after December 31, 1971, each open-head drum, except for its removable head and adjacent chime area) must be tested for leakage by constant internal air pressure. The leakage test must be conducted by submersion under water, by completely covering the surface with soap suds or oil, or by some other method that will be equally sensitive. The air pressure must be maintained for a period of time sufficient to permit a complete inspection for leaks. The minimum air pressure for the test must be as follows:

Specification No.	Capacity	Minimum test pressure p.s.i.
17C.....	All	15
17E.....	Over 12 gallons.....	7
	12 gallons or less.....	5
17H.....	Over 12 gallons.....	7
	12 gallons or less.....	5

If leaking, the drum does not qualify for reuse.

(3) Marking:

- (i) All previous test markings, commodity identification markings, and labels must be removed.
- (ii) The outside of each drum qualifying for reuse under this section must

Title 49—Transportation

be marked on the body within 10 inches of the top head with the following information: "Tested" (or "Inspected" as appropriate), the month and year of the test (or inspection, if an open-head drum) and the DOT registration number of the reconditioner. For example:

TESTED 2/70

DOT R1001

The registration number required for this marking must be obtained from the Office of Hazardous Materials, Department of Transportation, Washington, D.C. 20590.

- (iii) Markings must be in at least 1/4-inch figures and letters on a contrasting background.

- (iv) The printed marking of the month and year of test is not required if each is clearly indicated by other means, such as perforations on a decal.

- (n) A single-trip packaging (STC) may be reused for the shipment of any corrosive solid, ORM-A, ORM-B, ORM-C, or any material not required by this subchapter to be shipped in a DOT specification packaging and paragraph (m) of this section does not apply to these materials.

- (o) Any drum meeting one specification which has been altered to meet another specification must be capable of meeting the new specification in all respects.

- (1) Each drum so altered must be inspected, tested, and marked in accordance with paragraph (m) of this section. In addition, the drum must—

- (i) Bear the specification markings required by the specification under which it was originally manufactured, and

- (ii) Bear both the old and the new specification identification in conjunction with the markings required by paragraph (m) of this section with the specification to which the drum is converted shown last, e.g., "17E/17H". For example:

17E/17H

TESTED 2/70

DOT R1001

(29 FR 18671, Dec. 29, 1964. Redesignated at 32 FR 5606, Apr. 5, 1967)

Subpart F—Corrosive Materials:
Definition and Preparation

§ 173.240 Corrosive material; definition.

(a) For the purpose of this subchapter, a corrosive material is a liquid or solid that causes visible destruction or irreversible alterations in human skin tissue at the site of contact, or in the case of leakage from its packaging, a liquid that has a severe corrosion rate on steel.

(1) A material is considered to be destructive or to cause irreversible alteration in human skin tissue if when tested on the intact skin of the albino rabbit by the technique described in Appendix A to this Part, the structure of the tissue at the site of contact is destroyed or changed irreversibly after an exposure period of 4 hours or less.

(2) A liquid is considered to have a severe corrosion rate if its corrosion rate exceeds 0.250 inch per year (IPY) on steel (SAE 1020) at a test temperature of 130° F. An acceptable test is described in NACE Standard TM-01-58.

(b) If human experience or other data indicate that the hazard of a material is greater or less than indicated by the results of the tests specified in paragraph (a) of this section, the Department may revise its classification or make the material subject to the requirements of Parts 170-189 of this subchapter.

[Amdt. 173-61, 37 FR 5947, Mar. 23, 1972; as amended by Amdt. 173-74, 38 FR 26839, Aug. 3, 1973; Amdt. 173-94, 41 FR 16074, Apr. 15, 1976]

§ 173.241 Outage.

(a) The outage (tillage) for packages containing corrosive liquids, when offered for transportation, must be in accordance with the following requirements:

(1) General outage requirements. Packagings must not be completely filled. The proper vacant space (tillage) in a tank car or other shipping container depends on the coefficient of expansion of the liquid and the maximum increase of temperature to which it will be subjected in transit.

Chapter I—Research and Special Programs Administration

§ 173.244

Outage must be calculated to the total capacity of the container.

(2) Outage requirements for packages of 110 gallons or less. Sufficient outage must be provided so that the packaging will not be liquid full at 130° F. (55° C.).

(3) Outage requirements for tank cars. In tank cars, outage must be calculated to percentage of the total capacity of the tank, i.e., shell and dome capacity combined. If the dome of the tank car does not provide sufficient outage, then vacant space must be left in the shell to make up the required outage. The outage for tank cars must not be less than 2 percent, except that outage for Specification 103A, 103D, 103C, 103E, 103A-AL, 103C-AL, 103AW, 103BW, 103CW, 103EW, 103ANW, 103A-ALW, tank cars must not be less than 1 percent.

(4) Outage requirements for cargo tanks or portable tanks. No cargo tank or portable tank, or compartment thereof, used for the transportation of any corrosive liquid shall be completely filled. The outage for cargo tanks and portable tanks must be no less than 2 percent.

[29 FR 18726, Dec. 29, 1964. Redesignated at 32 FR 6606, Apr. 5, 1967, and amended by Amdt. 173-61, 37 FR 5947, Mar. 23, 1972; Amdt. 173-94, 41 FR 16074, Apr. 15, 1976; Amdt. 173-114, 43 FR 8521, Mar. 2, 1978]

§ 173.242 Bottles containing corrosive liquids.

(a) Bottles containing corrosive liquids, as defined by § 173.240, may not be packed in the same package with any other hazardous material, except as specifically provided in paragraphs (b) and (c) of this section and §§ 173.25, 173.257, 173.258, 173.259, 173.260, 173.261, or 173.268.

(b) Bottles containing corrosive liquids cushioned by noncombustible, nonreactive absorbent material and securely packed in tightly closed metal packaging, except hydrofluoric acid which must be overpacked in a packaging other than one made of metal, may be packed with other hazardous materials. This exception does not apply to nitric acid exceeding 40-percent concentration, perchloric acid, hydrogen peroxide exceeding 52 per-

cent strength by weight, or nitrohydrochloric or nitrohydrochloric acid diluted, which may not be packed in the same package with any other article under any circumstances.

(c) Corrosive liquid solutions in securely closed bottles, in quantities necessary for preparing photographic processing mixtures and efficiently cushioned, may be packed in the same outside shipping container with required amounts of packaged chemicals not classed as hazardous materials by these regulations, provided no dangerous reaction would occur should the contents of bottles be mixed with the packaged chemicals. Marking prescribed in Part 172 of this subchapter is not required.

[Amdt. 173-105, 42 FR 28133, June 2, 1977; and Amdt. 173-116, 43 FR 31141, July 20, 1978]

§ 173.243 Closing and cushioning.

(a) All containers must be tightly and securely closed. Inside containers must be cushioned as prescribed or in any case when necessary to prevent breakage or leakage.

[29 FR 18726, Dec. 29, 1964. Redesignated at 32 FR 6606, Apr. 5, 1967]

§ 173.244 Limited quantities of corrosive materials.

(a) Limited quantities of corrosive materials for which exceptions are permitted as noted by reference to this section in § 172.101 of this subchapter are excepted from labeling (except when offered for transportation by air) and specification packaging requirements when packed according to the following paragraphs. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part 177 of this subchapter except § 177.817.

(1) Corrosive liquids in bottles having a rated capacity not over 16 ounces by volume each enclosed in a metal can packed in strong outside packaging.

(2) Corrosive liquids in metal or plastic containers having a rated capacity not over 16 ounces by volume in strong outside packaging.

(3) Corrosive solids in earthenware, glass, plastic, or paper containers of not more than 5 pounds capacity each packed in metal, wooden or fiberboard outside packaging not exceeding 25 pounds net weight each.

(4) Corrosive solids in metal, rigid fiber or composition cans or cartons of rigid plastic containers; of not more than 10 pounds capacity each, overpacked in metal, wooden or fiberboard outside containers not exceeding 25 pounds net weight each.

(b) Special exceptions for shipment of certain corrosive materials in the ORM-D class are provided in Subpart N of this Part.

129 FR 18725, Dec. 29, 1994. Redesignated at 32 FR 5096, Apr. 5, 1967, and amended by Amdt. 173-81, 37 FR 5946, Mar. 23, 1972; Amdt. 173-77, 36 FR 36470, Dec. 28, 1971; Amdt. 173-94, 41 FR 16074, Apr. 15, 1976; Amdt. 173-94A, 41 FR 40682, Sept. 20, 1976; Amdt. 173-94B, 41 FR 57069, Dec. 30, 1976.

§ 173.245 Corrosive liquids not specifically provided for.

(a) Corrosive liquids, as defined in § 173.240, other than those for which special requirements are prescribed, must be packed in specification containers constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein, as follows:

(1) Specification 1A, 1B, 1C, or 1E (§§ 178.1, 178.2, 178.3, 178.7 of this subchapter). Glass carboys in boxes, kegs, or plywood drums. Not authorized for transportation by air.

(2) Spec. 1X (§ 178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Specification 1D (§ 178.4 of this subchapter). Boxed glass carboys of not over 6.5 gallons nominal capacity which must be closed, and when reused must be reconditioned and tested, as provided in the specification; means must be provided so that acci-

Title 49—Transportation

mitated pressure in bottles may not exceed 10 pounds per square inch gauge at 130°F (55°C), or will vent at a pressure not to exceed 10 pounds per square inch gauge. Not authorized for transportation by air.

(4) Specification 6A, 5B, 5C, or 5M (§§ 178.81, 178.82, 178.83, 178.90 of this subchapter). Metal barrels or drums.

(5) Specification 5K (§ 178.88 of this subchapter). Nickel barrels or drums. Authorized only for commodities that will not react with nickel and result in container failure.

(6) [Reserved]

(7) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 178.168, 178.169, 178.170, 178.185, or 178.190 of this subchapter). Wooden boxes with inside containers which must be glass, earthenware, polyethylene or other nonfragile plastic material (bags are not authorized), not over 1 gallon each, except that inside containers up to 3 gallons are authorized when only one is packed in each outside container.

(8) Spec. 28 (§ 178.8 of this subchapter). Metal-jacketed lead carboys.

(9) Spec. 5D (§ 178.84 of this subchapter). Rubber lined metal barrels or drums. Any barrel or drum that shows evidence of damage must be tested before shipment for defects in lining in the manner prescribed in § 178.84-15(a) of this subchapter.

(10) Spec. 5H (§ 178.87 of this subchapter). Lead-lined metal barrels or drums.

(11) Spec. 43A (§ 178.18 of this subchapter). Rubber drums.

(12) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes with inside containers of polyethylene, or other non-fragile plastic material resistant to the lining, and having threaded closures or other equally efficient type closure, not over 1 gallon capacity each, suitably cushioned to prevent movement within the box. Gross weight of complete package must not exceed 65 pounds.

(13) Spec. 15P or 22C (§ 178.182 or 178.198 of this subchapter). Glued plywood or wooden box, or plywood drum as prescribed by § 178.190-2(a) of this subchapter, with spec. 2T (§ 178.21 of this subchapter) polyethylene container, or.

Chapter I—Research and Special Programs Administration

§ 173.245

(14) Spec. 17C, 17E, or 17F (§§ 178.116, 178.117, or 178.118 of this subchapter). Metal drums (single-trip) with openings not exceeding 2.3 inches in diameter.

(15) Spec. 17H (§ 178.118 of this subchapter). Metal drums (single-trip). Authorized for viscous cleaning compounds, liquid, only.

(16) Specification 6D or 37M (non-reusable container) (§§ 178.102, 178.134 of this subchapter). Cylindrical steel overpacks with inside spec. 2S, 2SL, or 2U (§§ 178.35, 178.35a, 178.24 of this subchapter) polyethylene packaging.

(17) Specification 17H, 37A or 37B (§§ 178.118, 178.131, or 178.132 of this subchapter). Metal drums (single-trip), with welded side seams, not over 5 gallons capacity each. Drums must be lined throughout with a pliable plastic material impervious to the lining.

Specification 37A and 37B metal drums must be at least 24 gauge steel. Not authorized for transportation by air.

(18) Specification 12A (§ 178.210 of this subchapter). Fiberboard boxes with inside glass, polyethylene, or other nonfragile plastic bottles, not over 5-quart capacity each. Not more than 4 inside glass bottles exceeding 5-pint capacity each shall be packed in the outside container. Shipper must have established that the completed package meets test requirements prescribed by § 178.210-10 of this subchapter.

(19) Specification 37P (§ 178.133 of this subchapter). Steel drum with polyethylene liner (non-reusable container). Authorized only for materials that will not react with polyethylene and result in container failure. Not authorized for transportation by air.

(20) Specification 16D (§ 178.187 of this subchapter). Wirebound wooden overwrap, with inside specification 2T, 2TL, 2S, or 2SL (§§ 178.21, 178.27, 178.35, 178.35a of this subchapter) polyethylene container. Not authorized for transportation by air.

(21) Specification 12P (§ 178.211 of this subchapter). Fiberboard boxes with inside specification 2U (§ 178.24 of this subchapter) polyethylene containers not over 5 gallons capacity each. Wire staples are not authorized from 12-gauge, Type 316 stainless

for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(22) Specification 16A (§ 178.185 of this subchapter). Wirebound wooden box (§ 178.185-22 of this subchapter) with inside specification 2U (§ 178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiberboard liner and top and bottom pads. Not authorized for transportation by air.

(23) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes with inside polyethylene bottles, not over 5 gallons capacity each, as specified by § 178.205-34 of this subchapter. Not more than one bottle shall be packed in one outside box.

(24) Spec. 21P (§ 178.225 of this subchapter). Fiber drum overpack with inside spec. 2S, 2SL, or 2U (§§ 178.35, 178.35a, or 178.24 of this subchapter) polyethylene container.

(25) Spec. 12A or 12B (§§ 178.210 or 178.205 of this subchapter). Fiberboard boxes with inside aluminum containers not over 5 pounds capacity each. Aluminum containers must be approved by the Bureau of Explosives.

(26) Spec. 34 (§ 178.19 of this subchapter). Polyethylene container without overpack, not over 30-gallons capacity.

(27) Specification 33A (§ 178.150 of this subchapter). Polystyrene case (non-reusable container) with inside glass bottles not over 5-pint capacity each. Not more than four 5-pint bottles may be packed in one outside packaging.

(28) Cylinders as prescribed for any compressed gas, except acetylene. All cylinder valves must be protected by one of the methods described in § 173.301(g) (1), (2), or (3). See § 173.34(c)(16).

(29) Specification MC 303 or MC 304. Tank motor vehicle meeting § 178.343-2(c) of this subchapter. Specification MC 303 must have tanks fabricated from 12-gauge, Type 316 stainless

§ 173.245a

steel. MC 303 is authorized only for phosphoric acid and solutions thereof.

(30) Specification MC 307 (§§ 178.340, 178.342 of this subchapter). Tank motor vehicle must be packaged as follows:

(31) Specification MC 306, MC 310, MC 311, or MC 312 (§§ 178.340, 178.341, 178.343 of this subchapter). Tank motor vehicles if cargo tank is constructed with bottom outlets, they must meet § 178.343-5 of this subchapter. Specification MC 306 must have tanks fabricated from 12 gauge, Type 316 stainless steel. MC 306 is authorized only for phosphoric acid and solutions thereof.

(32) Specification 103AW, 103ALW, 103ANW, 103BW, 103CW, 103EW, 105A200ALW, 111A100F2, 111A60ALW2, 111A60W2, 111A60W5 (§§ 179.100, 179.101, 179.200, 179.201 of this subchapter). Tank cars. Specification 105A200ALW tank cars authorized only for acetic anhydride.

(33) Specification 103ALW, 103DW, 103W, 104W, 111A60ALW1, 111A60W1, 111A100W3, 111A100W6, 115A60W6, or AAR206W (§§ 179.200, 179.201, 179.220 of this subchapter). Tank cars. (See Note 1.)

Note 1: Authorized only on an interim basis pending the Department's decision on use of bottom outlets for tank cars containing hazardous materials.

(34) Specification 42B (§ 178.107 of this subchapter). Aluminum drum.

(b) Except when transportation by aircraft or vessel is involved, a material classed as a corrosive material that is corrosive only to steel and does not meet the definition of any other hazard class defined in this subchapter, is excepted from the requirements of this subchapter for rail or highway when transported in a portable tank, cargo tank, or tank car constructed of materials that will not react dangerously with or be degraded by the material being transported.

Title 49—Transportation

§ 173.245a Corrosive liquids, n.o.s. shipped in bulk.

(a) Corrosive liquids, n.o.s. which are listed in the following table, may not be shipped in bulk unless they are packaged as follows:

Corrosive liquid	Authorized tank car	Authorized portable tank
Dichloromethane and mixtures.	106A30W, 112A310W	
Ethyl chlorothioformate.		DOT-31
Ethyl phosphonothioic dichloride anhydrous.	103AW, 103AW2, 111A100F2, 111A100W3	DOT-31, DOT-31, DOT-31
Ethyl phosphonous dichloride anhydrous.	103AW, 103AW2, 111A100F2, 111A100W3	DOT-31, DOT-31, DOT-31
Ethyl phosphorodichloride.	103AW, 103AW2, 111A100F2, 111A100W3	DOT-31, DOT-31, DOT-31
Methyl phosphonothioic dichloride anhydrous.	103AW, 103AW2, 111A100F2, 111A100W3	DOT-31, DOT-31, DOT-31
Methyl phosphonous dichloride anhydrous.	103AW, 103AW2, 111A100F2, 111A100W3	DOT-31, DOT-31, DOT-31
Vanadium oxytrichloride and titanium tetrachloride mixture.		DOT-31, DOT-31

¹In an unfilled tank, must be tested and shipped under conditions of use. ²Specification 103ANW tank car must be solid nickel at least 95 percent purity; all cast metal parts must be solid nickel. ³Specification 103AW tank car must have a minimum nickel content of approximately 95.7 percent. Specification 103A tank car must be lead-lined steel or must be made of steel at least 1/8 inch thick. Specification 103AW2 tank car must be lead-lined steel or made of steel with a minimum thickness of nickel cladding 1/8 inch; nickel cladding in tanks must have a minimum nickel content of at least 99 percent pure nickel. ⁴Tank must be equipped with a safety-relief valve act at not less than 100 psig. In addition, the relief valve must comply with § 173.186(k).

(b) Corrosive liquids, n.o.s., except those listed in paragraph (a) of this section, when shipped in bulk, must be packaged as prescribed by § 173.246.

(Amdt. 173-87, 38 FR 21268, Nov. 8, 1971, as amended by Amdt. 173-74, 38 FR 20839, Aug. 3, 1973; Amdt. 173-40, 39 FR 15035, Apr. 30, 1974; Amdt. 173-115, 43 FR 31141, July 20, 1978; 43 FR 35465, Aug. 10, 1978)

§ 173.245b Corrosive solids not specifically provided for.

(a) Corrosive solids, as defined in § 173.240, other than those for which special requirements are prescribed,

Chapter I—Research and Special Programs Administration

§ 173.247

must be packaged in containers fully complying with § 173.24, as follows:

(1) Metal, wooden, or fiberboard box or case with inside containers which must be earthenware, glass, metal, plastic, or fiber or composition board of not more than 10 pounds net weight capacity each.

(2) Fiberboard box with inside paper bags, not over 50 pounds total net capacity. When shipped by water, each box must include a moisture barrier.

(3) Fiberboard box with one inside plastic bag of not over 120 pounds net weight capacity.

(4) Metal drum.

(5) Fiber drum not exceeding 650 pounds net weight and not over 65-gallon capacity. When shipped by water, each drum must include a moisture barrier.

(6) Plastic drum or pail not exceeding 80 pounds net weight and not over 7-gallon capacity.

(7) Bag. Each bag filled to weight with product and closed as for shipment must be capable of withstanding four drops from a height of 4 feet onto a solid surface, one drop on each end and one drop on each face, without sifting or rupture. Authorized net weight not to exceed 110 pounds. When shipped by water, each bag must include a moisture barrier.

(8) Metal portable tank or closed bin not over 7,000 pounds gross weight.

(9) Fiberglass or rubber tank or closed bin of not over 74-cubic-foot capacity.

(10) Metal sift-proof cargo tank or tank car, or hopper-type or pneumatic bulk vehicle.

(Amdt. 173-81, 37 FR 5919, Mar. 23, 1972, as amended by Amdt. 173-74, 38 FR 20839, Aug. 3, 1973; Amdt. 173-105, 42 FR 28133, June 2, 1977; Amdt. 173-107, 42 FR 32207, Aug. 22, 1977; Amdt. 173-120, 43 FR 37791, Sept. 7, 1978)

§ 173.246 Antimony pentafluoride, bromide, pentafluoride, iodine pentafluoride, bromine trifluoride, and chlorine trifluoride.

(a) Antimony pentafluoride must be chemically anhydrous. Materials cited in the heading of this section must be packed in specification packagings as follows:

§ 173.248 Acid sludge, sludge acid, spent sulfuric acid, or spent mixed acid.

(a) Acid sludge, sludge acid, spent sulfuric acid, or spent mixed acid, resulting from the use of sulfuric acid in various processes, not containing hydrofluoric acid, must be packaged as follows:

(1) Specification 1A, 1D, or 1E 555 178.1, 178.4, 178.7 of this subchapter. Carboys in boxes or plywood drums. Authorized only for spent sulfuric acid. Not authorized for transportation by air.

(2) **Spec. IX** (178.5 of this subchapter) Bored carboys, single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(3) Spec. 15A, 15B, 15C, 16A, or 19A
178.169, 178.169, 178.170, 178.185 or
178.190 of this subchapter). Wooden
boxes with inside containers which
must be glass or earthenware, not over
gallon each, except that inside con-
tainers up to 3 gallons are authorized
when only one is packed in each out-
side container.

(4) Specification 103A, 103AW, 103B, 103C, 103D, 103E, 103F, 103G, 103H, 103I, 103J, 103K, 103L, 103M, 103N, 103O, 103P, 103Q, 103R, 103S, 103T, 103U, 103V, 103W, 103X, 103Y, 103Z, 103AA, 103AB, 103AC, 103AD, 103AE, 103AF, 103AG, 103AH, 103AI, 103AJ, 103AK, 103AL, 103AM, 103AN, 103AO, 103AP, 103AQ, 103AR, 103AS, 103AT, 103AU, 103AV, 103AW, 103AX, 103AY, 103AZ, 103BA, 103BB, 103BC, 103BD, 103BE, 103BF, 103BG, 103BH, 103BI, 103BJ, 103BK, 103BL, 103BM, 103BN, 103BO, 103BP, 103BQ, 103BR, 103BS, 103BT, 103BU, 103BV, 103BW, 103BX, 103BY, 103BZ, 103CA, 103CB, 103CC, 103CD, 103CE, 103CF, 103CG, 103CH, 103CI, 103CJ, 103CK, 103CL, 103CM, 103CN, 103CO, 103CP, 103CQ, 103CR, 103CS, 103CT, 103CU, 103CV, 103CW, 103CX, 103CY, 103CZ, 103DA, 103DB, 103DC, 103DD, 103DE, 103DF, 103DG, 103DH, 103DI, 103DJ, 103DK, 103DL, 103DM, 103DN, 103DO, 103DP, 103DQ, 103DR, 103DS, 103DT, 103DU, 103DV, 103DW, 103DX, 103DY, 103DZ, 103EA, 103EB, 103EC, 103ED, 103EE, 103EF, 103EG, 103EH, 103EI, 103EJ, 103EK, 103EL, 103EM, 103EN, 103EO, 103EP, 103EQ, 103ER, 103ES, 103ET, 103EU, 103EV, 103EW, 103EX, 103EY, 103EZ, 103FA, 103FB, 103FC, 103FD, 103FE, 103FF, 103FG, 103FH, 103FI, 103FJ, 103FK, 103FL, 103FM, 103FN, 103FO, 103FP, 103FQ, 103FR, 103FS, 103FT, 103FU, 103FV, 103FW, 103FX, 103FY, 103FZ, 103GA, 103GB, 103GC, 103GD, 103GE, 103GF, 103GG, 103GH, 103GI, 103GJ, 103GK, 103GL, 103GM, 103GN, 103GO, 103GP, 103GQ, 103GR, 103GS, 103GT, 103GU, 103GV, 103GW, 103GX, 103GY, 103GZ, 103HA, 103HB, 103HC, 103HD, 103HE, 103HF, 103HG, 103HH, 103HI, 103HJ, 103HK, 103HL, 103HM, 103HN, 103HO, 103HP, 103HQ, 103HR, 103HS, 103HT, 103HU, 103HV, 103HW, 103HX, 103HY, 103HZ, 103IA, 103IB, 103IC, 103ID, 103IE, 103IF, 103IG, 103IH, 103II, 103IJ, 103IK, 103IL, 103IM, 103IN, 103IO, 103IP, 103IQ, 103IR, 103IS, 103IT, 103IU, 103IV, 103IW, 103IX, 103IY, 103IZ, 103JA, 103JB, 103JC, 103JD, 103JE, 103JF, 103JG, 103JH, 103JI, 103JJ, 103JK, 103JL, 103JM, 103JN, 103JO, 103JP, 103JQ, 103JR, 103JS, 103JT, 103JU, 103JV, 103JW, 103JX, 103JY, 103JZ, 103KA, 103KB, 103KC, 103KD, 103KE, 103KF, 103KG, 103KH, 103KI, 103KJ, 103KK, 103KL, 103KM, 103KN, 103KO, 103KP, 103KQ, 103KR, 103KS, 103KT, 103KU, 103KV, 103KW, 103KX, 103KY, 103KZ, 103LA, 103LB, 103LC, 103LD, 103LE, 103LF, 103LG, 103LH, 103LI, 103LJ, 103LK, 103LL, 103LM, 103LN, 103LO, 103LP, 103LQ, 103LR, 103LS, 103LT, 103LU, 103LV, 103LW, 103LX, 103LY, 103LZ, 103MA, 103MB, 103MC, 103MD, 103ME, 103MF, 103MG, 103MH, 103MI, 103MJ, 103MK, 103ML, 103MN, 103MO, 103MP, 103MQ, 103MR, 103MS, 103MT, 103MU, 103MV, 103MW, 103MX, 103MY, 103MZ, 103NA, 103NB, 103NC, 103ND, 103NE, 103NF, 103NG, 103NH, 103NI, 103NJ, 103NK, 103NL, 103NM, 103NO, 103NP, 103NQ, 103NR, 103NS, 103NT, 103NU, 103NV, 103NW, 103NX, 103NY, 103NZ, 103OA, 103OB, 103OC, 103OD, 103OE, 103OF, 103OG, 103OH, 103OI, 103OJ, 103OK, 103OL, 103OM, 103ON, 103OO, 103OP, 103OQ, 103OR, 103OS, 103OT, 103OU, 103OV, 103OW, 103OX, 103OY, 103OZ, 103PA, 103PB, 103PC, 103PD, 103PE, 103PF, 103PG, 103PH, 103PI, 103PJ, 103PK, 103PL, 103PM, 103PN, 103PO, 103PP, 103PQ, 103PR, 103PS, 103PT, 103PU, 103PV, 103PW, 103PX, 103PY, 103PZ, 103QA, 103QB, 103QC, 103QD, 103QE, 103QF, 103QG, 103QH, 103QI, 103QJ, 103QK, 103QL, 103QM, 103QN, 103QO, 103QP, 103QQ, 103QR, 103QS, 103QT, 103QU, 103QV, 103QW, 103QX, 103QY, 103QZ, 103RA, 103RB, 103RC, 103RD, 103RE, 103RF, 103RG, 103RH, 103RI, 103RJ, 103RK, 103RL, 103RM, 103RN, 103RO, 103RP, 103RQ, 103RR, 103RS, 103RT, 103RU, 103RV, 103RW, 103RX, 103RY, 103RZ, 103SA, 103SB, 103SC, 103SD, 103SE, 103SF, 103SG, 103SH, 103SI, 103SJ, 103SK, 103SL, 103SM, 103SN, 103SO, 103SP, 103SQ, 103SR, 103SS, 103ST, 103SU, 103SV, 103SW, 103SX, 103SY, 103SZ, 103TA, 103TB, 103TC, 103TD, 103TE, 103TF, 103TG, 103TH, 103TI, 103TJ, 103TK, 103TL, 103TM, 103TN, 103TO, 103TP, 103TQ, 103TR, 103TS, 103TT, 103TU, 103TV, 103TW, 103TX, 103TY, 103TZ, 103UA, 103UB, 103UC, 103UD, 103UE, 103UF, 103UG, 103UH, 103UI, 103UJ, 103UK, 103UL, 103UM, 103UN, 103UO, 103UP, 103UQ, 103UR, 103US, 103UT, 103UU, 103UV, 103UW, 103UX, 103UY, 103UZ, 103VA, 103VB, 103VC, 103VD, 103VE, 103VF, 103VG, 103VH, 103VI, 103VJ, 103VK, 103VL, 103VM, 103VN, 103VO, 103VP, 103VQ, 103VR, 103VS, 103VT, 103VU, 103VV, 103VW, 103VX, 103VY, 103VZ, 103WA, 103WB, 103WC, 103WD, 103WE, 103WF, 103WG, 103WH, 103WI, 103WJ, 103WK, 103WL, 103WM, 103WN, 103WO, 103WP, 103WQ, 103WR, 103WS, 103WT, 103WU, 103WV, 103WW, 103WX, 103WY, 103WZ, 103XA, 103XB, 103XC, 103XD, 103XE, 103XF, 103XG, 103XH, 103XI, 103XJ, 103XK, 103XL, 103XM, 103XN, 103XO, 103XP, 103XQ, 103XR, 103XS, 103XT, 103XU, 103XV, 103XW, 103XX, 103XY, 103XZ, 103YA, 103YB, 103YC, 103YD, 103YE, 103YF, 103YG, 103YH, 103YI, 103YJ, 103YK, 103YL, 103YM, 103YN, 103YO, 103YP, 103YQ

(5) Spec. 103, ' 103-W, 111A60-F-1, 111A60-W-1 (§§ 170.200 and 179.201 this subchapter). Tank cars, produced the product is too viscous to be loaded through the dome or airway. Tanks which do not contain products or contaminants that give off flammable vapors may be equipped with safety vents incorporated.

The use of existing tanks authorized but new construction not authorized.

\$ 173.249

ing lead discs having a 1/8-inch breather hole in the center thereof.

(6) Specification MC 310, MC 311, or MC 312 (§ 178.343 of this subchapter). Tank motor vehicles.

(7) Spec. 60 (\$178,255 of this subchapter). Portable tanks.

29 FR 18725, Dec. 29, 1964, as amended by 41 FR 31070, July 1, 1966; Order 73, 42 FR 3486, Mar. 2, 1967. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by 41 FR 173-70, 39 FR 15036, Apr. 30, 1974; 41 FR 173-94, 41 FR 16075, Apr. 15, 1976)

173.249 Alkaline corrosive liquids, n.o.s.; Alkaline liquids, n.o.s.; Alkaline corrosive battery fluid; Potassium fluoride solution; Potassium hydrogen fluoride solution; Sodium aluminate, liquid; Sodium hydroxide solution; Potassium hydroxide solution; Beller compound, liquid, solution.

(a) Alkaline corrosive liquids, n.o.s.; alkaline liquids, n.o.s.; Alkaline corrosive battery fluid; Potassium fluoride solution; Potassium hydrogen fluoride solution; Sodium aluminate, liquid; Sodium hydroxide solution; Potassium hydroxide solution; Boiler compound solution when offered for transportation by carriers by rail freight, highway, or water must be packed in special containers of a design and constructed of materials that will not react dangerously with or be decomposed by the chemical packed therein as follows:

(1) In containers prescribed in 173.245.

(2) Spec. 15A, 15B, 15C, 16A, or 19A¹, 17A, 16B, 17B, 16C, 17C, 18A, 18B, or 18C² (see this subchapter). Wooden boxes with glass or earthenware inside containers, not over 2 gallons each, or metal inside containers, not over 2 gallons each.

(3) Specification 5 (\$178.80 of this chapter) metal drums. Openings must not exceed 2.3 inches in diam-

(4) Spec. 17H (§ 178.118 of this subchapter). Metal drums (single-trip). Authorized only for liquid boiler compounds or liquid water treatment compounds.

5) Specification 103, 103W, 103A, 103AW, 103B, 103BW, 104, 104W, 105A100, 105A100W, 111A60F1.

¹ See footnote on previous page.

Title 49—Transportation

111A60W1, 111A60W2, 111A100F2,
111A60W5, or 111A100W4 (\$\$179,100,
179,101, 179,200, 179,201 of this sub-
chapter). Tank cars.

(b) Specification MC 303, MC 310, MC 311 or MC 312 (§ 178.343 of this subchapter). Tank motor vehicles. Specification MC 303 is authorized for oil—line corrosive liquids, n.o.s., and alkaline liquids, n.o.s. only and is not authorized for transportation by water.

(7) Specification 57 or 60 (§§ 178.253, 178.255 of this subchapter). Portable tanks. Specification 57 portable tank not authorized for transportation by water.

(K) Spec. 12B (\$178,205 of this subchapter). Fiberboard boxes with glass inside containers of not over 16 ounces capacity each.

(0) [Reserved]

(10) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes, with not more than one glass inside container and not over 1 gallon capacity containing sodium hydroxide solution not over 25 percent strength and packed in a strong fiberboard box. Dry chemicals for photographic development process or other uses, when classified as dangerous articles contained in suitable inside packages may be packed in the same outside box. The marking requirements of § 173.312 of this subchapter, shall not apply.

(11) Spec. 29 (§ 178.226 of this subchapter). Mailing tubes, with not more than one inside polyethylene bottle not over 1-quart capacity each.

(12) Spec. 1H (§ 178.13 of this subchapter). Metal crate with inside polyethylene container spec. 2T (§ 178.21 of this subchapter).

(13) Specification 12B (9 170.205 of this subchapter). Fiberboard box with inside metal containers. Not more than four 1-gallon or six 1-quart containers may be packed in each box. Maximum gross weight may not exceed 65 pounds and the completed package must meet the test requirements of § 178.210-10 of this subchapter.

b) Alkaline corrosive liquids, n.o.s., alkaline corrosive battery fluids, n.o.s., and liquid sodium amalgamate, when offered for transportation by aircraft, must be packaged as

follows (also authorized for transportation by rail freight, highway, or water):

(1) In packagings as prescribed in paragraphs (a)(8), (10), and (11) of this section and § 173.245(a)(7) and (12).

(2) Spec. 6 or 8A (§ 178.80 or 178.81 of this subchapter). Metal barrels or drums, capacity not exceeding 10 gallons, with openings not exceeding 2.3 inches in diameter.

(3) Spec. 15A, 15B, 15C, 16A, or 19A (§ 178.168, 178.169, 178.170, 178.185, or 178.190 of this subchapter). Wooden boxes with glass or earthenware inside containers not over 1 gallon each, or with metal cans not over 5 gallons each.

(c) Limited quantities of alkaline corrosive liquids, n.o.s., alkaline liquids, n.o.s., alkaline corrosive battery fluids, and liquid sodium aluminate in inside packagings of not more than 8 fluid ounces capacity each, packed in strong outside packagings, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of breakage, are excepted from labeling (except labeling is required for transportation by air) and specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part 177 of this subchapter except § 177.817.

(d) Special exceptions for shipment of certain alkaline in the ORM-D class are provided in Subpart N of this part.

(29 FR 18725, Dec. 20, 1964. Redesignated at 32 FR 8508, Apr. 5, 1967)

Note: For amendments to § 173.249 see the list of CFR sections affected in the back of this volume.

§ 173.249a Cleaning compound, liquid; Coal tar dye, liquid; Dye intermediate, liquid; Mining reagent, liquid; and Textile treating compound mixture, liquid.

(a) A liquid cleaning compound subject to this section must not contain any corrosive material specified named in § 172.101 of this subchapter except phosphoric acid, acetic acid and not over 15 percent sodium or potassium hydroxide.

(b) A liquid dye intermediate is a ring compound, containing amino, hydroxy, sulfonic acid, or quinone group or a combination of these groups, used in the manufacture of dyes, and not otherwise specifically named in § 172.101 of this subchapter.

(c) A liquid textile treating compound mixture is a mixture used to treat woven, knit or otherwise manufactured fabrics. It does not include mixtures used only to treat fibers, filaments, or yarn used in making the fabric.

(d) Liquid coal tar dye, liquid cleaning compound, liquid dye intermediate liquid mining reagent, and liquid textile treating compound mixture must be packaged as follows:

(1) In specification packagings as prescribed in § 173.246.

(2) In packagings meeting all of the specific requirements prescribed in § 173.245 including packaging type and quantity limitations for inside packagings. The packagings are not required to meet the detailed specification requirements of Part 178 of this subchapter except that size and weight limitations for package types as prescribed in Part 178 may not be exceeded. Not authorized for shipment by aircraft.

(3) Removable (open) head fiber drum lined or coated on the inside with a plastic material, not over 55-gallon capacity. Not authorized for shipment by aircraft.

(4) Removable (open) head metal drum, not over 55-gallon capacity. Not authorized for shipment by aircraft.

(5) Removable (open) head polyethylene drum, not over 6.5-gallon capacity. Not authorized for shipment by aircraft.

(Amdt. 173-77, 36 FR 38471, Dec. 26, 1973, as amended by Amdt. 173-121, 43 FR 48644, Oct. 19, 1978)

one is packed in each outside container.

(2) Spec. 5D (§ 178.84 of this subchapter). Rubber-lined metal barrels or drums. Any such container that shows evidence of damage must be tested, before shipment, for defect in lining in the manner prescribed in spec. 5D.

(3) Spec. 43A (§ 178.18 of this subchapter). Rubber drums.

(4) (Reserved)

(5) Specification 1A, 1C, or 1K (§§ 178.1, 178.3, 178.14 of this subchapter). Carboys in boxes or kegs. Not authorized for transportation by air.

(6) Spec. IX (§ 178.5 of this subchapter). Boxed carboys; single-trip for export only. For shipment by common carriers by water to noncontiguous territories or possessions of the United States and foreign countries; shipments from inland points in the United States which are consigned to such destinations are authorized to be transported to ship side by rail freight in carload lots only and by motor vehicle in truckload lots only.

(7) Specification 1D, 1E, or 1EX (single-trip) (§§ 178.4, 178.6, 178.7 of this subchapter). Glass carboys in boxes or plywood drums, of not over 6.5 gallon nominal capacity. Means must be provided so that accumulated total pressure in bottle may not exceed 10 p.s.i.g. at 130° F. (55° C.) or will vent at a pressure not to exceed 10 p.s.i.g. Not authorized for transportation by air.

(8) (Reserved)

(9) Specification 103B, 103BW, or 111A60V5 (§§ 179.200, 179.201 of this subchapter). Tank cars. Authorized for acid not over 38 percent strength by weight. A safety vent of approved design equipped with frangible disc having 3/4-inch breather hole in center thereof or a safety vent of approved design equipped with carbon discs permitting continuous venting may be used, but may not be used for hydrochloric (muriatic) acid of 22° Baumé strength, and other fuming acids.

(10) Specification MC 310, MC 311, or MC 312 (§ 178.343 of this subchapter). The use of existing tanks authorized but new construction not authorized.

chapter). Tank motor vehicle lined with rubber or equally acid-resistant material of equivalent strength and durability. An unlined specification MC 311 or MC 312 tank motor vehicle made from Type 304L or 316 stainless steel is authorized for sodium chlorite solutions not exceeding 42 percent sodium chlorite only.

(11) Spec. 60 (§ 178.255 of this subchapter). Portable tanks, rubber-lined. (12) Specification 103CW, 111A60W7 (§§ 178.200 and 179.201 of this subchapter). Tank cars having tanks of type 304L stainless steel. Authorized for sodium chlorite solution not exceeding 42 percent sodium chlorite only.

(13) Spec. 1H, 15P, or 22C (§§ 178.13, 178.182, or 178.198 of this subchapter). Metal crate with inside polyethylene carboy; or glued plywood or wooden box; or plywood drum as prescribed by § 178.198-2(a) of this subchapter, with inside spec. 21 or spec. 27L (§§ 178.21 or 178.27 of this subchapter) polyethylene container.

(14) Specifications 17H, 37A, or 37B (§§ 178.118, 178.131, 178.132, of this subchapter). Metal drums (single-trip) not over 5 gallons capacity each. Authorized only for 15 percent or less inhibited hydrochloric (muriatic) acid solution. Drums must be lined throughout with a pliable plastic material impervious to the solution. Specifications 37A and 37B metal drums must be at least 24 gauge steel. Not authorized for transportation by air.

(15) Specification 12A or 12B (§§ 178.210, 178.205 of this subchapter). Fiberboard boxes with inside containers of polyethylene, or other nonfragile plastic material resistant to the lading (bags are not authorized, not over 1-gallon capacity each, or not more than one of 3-gallon capacity, suitably cushioned to prevent movement within the box. Gross weight of completed package must not exceed 65 pounds.

(16) Spec. 12A (§ 178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 5 pints capacity each. Not more than six 5-pint glass bottles may be packed in one outside container. Shipper must have estab-

§ 173.263 Hydrochloric (muriatic) acid; hydrochloric (muriatic) acid mixtures; hydrochloric (muriatic) acid solution, inhibited; sodium chlorite solution (not exceeding 42 percent sodium chlorite); and cleaning compounds, liquids, containing hydrochloric (muriatic) acid.

(a) Hydrochloric (muriatic) acid, hydrochloric (muriatic) acid mixtures, hydrochloric (muriatic) acid solution, inhibited, sodium chlorite solution not exceeding 42 percent sodium chlorite, and cleaning compounds, liquid, containing hydrochloric (muriatic) acid must be packed in specification containers as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 178.169, 178.169, 178.170, 178.185, or 178.190 of this subchapter). Wooden boxes with inside containers which must be glass, earthenware, polyethylene or other nonfragile plastic material resistant to the lading (bags are not authorized), not over 1 gallon each, except that inside containers up to 3 gallons each are authorized when only

lished that the completed package meets test requirements prescribed by § 178.210-10 of this subchapter.

(17) Specification 6D or 37M (non-reusable container) (§§ 178.102, 178.134 of this subchapter). Cylindrical steel overpacks with inside Specifications 25, 25L, 27, 27L, or 2U (§§ 178.35, 178.35a, 178.21, 178.27, 178.24 of this subchapter) polyethylene container.

(18) Specification 37P (§ 178.133 of this subchapter). Steel drums constructed of at least 24-gauge metal for drums exceeding 1-gallon capacity, with polyethylene liner (nonreusable container). Not authorized for transportation by air.

(19) Spec. 16D (§ 178.187 of this subchapter). Wirebound wooden overwrap, with inside spec. 2T, 27L, 25, or 25L (§§ 178.21, 178.27, 178.35, or 178.35a of this subchapter) polyethylene container.

(20) (Reserved)

(21) Spec. 12C (§ 178.206 of this subchapter). Fiberboard boxes with inside 6-gallon nominal capacity polyethylene bottles having minimum wall thickness of 0.015 inch and constructed with screw-type closures. Authorized gross weight not over 65 pounds. (See § 178.209-19 of this subchapter.)

(22) Spec. 21P (§ 178.225 of this subchapter). Fiber drum overpack with inside spec. 2T, 25, 25L, or 2U (§§ 178.21, 178.35, 178.35a, or 178.24 of this subchapter) polyethylene container.

(23) Specification 12P (§ 178.211 of this subchapter). Fiberboard boxes with inside specification 2U (§ 178.24 of this subchapter) polyethylene containers not over 6 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes, except when polyethylene container is completely enclosed in inside boxes free of wire staples or other projections that could cause failures. Not authorized for transportation by air.

(24) Specification 16A (§ 178.185 of this subchapter). Wirebound wooden box (§ 178.185-22 of this subchapter) with inside specification 2U (§ 178.24 of this subchapter) polyethylene container. The polyethylene container must be separated from the wooden box by a complete corrugated fiber-

board liner and top and bottom pads. Not authorized for transportation by air.

(25) Spec. 22C (§ 178.198 of this subchapter). Plywood drum as prescribed by § 178.198-2(b), with inside spec. 27L, (§ 178.27 of this subchapter) polyethylene container not over 5 gallon nominal capacity.

(26) Spec. 33A (§ 178.150 of this subchapter). Polystyrene cases (nonreusable container) with inside glass bottles not over 6 pints capacity each. Not more than four 5-pint bottles may be packed in one outside container.

(27) Specification 12R (§ 178.212 of this subchapter). Paper-faced expanded polystyrene board box with not more than six inside glass bottles or specification 2P (§ 178.24a of this subchapter) inside polyethylene bottles, not over 6 pints capacity each.

(28) Spec. 34 (§ 178.19 of this subchapter). Polyethylene container without overpack, not over 30-gallons capacity.

(29) Specification 12R (§ 178.212 of this subchapter). Paper-faced expanded polystyrene board box with not more than four specification 2E (§ 178.24a of this subchapter) inside polyethylene bottles, not over 1-gallon capacity each.

(b) Hydrochloric acid of not over 20 percent strength (13.25° Baume) and other corrosive liquids containing not over 20 percent hydrochloric acid in addition to containers prescribed in paragraph (a) of this section may be shipped in specification containers as follows:

(1) (Reserved)

(2) Limited quantities of these materials in inside packaging of not more than 8 fluid ounces capacity each, packed in strong outside packaging, and cushioned with absorbent material in sufficient quantity to completely absorb liquid contents in the event of leakage, are excepted from labeling (except labeling is required for transportation by air) and the specification packaging requirements of this subchapter. In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part

177 of this subchapter, except § 177.817.

(c) When hydrochloric acid contains oils or solvents it must not be shipped in containers or tank cars lined with rubber.

(d) Hydrochloric acid mixtures of not over 28 percent strength, or cleaning compounds, liquid, containing not over 28 percent hydrochloric (muriatic) acid, in addition to the provisions of paragraphs (a) and (b) of this section, may be packed in specification containers as follows:

(1) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes constructed of at least 27½-pound test (Mullen or Cady) double-wall corrugated fiberboard or 32½-pound test (Mullen or Cady) double-faced corrugated fiberboard, with not more than 12 inside glass bottles, having acid-proof closures, of not over 32 ounces capacity each. Inside glass bottles must be separated and cushioned by suitable corrugated fiberboard partitions. The box must be equipped with top and bottom pads. (See § 178.205-32 of this subchapter.)

(2) Spec. 12A (§ 178.210 of this subchapter). Fiberboard boxes with inside glass bottles not over 1 gallon capacity each. Not more than 4 inside containers shall be in the outside container. Shipper must have established that the completed package meets test requirements prescribed by § 178.210-10 of this subchapter.

(e) Special exceptions for the shipment of certain dilute hydrochloric acid solutions in the ORM-D class are provided in Subpart N of this part.

129 FR 18726, Dec. 29, 1964. Redesignated at 32 FR 6806, Apr. 5, 1967.

NOTE: For amendments to § 173.263 see the list of CFR sections affected in the back of this volume.

§ 173.264 Hydrofluoric acid; White acid.

(a) Hydrofluoric acid and white acid (ammonium bifluoride and hydrochloric acid mixture), each must be packed in specification packaging as follows:

(1) Spec. 15A, 15B, 15C, 16A, or 19A (§§ 178.169, 178.170, 178.176, 178.185, or 178.190 of this subchapter). Wooden boxes with inside containers of natural

rubber, ceresine, lead, or other hydrofluoric acid resistant material. These containers are authorized only for strengths of acid for which they are adequate, but in no case may the strength of acid exceed 70 percent.

(2) Specification 12B (§ 178.205 of this subchapter). Fiberboard boxes with Specification 2E (§ 178.24a of this subchapter) inside polyethylene bottles or inside receptacles of not over 1 pound capacity each, made of natural rubber, lead, or other hydrofluoric resistant plastic. Authorized only for acid not over 70 percent in strength.

(3) Spec. 16D (§ 178.187 of this subchapter). Wirebound wooden overwrap, with inside spec. 2T (§ 178.21 of this subchapter) polyethylene container. Authorized for hydrofluoric acid not over 70 percent strength.

(4) Specification 12A or 12B (§§ 178.210, 178.206 of this subchapter). Fiberboard boxes with not more than four Specification 2E (§ 178.24a of this subchapter) inside polyethylene bottles, having a minimum thickness of 0.030 inch and not over 1 gallon (nominal) capacity each. Bottle closures must be made airtight by sealing with pressure-sensitive plastic tape or other equally efficient means. Authorized for acid not over 70 percent strength. Authorized gross weight for Specification 12B fiberboard boxes not over 65 pounds; Specification 12A not over 80 pounds.

(5) (Reserved)

(7) Spec. 5A (§ 178.81 of this subchapter). Unlined metal barrels or drums which have been subjected to adequate passivation or neutralization process (see Note 1). Authorized only for acid of not less than 60 percent and not more than 80 percent strength and all containers must be filled to not over 80 percent of capacity at 68° F. If containers are washed out with water, they must be repassivated before re-shipment. (See Notes 1, 2, 3 and 5.)

NOTE 1: Each metal container, before being put into service must be passivated by an efficient method.

NOTE 2: Containers not exceeding 55 gallons capacity each are authorized for carload, truckload, less-than-carload, and less-than-truckload shipment. Containers exceeding 55 gallons capacity each are authorized for carload or truckload shipments only.

but they must be loaded by consignor and unloaded by consignee.

Nor 3: For less-than-carload or less-than-truckload shipments, containers must be of metal at least as heavy as 14 gauge United States standard for not over 20 gallons capacity each or 12 gauge for not over 55 gallons capacity each. Each container must be subjected to at least one of the following tests before shipment: By interior pressure of at least 10 pounds per square inch before filling or by holding for inspection for at least 24 hours after filling. In either case, each container must be vented prior to shipment.

Nor 4: (Reserved)

Nor 5: Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent, when shipped in unlined steel containers, must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

(8) Specification 103A, 103AW, 105A100, 105A100W, 111A100F2, 111A60W2, 111A100W4, or ARA-IV¹ (§§ 179.101, 179.200, 179.201 of this subchapter). Unlined metal tanks which have been subjected to adequate passivity or neutralization process. (See Note 1 to paragraph (a)(7) of this section.) Authorized only for hydrofluoric acid of 60 to 80 percent strength. If tanks are washed out with water they must be resubjected to passivity before reshipment.

(i) Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent, when shipped in unlined metal tank cars must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

"HYDROFLUORIC ACID" in accordance with the requirements of § 172.330 of this subchapter.

(9) Spec. 43A (§ 178.18 of this subchapter). Rubber drums. Authorized only for acid not over 65 percent strength. Any such container showing evidence of damage must be tested to 20 pounds hydrostatic pressure, without leakage, before using.

(10) Spec. 6D (§ 178.84 of this subchapter). Lined metal barrels or drums. Authorized only for acid not over 62 percent strength. Any barrel

¹ The use of existing tanks authorized but new construction not authorized.

Title 49—Transportation

or drum that shows evidence of damage must be tested before shipment for defects in filling in the manner prescribed in § 178.84-18(a) of this subchapter. Lining materials must meet the test prescribed in Notes 1, 2, and 3 below.

Nor 1: Performance test. Test panels of lining for drums in hydrofluoric acid service must be subjected to a test in 62 percent hydrofluoric acid for a period of not less than 90 days. At the end of such period there must be no signs of deterioration of such lining material from chemical attack as evidenced by changes in its physical characteristics, and no signs of permeation of hydrofluoric acid through the sample as evidenced by blistering from the metal insert.

Nor 2: Method of test. The test panel should be at least 2 inches by 6 inches with a steel insert completely covered by lining material. Test panels should be immersed in 62 percent hydrofluoric acid so that 80 percent of the panel is in contact with liquid and 80 percent in contact with vapor. Temperature of test to be maintained at 130° F. for the entire 90 days.

Nor 3: Drums must be lined with material at least as thick as the sample material tested.

(11) Specification 103B, 103BW, 111A100W4, or 111A60W5 (§§ 179.200, 179.201 of this subchapter). Tank cars, rubber-lined tanks. Authorized only for acid not over 40 percent strength except Specification 111A100W4 tanks are authorized only for acid of 70 percent strength.

(12)-(13) (Reserved)

(14) Specification MC 310, MC 311, or MC 312 (§ 178.343 of this subchapter). Tank motor vehicles.

Nor 1: Hydrofluoric acid solutions and concentrations of 60 percent up to 65 percent, when shipped in unlined tank motor vehicles, must be inhibited so that the corrosive effect on steel must not be greater than that of hydrofluoric acid of 65 percent concentration.

(15) (Reserved)

(16) Spec. 15P or 22C (§§ 178.182 or 178.198 of this subchapter). Glined plywood or wooden box, or plywood drum as prescribed by § 178.198-2(a) of this subchapter, with inside spec. 2T (§ 178.21 of this subchapter) polyethylene container. Authorized for acid not over 70 percent strength.

(17) Specification 6D (§ 178.102 of this subchapter) or 37M (nonreusable)

¹ Use of existing tank cars authorized, but new construction not authorized.

Chapter I—Research and Special Programs Administration

ble) (§ 178.134 of this subchapter) cylindrical steel overpacks with inside specifications 2S, 2SL, or 2T (§§ 178.35, 178.35a, 178.21 of this subchapter) polyethylene liners. Specification 37M overpack of over 18-gallon capacity must be constructed of at least 20-gauge steel. Authorized only for acid of not over 70 percent strength.

(18) Specification 34 (§ 178.19 of this subchapter). Polyethylene container without overpack, not over 8-gallon capacity. Authorized only for hydrofluoric acid not over 52 percent strength.

(19) Spec. 12P (§ 178.211 of this subchapter). Fiberboard boxes with one inside spec. 2TL (§ 178.27 of this subchapter) polyethylene bottle with screw-cap closure and having minimum wall thickness of 0.015 inch, not over 8 gallons capacity each. Wire staples are not authorized for assembly or closure of boxes when any such staple is in direct contact with the inside plastic container. Authorized only for acid of 48 to 52 percent strength.

(b) Hydrofluoric acid, anhydrous (hydrogen fluoride) must be shipped in specification containers as follows:

(1) Specification 3", 3A, 3AA, 3B, 3C, 3E, 4, 4A, 25", or 38" (§§ 178.36, 178.37, 178.38, 178.40, 178.42, 178.46, 178.49 of this subchapter); also specification 4B, 4DA, 4BW or 4C (§§ 178.50, 178.51, 178.81, 178.52 of this subchapter) if not brazed. Cylinders. Filling density must not exceed 85 percent of the pounds water weight capacity of the cylinder. Cylinders used exclusively in this service may, in lieu of the periodic hydrostatic retent required by § 173.34(e), be given a complete external visual inspection at the time such periodic retent becomes due. Such inspections shall be made only by competent persons and shall be made on cylinders cleaned to bare metal and results recorded on a suitable data sheet, completed copies of which shall be kept as prescribed in § 173.34(c)(6). Points to be checked and recorded on these data sheets are: Date of inspection (month and year); DOT specification number; cylinder identification (registered symbol and serial number, date of manufacture, and if needed for

adequate identification, ownership symbol); tare weight; physical condition (record specifically, if present; leakage; corrosion; gouges, dents or digs in shell or heads, broken or damaged footing or protective ring or fire damage); disposition of cylinders (returned to service, to cylinder manufacturer for repairs, or scrapped). A cylinder which passes the inspection prescribed shall have the data recorded in the manner presently prescribed for the recording of the retent date except that an "E" is to follow the date (month and year) indicating recalculation by the external inspection method. Cylinders removed from this service for any reason must be rendered unfit for any other regulatory service (see § 173.28(1)).

(2) Specification 105A300W, 112A400W, 114A400W, or ARA-V" (§§ 179.100, 179.101 of this subchapter). Tank cars equipped with special valves and appurtenances approved for this particular service. Filling density must not exceed 90 percent of the pounds water weight capacity of the tank. For Specification 114A400W tanks, valves and fittings must be located on top of the tank. Bottom openings in tank prohibited.

(i) Each tank car must be marked "HYDROGEN FLUORIDE" in accordance with the requirements of § 172.330 of this subchapter.

(3) Specification MC 310, MC 311, or MC 312 (§ 178.343 of this subchapter). Tank motor vehicles.

(4) Spec. 61 (§ 178.245 of this subchapter). Portable tanks.

(5) (Reserved)

(6) Specification 100A600X or 110A600W (§§ 179.300, 179.301 of this subchapter) tanks. Tanks may not be equipped with safety devices of any type and valves must be protected by metal caps. Tanks may not be filled to a density in excess of 85 percent of the water weight capacity of the tank. (See § 177.534(m) of this subchapter for special requirements for highway shipments.)

(c) Containers must not be entirely filled. Unless otherwise provided in this part, sufficient outage (vacant

¹ See footnote on previous page.

§ 173.265

space) must be allowed so that the liquid portion will not completely fill the container at 130° F. in order to prevent leakage or distortion of containers due to the expansion of the contents from increase in temperature during transit.

(29 FR 18725, Dec. 29, 1964. Redesignated at 32 FR 5606, Apr. 5, 1967)

NOTE: For amendments to § 173.264 see List of CFR sections affected in the back of this volume.

§ 173.355

Openings in tank heads to facilitate application of nickel lining are authorized on tank cars constructed before January 1, 1976. These openings must be closed in an approved (§ 176.3 of this subchapter) manner.

(5) Specification MC 330 or MC 331 (§ 176.337 of this subchapter) (see Note 1). Tank motor vehicles authorized for motor fuel antiknock compound only.

NOTE 1: Spec. MC 309, MC 301, MC 302 or MC 303 (§§ 176.321, 176.323, or 176.324 of this chapter) tank motor vehicles in motor fuel antiknock compound service prior to October 1, 1955 may be continued in service.

(6) Spec. 51 (§ 176.245 of this subchapter). Portable tanks having a minimum design pressure of 100 pounds per square inch. Authorized for motor fuel antiknock compound only.

(7) Spec. 12B (§ 178.205 of this subchapter). Fiberboard boxes constructed on at least 375-pound test (Mullen or Cady) solid fiberboard with inside metal cans enclosed in hermetically sealed (soldered) metal cans, not over 5 pounds capacity each. Each inside metal container must be enclosed in a taped, double-faced corrugated liner constructed of at least 200-pound test (Mullen or Cady) fiberboard and filled with die-cut end caps constructed of at least 200-pound test (Mullen or Cady) double-walled corrugated fiberboard. Authorized gross weight not over 90 pounds.

(b) Outage must be sufficient to prevent any container from becoming entirely filled with liquid at 130° F.

(c) Steel tank conforming or equivalent to ASME specifications which contain solid or semisolid residual motor fuel antiknock compound (including rust, scale, or other contaminants) may be shipped by rail freight or highway. The tank must have been designed and constructed to be capable of withstanding full vacuum. All openings must be closed with gasketed blank flanges or vapor tight threaded closures. Each tank must be secured and braced to prevent movement under conditions normally incident to transportation

Use of existing cargo tanks authorized, but new construction not authorized.

§ 173.354 Motor fuel antiknock compound or tetraethyl lead.

(a) Motor fuel antiknock compound (a mixture of one or more organic lead compounds such as tetraethyl lead, triethylmethyl lead, diethylmethyl lead, ethylmethyl lead, and tetramethyl lead, with one or more halogen compounds such as ethylene dibromide and ethylene dichloride, hydrocarbon solvents or other equally efficient stabilizers) or tetraethyl lead must be packed in specification containers as follows:

(1) Spec. 15A (§ 176.168 of this subchapter). Wooden boxes with inside flasks or earthenware containers of not over 1 pint capacity each, or metal cans, enclosed in hermetically sealed (soldered) metal cans, spec. 2A (§ 176.20 of this subchapter).

(2) Spec. 5 or 5A (§§ 176.60 or 176.61 of this subchapter). Metal barrels or drums, with openings not exceeding 2.3 inches in diameter.

(3) Cylinders as prescribed for any compressed gas, except acetylene.

(4) Specification 105A300-W (§§ 179.100 and 179.101 of this subchapter). Tank car. Each tank car must be marked "MOTOR FUEL ANTIKNOCK COMPOUND" in accordance with the requirements of § 172.330 of this subchapter. Tank car not authorized for tetraethyl lead.

Title 49—Transportation

(29 FR 18753, Dec. 29, 1964. Redesignated at 32 FR 5606, Apr. 5, 1967)

NOTE: For amendments to § 173.354 see the List of CFR sections affected in the back of this volume.

§ 173.355 Phenylchlorarsine.

(a) Phenylchlorarsine must be packed in specification containers as follows:

(1) Spec. 5A (§ 178.81 of this subchapter) Metal barrels or drums, made of not less than 12 gauge steel, and limited to 30 gallons capacity, with openings not exceeding 2.3 inches in diameter. Each metal barrel or drum must be tested before each filling to 20 pounds hydrostatic test.

(29 FR 18753, Dec. 29, 1964. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by Amdt. 173-94, 41 FR 16084, Apr. 16, 1976)

§ 173.505

and crew in the event of leakage during transportation.

(2) An ORM-D material is a material (including a solid when wet, with water) capable of causing significant damage to a transport vehicle or vessel from leakage during transportation. Materials meeting one or both of the following criteria are ORM-B materials:

(1) A liquid substance that has a corrosion rate exceeding 0.250 inch per year (IPY) on aluminum (nomenclature 7075-T6) at a test temperature of 130° F. An acceptable test is described in NACE Standard TM-01-69.

(11) Specifically designated by name in § 172.101 of this subchapter.

(3) An ORM-C material is a material which has other inherent characteristics not described as an ORM-A or ORM-B but which make it unsuitable for shipment, unless properly identified and prepared for transportation. Each ORM-C material is specifically named in § 172.101 of this subchapter.

(4) An ORM-D material is a material such as a consumer commodity which, though otherwise subject to the regulations of this subchapter, presents a limited hazard during transportation due to its form, quantity and packaging. They must be materials for which exceptions are provided in § 172.101 of this subchapter. A shipping description applicable to each ORM-D material or category of ORM-D materials is found in § 172.101 of this subchapter.

§ 173.506 Exceptions for Other Regulated Material (ORM).

(a) The following ORM materials, unless otherwise provided in § 172.101 of this subchapter, are not subject to the requirements of this subchapter, except §§ 173.6 and 173.24 and Subparts C and D of Part 172, when packaged as follows:

- (1) ORM-A, B, or C liquid, not over one pint in one packaging;
- (2) ORM-A or B solid, not over five pounds in one packaging;
- (3) ORM-C solid, not over twenty-five pounds in one packaging.

§ 173.510 General packaging requirements.

(a) Except as provided in § 173.505, ORM materials must be prepared for

Title 49—Transportation

shipment in compliance with the following:

(1) Each material must be offered for transportation and transported in compliance with Subparts B, C, and D of Part 172 of this subchapter and Subpart A of Part 173.

(2) For packagings of 110 gallon capacity or less, sufficient oilage (ullage) must be provided so the packaging will not be liquid full at 130° F. (55° C.).

(3) When a liquid or solid has an absolute vapor pressure exceeding 16 p.s.i. at 100° F. (38° C.), the primary packaging must be capable of withstanding the inside vapor pressure at 130° F. without leakage.

(4) Any material classed as an ORM material, which may cause a hazard in transportation due to its reaction with water, must be packaged with either an inner or outer water proof packaging.

Subpart J—Other Regulated Material; Definition and Preparation

Source: Amdt. 173-94, 41 FR 10087, Apr. 16, 1976, unless otherwise noted.

§ 173.500 Definitions.

(a) For the purpose of this subchapter, and Other Regulated Material (ORM) A, B, or C is any material that does not meet the definition of a hazardous material, other than a combustible liquid in packagings having a capacity of 110 gallons or less, and is specified in § 172.101 as an ORM material or that possesses one or more of the characteristics described in the following groups.

Note 1: An ORM with a flash point of 100° to 200° F. when transported with more than 110 gallons in one container shall be classed as a combustible liquid.

(1) An ORM-A material is a material which has an anesthetic, irritating, noxious, toxic, or other similar property and which can cause extreme annoyance or discomfort to passengers

Spec.	Part 178	Title 49—Transportation
178.35	Specification 28; polyethylene packaging.	178.90 Specification 8AL; steel cylinders with approved porous filling for acetylene.
178.35a	Specification 28L; molded or thermoformed polyethylene packaging.	178.91 Specification 4BW; welded steel cylinders made of definitely prescribed steels with electric-arc welded longitudinal seam.
Subject C—Specifications for Cylinders		
178.36	Specification 3A; seamless steel cylinders or 3AX; seamless steel cylinders of capacity over 1,000 pounds water volume.	178.95 Specification 39; non-reusable (non-refillable) cylinder.
178.37	Specification 3AA; seamless steel cylinders made of definitely prescribed steels or 3AAX; seamless steel cylinders made of definitely prescribed steels of capacity over 1,000 pounds water volume.	178.96 Specification 4E; welded aluminum cylinders.
Subject D—Specifications for Metal Barrels, Drums, Kegs, Cases, Tunks, and Boxes		
178.38	Specification 3B; seamless steel cylinders.	178.99 Specification 5; steel barrels or drums.

178.51	Specification 4BA; welded or brazed steel cylinders made of definitely prescribed steels.	178.98 Specification 6B; steel barrels or drums.
178.52	Specification 4C; welded and brazed steel cylinders.	178.99 Specification 6C; steel barrels or drums.
178.53	Specification 4D; inside containers, welded steel for aircraft use.	178.100 Specification 6J; steel barrels and drums.
178.54	Specification 4B240-F1.W; welded or brazed cylinders with fusion-welded longitudinal seam.	178.101 Specification 6K; steel barrels or drums.
178.55	Specification 4B240ET; welded and brazed cylinders made from electric resistance welded tubing.	178.102 Specification 6D; cylindrical steel overpack, straight sided, for inside plastic container.
178.56	Specification 4A4489; welded steel cylinders made of definitely prescribed steels.	178.103 Specification 6L; metal packaging.
178.57	Specification 4L; welded cylinders insulated.	178.104 Specification 6M; metal packaging.
178.58	Specification 4DA; inside containers, welded steel for aircraft use.	178.107 Specification 42B; aluminum drums.
178.59	Specification 4; steel cylinders with approved porous filling for acetylene.	178.108 Specification 42C; aluminum barrels or drums.
		178.109 Specification 42D; aluminum drums.
		178.110 Specification 42F; aluminum barrels or drums.
		178.111 Specification 42G; aluminum drums.
		178.112 Specification 42H; aluminum drums; removable head containers not authorized.
		178.115 Specification 17C; steel drums.

Spec.	Part 178	Title 49—Transportation
178.7	Specification 1E; glass carboys in plywood drums.	
178.8	Specification 28; metal-jacketed lead carboys.	
178.9	Specification 28A; metal-jacketed lead carboys.	
178.12	Specification 34B; aluminum carboys.	
178.13	Specification 1H; polyethylene carboys in low carbon steel or other equally efficient metal casing.	
178.14	Specification 1K; glass carboys cushioned with expandable polystyrene in wooden wirebound box outside container.	
178.15	Specification 31; jugs in tubs.	
178.16	Specification 35; non-reusable molded polyethylene drum for use without overpack; removable head required.	
178.18	Specification 43A; rubber drums.	
178.19	Specification 34; reusable molded polyethylene container for use without overpack. Removable head not authorized.	
Subject B—Specifications for Inside Containers, and Linings		
178.20	Specification 2A; inside containers, metal cans, pails and kila.	
178.21	Specification 2T; polyethylene container.	
178.22	Specification 2C; inside containers, corrugated fiberboard cartons.	
178.23	Specification 2D; inside containers, duplex paper bags.	
178.24	Specification 2U; molded or thermoformed polyethylene containers having rated capacity of over one gallon. Removable head containers or containers fabricated from film not authorized.	
178.24a	Specification 2E; inside polyethylene bottle.	
178.25	Specification 2F; inside metal containers and liners.	
178.26	Specification 2G; inside containers, fiber and boxes.	
178.27	Specification 27L; polyethylene containers.	
178.28	Specification 2J; inside containers, waterproof paper bags for linings.	
178.29	Specification 2K; inside containers, paper bags for linings.	
178.30	Specification 21; lining for boxes.	
178.31	Specification 2M; waterproofed paper lining.	
178.32	Specification 2N; inside containers, metal cans.	
178.33	Specification 2T; inside nonrefillable metal containers.	
178.33a	Specification 2Q; inside nonrefillable metal containers.	
178.34	Specification 2R; inside containerment vessel.	

PART 178—SHIPPING CONTAINER SPECIFICATIONS

178.0	Purpose, scope, and applicability.
Subject A—Specifications for Carboys, Jugs in Tubs, and Rubber Drums	
178.1	Specification 1A; boxed carboys.
178.2	Specification 1B; boxed lead carboys.
178.3	Specification 1C; carboys in kegs.
178.4	Specification 1D; boxed glass carboys.
178.5	Specification 1X; boxed carboys, 5 to 6½ gallons, for export only.
178.6	Specification 1EX; glass carboys in plywood drums.

Sec.	
178.116	Specification 17E; steel drums.
178.119	Specification 17F; steel drums.
178.118	Specification 17I; steel drums.
178.119	Specification 17X; steel barrels or drums.
178.120	Specification 20PP phenolic-foam insulated, metal overpack.
178.121	Specification 21PP fire and shock resistant, phenolic-foam insulated, metal overpack.
178.120	Specification 37K; steel drums.
178.121	Specification 37A; steel drums.
178.122	Specification 37B; steel drums.
178.123	Specification 37P; steel drums with polyethylene liner.
178.124	Specification 37M; cylindrical steel overpack, straight sided for inside plastic container; nonreusable containers.
178.135	Specification 37C; steel drums.
178.136	Specification 37E; aluminum drums.
178.137	Specification 37D; steel drum. Non-reusable container. Open-head not authorized.
178.140	Specification 13; metal kegs.
178.141	Specification 12A; metal drums.
178.146	Specification 32A; metal cases, riveted or lock welded.
178.147	Specification 32B; metal cases, welded or riveted.
178.148	Specification 32C; metal trunks.
178.149	Specification 32D; metal boxes for old and worn-out motion-picture film no longer exhibitable.
178.150	Specification 32A; polystyrene cases. Nonreusable container.

**Subject E—Specifications for Wooden Barrels,
Kegs, Boxes, Kits, and Drums**

178.156	Specification 10B: wooden barrels kegs (light).
178.158	Specification 14: wooden boxes, nailed.
178.158	Specification 16A: wooden boxes, nailed.
178.158	Specification 18B: wooden boxes, nailed.
178.170	Specification 18C: wooden boxes, nailed.
178.171	Specification 18D: wooden boxes, nailed.
178.172	Specification 19E: wooden boxes, fiberboard lined.
178.176	Specification 19I: wooden boxes with inside containers for desiccant liquid explosives.
178.177	Specification 19M: wooden boxes, metal lined, with inside containers for desiccant liquid explosives.
178.181	Specification 19X: wooden boxes for two five-gallon cans.
178.182	Specification 19P: slatted plywood or wooden box for inside containers.

Sec.

78.178.188 Specification 16A; plywood or wooden boxes, wirebound.

78.178.189 Specification 16B; wooden boxes, wirebound.

78.178.190 Specification 16C; wooden boxes, wirebound.

78.178.191 Specification 16D; wooden wirebound overwrap for inside containers.

78.178.192 Specification 19A; wooden boxes, glued plywood canted.

78.178.193 Specification 19B; wooden boxes, glued plywood, nailed.

78.178.194 Specification 19C; wooden kila.

78.178.195 Specification 20WC wooden protective jacket.

78.178.196 Specification 21WC wooden-steel protective overpack.

78.178.197 Specification 22A; wooden drums, glued plywood.

78.178.198 Specification 22B; wooden drums, glued plywood.

78.178.199 Specification 22C; plywood drum for plastic inside container.

Subpart F—Specifications for Fibreboard Boxes, Drums, and Mailing Tubes

78.205	Specification 12B; fibreboard boxes.
78.206	Specification 12C; fibreboard boxes.
78.207	Specification 12D; fibreboard boxes.
78.208	Specification 12E; fibreboard boxes.
78.209	Specification 12H; fibreboard boxes.
78.210	Specification 12A; fibreboard boxes.
78.211	Specification 12F; fibreboard boxes. Nonreusable containers for one inside plastic container greater than 1-gallon capacity, as prescribed in Part 173 of this chapter.
78.212	Specification 12R; paperfaced expanded polystyrene board boxes. Nonreusable containers.
78.214	Specification 23F; fibreboard boxes.
78.218	Specification 23G; special cylindrical fibreboard box for high explosives.
78.219	Specification 23H; fibreboard boxes.
78.224	Specification 21C; fiber drum.
78.225	Specification 21P; fiber drum overpack for inside plastic container.
78.226	Specification 28; mailing tubes.

Subpart G—Specifications for Bags, Cloth, Burlap, Paper or Plastic

178.0

Sec.	Specification 44B; multiwall paper bags.
178.238	Specification 44B; multiwall paper bags.
178.237	Specification 44C; multiwall paper bags.
178.238	Specification 44D; multiwall paper bags.
178.239	Specification 44E; multiwall paper bags.
178.240	Specification 45B; bags, cloth and paper, lined.
178.241	Specification 44F; all-plastic bags.
Subpart H—Specifications for Portable Tanks	
178.245	Specification 51; steel portable tanks.
178.251	General design and construction requirements applicable to specifications 56 (§ 178.252) and 57 portable tanks (§ 178.253).
178.252	Specification 56; metal portable tank.
178.253	Specification 57; metal portable tank.
178.255	Specification 59; steel portable tanks.

Subpart 1--(Reserved)

Subpart J—Specifications for Containers for Motor Vehicle Transportation

17B.316 Specification MC 200; containers for liquid nitroglycerin, desiccated liquid nitroglycerin or diethylene glycol dinitrate.

17B.318 Specification MC 201; container for blasting caps, electric blasting caps and percussion caps.

17B.337 Specification MC 331; cargo tanks constructed of steel, primarily for transportation of compressed gases as defined in the Compressed Gas Section.

17B.338 General design and construction requirements applicable to specifications MC 306 (17B.341), MC 307 (17B.342), and MC 312 (17B.343) cargo tanks.

17B.341 Specification MC 306; cargo tanks.

17B.342 Specification MC 307; cargo tanks.

17B.343 Specification MC 312; cargo tanks.

Subpart K—Specifications for General Packaging

170.350 Specification 7A; general packaging, Type A.

APPENDICES TO PART 178

Appendix A—Specifications for Steel
Appendix B—Specifications for Plastics
AUTHORITY: 49 U.S.C. 1804, 1808; 49 CFR
1.53(e), unless otherwise noted.
NOTE: Nomenclature changes to Part 178
appear at 49 FR 36446 (Amdt. 178-49), Aug.

Chapter I—Research and Special Programs Administration

§ 178.1-7

Subpart A—Specifications for Carboys, Jugs in Tubs, and Rubber Drums

§ 178.1-4 Capacity and marking of carboy.
(a) Containers 5 to 13 gallons are classed as carboys. Must be embossed to indicate maker and year of manufacture; mark of maker to be registered with the MTB-TSC.

§ 178.1-5 Glass carboys.

(a) Thoroughly annealed; top of lip smooth and even; must contain at least 20 pounds of glass of 12-gallon carboys and 21 pounds for 13-gallon carboys. Glass in side walls should be well distributed and at least $\frac{1}{16}$ " thick. Defective carboys not authorized.

§ 178.1-6 Earthenware, clay, or stoneware carboys.

(a) Of acidproof material.

§ 178.1-7 Outside containers.

(a) Wooden boxes completely enclosing body of carboy or wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts, two cleats for shoes and two carrying cleats. (See paragraph (c) of this section.)

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knots that would interfere with nailing, and other defects that would materially lessen the strength.

(c) Assemblable sides and ends with grain of wood horizontal and nail as specified. Nail bottom to sides and ends; fasten top by any efficient means. Cleats for shoes to be along edges of bottom parallel to carrying cleats. (See paragraph (c) of this section.)

(d) Parts and dimension as follows:

Nominal carboy capacity not over	Minimum dimensions					Nails—sides and bottom		
	Thickness of sides, top, bottom and ends	Vertical corner posts	Carrying cleats and shoes	Spacing time not less than	Spacing time not over	Penalty	Penalty	Penalty
8 to 7	1/4"	1/4" x 3/4"	1/4" x 1 1/2"	1/4"	1/4"	1/4"	1/4"	1/4"
7 to 12	1/4"	1/4" x 3/4"	1/4" x 1 1/2"	1/4"	1/4"	1/4"	1/4"	1/4"

¹Other dimensions with cross section acceptable.
²Scenes of equal efficiency authorized.
³Specifying 8 inches acceptable along edge grain of bottom.

607

§ 178.1-8

(c) In place of bottom cleats, the following is authorized: 2 angle irons at least $1\frac{1}{2}$ " x $1\frac{1}{2}$ " x $\frac{1}{16}$ ", applied across grain of bottom boards from corner to corner, supported by acid resistant metal corner supports securely fastened to sides and ends at each bottom corner so as to raise bottom boards of box at least $\frac{1}{4}$ " above bottom of corner supports; nailing along end grain of bottom boards not required.

(f) Special box. Must comply with and dimensions must be as follows:

Carboy capacity, not over (gallons)	Minimum dimensions					Nails, sides, and bottom		
	Thickness of sides, top, and ends	Thickness of bottom	Thickness of end grain from nailing cleats	Carrying cleats and shoes	Triangular vertical corner posts	Spacing time not less than	Spacing time not over	Penalty
8 to 13	1/4"	1/4"	1/4" by 3/4"	1/4" by 3/4"	1/4"	1/4"	1/4"	1/4"

¹Scenes of equal efficiency authorized.
²Specifying 8 inches acceptable along edge grain of bottom.

(g) **Cushioning materials.** Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.1-9 Marking of outside container.

(a) On each container with letters and figures at least $\frac{1}{4}$ " inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) DOT-1A.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the MTB-TSC.

(29 FR 18612, Dec. 28, 1964. Redesignated at 32 FR 5696, Apr. 5, 1967, and amended by Amdt. 178-40, 41 FR 38160, Sept. 9, 1976)

§ 178.1-9 Tests.

(a) **Apparatus.** Standard required. Detail prints can be obtained from Bureau of Explosives.

Title 49—Transportation

this specification except as follows: Bottom of box must be nailed to 4 nailing cleats which form part of the sides and ends of box. Top of box must be reinforced by 2 cleats of $\frac{1}{4}$ "-inch lumber 4 inches wide, extending the entire width of the top at right angles to the sides of the boards forming the top; a vacant space of 1 inch between outside edge of top and cleat should be allowed for nailing top to box; parts and dimensions must be as follows:

Carboy capacity, not over (gallons)	Minimum dimensions					Nails, sides, and bottom		
	Thickness of sides, top, and ends	Thickness of bottom	Thickness of end grain from nailing cleats	Carrying cleats and shoes	Triangular vertical corner posts	Spacing time not less than	Spacing time not over	Penalty
8 to 13	1/4"	1/4"	1/4" by 3/4"	1/4" by 3/4"	1/4"	1/4"	1/4"	1/4"

¹Scenes of equal efficiency authorized.
²Specifying 8 inches acceptable along edge grain of bottom.

(g) **Cushioning materials.** Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.1-9 Marking of outside container.

(a) On each container with letters and figures at least $\frac{1}{4}$ " inch high applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:

(1) DOT-1A.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the MTB-TSC.

(29 FR 18612, Dec. 28, 1964. Redesignated at 32 FR 5696, Apr. 5, 1967, and amended by Amdt. 178-40, 41 FR 38160, Sept. 9, 1976)

608

Chapter I—Research and Special Programs Administration § 178.2-4

sentative of Bureau of Explosives, separate tests required for:

- (1) New packages (those with new outside container).
- (2) Used packages.
- (3) Packages with carboys differing over 2 gallons.
- (4) Packages differing in kind of cushioning.
- (c) Exception. Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.
- (f) Reports. Required to be made to MTB-TSC on form as follows:

Report of Tests of Carboys
(As required by D.O.T. Regulations and Specifications)

(Place) _____
(Date) _____
Test made for _____

(Give name and address of plant for which tests were made)

Description of package	Results	
	Top	Side Bottom
Capacity	1	1
Condition	2	2
Type of inside container	3	3
Cushioning	4	4
Diameter of bottle	5	5
Size of outside container (inside)	6	6
Capacity	7	7
Condition	8	8
Type of inside container	9	9
Cushioning	10	10
Diameter of bottle	11	11
Size of outside container (inside)	12	12
Capacity	13	13
Condition	14	14
Type of inside container	15	15
Cushioning	16	16
Diameter of bottle	17	17
Size of outside container (inside)	18	18
Capacity	19	19
Condition	20	20
Type of inside container	21	21
Cushioning	22	22
Diameter of bottle	23	23
Size of outside container (inside)	24	24

Specification mark is _____
Identification symbol is _____
Remarks _____
(Signature) _____
(Print) _____
State whether outside container is new or used.
State whether glass, metal, or plastic.
State whether has mineral wool, ground cork, excelsior, wood strips — type, cork pads — type, etc.

ems Administration

§ 178.4-6

(b) Gasket or lining for cap must be used and shall be resistant to lading and:

- (1) Must be liquid tight or;
- (2) Must be liquid tight up to venting pressure when such venting is prescribed for the material which is to be shipped.
- (c) At least one complete continuous thread must be engaged with gasket in place.

§ 178.4-4 Capacity and marking of carboys.

(a) Capacity. 6.5 United States gallons nominal capacity, 7.0 United States gallons overflow, tolerance plus or minus 10 fluid ounces.

(b) Marking. Each carboy bottle must be embossed in bottom as follows:

Maker's mark (to be registered with MTB-TSC.)
Year of Manufacture
DOD-ID

§ 178.4-5 Glass carboy bottle.

(a) Must be machine-blown, thoroughly and properly annealed, with screw thread finish having at least one continuous thread to accommodate closure; top of lip smooth and even; must contain 14 pounds of glass, tolerance minus 8 ounces plus 16 ounces. Minimum thickness to be .075 inch. Defective carboys not authorized.

§ 178.4-6 Outside containers.

(a) Wooden boxes completely enclosing body and neck of carboy, with 4 vertical corner posts, two cleats for shoes and two carrying cleats. An opening not exceeding 3 inches in width may be provided directly above the neck of bottle. If the top of the box is made up of not more than two pieces of lumber of 1/2 inch thickness. Bottom board of the two ends of the box must be constructed of lumber at least one inch thick, must be flush with the carrying cleats and be at least 2 1/4 inches in width. Cleats or other fasteners used to secure cover must not extend beyond carrying cleats.

(b) Lumber to be well seasoned, commercially dry, and free from decay, loose knots, knolls that would interfere with nailing, and other defects that would materially lessen the strength.

§ 178.4 Specification ID; boxed glass carboys.

§ 178.4-1 Compliance.

(a) Required in all details.

§ 178.4-2 Reseal of packages.

(a) Parts of outside container and cushioning must be replaced when broken, decayed, or inefficient in any way.

(b) Carboys with lip cracked or badly chipped not authorized; gasket seal must be even. Packages must be capable of passing tests prescribed in § 178.4-8.

§ 178.4-3 Closure.

(a) Threaded screw cap which shall be constructed of a suitable plastic or other material resistant to lading.

§ 178.4-7

(c) Assemble sides and ends with grain of wood horizontal and nail as specified. Nail bottom to sides and ends; fasten top by any efficient means (friction closure not authorized). Cleats for shoes to be along edges of bottom parallel to carrying cleats and at right angle to the direction of bottom board or boards.

(d) Parts and dimensions as follows:

Carboy capacity, nominal (gallons)	Thick-ness—Sides, bottom, and ends	Vert. Carrying cleat	Nails—Sides and bottom	
			Min.	Max.
			1/2 inch	3/4 inch

§ 178.4-8 Tests.

(a) Apparatus. Standard required. Detail prints can be obtained from Bureau of Explosives.

(b) Method. Fill with water to lower edge of neck; swing 95° measured from wall to nearest bottom edge of basket:

- (1) Slide shock; test at least 10 carboys.
- (2) Bottom shock; test at least 5 carboys.

Note 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) Acceptable results. 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) When required. By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; acceptable tests required for:

- (1) New packages (those with new outside container).
- (2) Used packages.
- (3) Packages differing in kind of cushioning.

(e) Exception. Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(f) Reports. Required to be made to MTB-TSC on form as follows:

REPORT OF TESTS OF CARBOYS
(As required by D.O.T. Regulations and Specifications)
(Place) _____
(Date) _____
Test made for _____

(Give name and address of plant for which tests were made)

Title 49—Transportation

§ 178.4-8 Tests.

(a) Apparatus. Standard required. Detail prints can be obtained from Bureau of Explosives.

(b) Method. Fill with water to lower edge of neck; swing 95° measured from wall to nearest bottom edge of basket:

- (1) Slide shock; test at least 10 carboys.
- (2) Bottom shock; test at least 5 carboys.

Note 1: In instances where 99 or less carboys are in service during either 6-month period of the year it shall be acceptable to test 10 percent of the total but not less than 3 carboys on both the side and bottom swing. If this provision is used, the report of test results must so state.

(c) Acceptable results. 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) When required. By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; acceptable tests required for:

- (1) New packages (those with new outside container).
- (2) Used packages.
- (3) Packages differing in kind of cushioning.

(e) Exception. Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

State whether outside container is new or used.
State whether glass, earthenware, clay, or stoneware.
State whether hay, mineral wool, ground cork, excelsior, wood shavings—type, cork pads—type, etc.

(g) *Internal pressure test.* Bottles shall be capable of withstanding a sustained internal pressure of 20 p. s. i. gauge for a 15-day period. Bottle manufacturer shall demonstrate to Bureau of Explosives that bottles of a proposed design will meet this test prior to start of production.
(h) *Hydrostatic pressure test.* One bottle selected at random from each 200 produced on each mold shall be subjected to an instantaneous hydrostatic pressure test to bursting. Pressure at which bottle bursts must not be less than 40 p.s.i. gauge. If bottle so tested fails at a pressure less than 40 p. s. i., 12 additional samples must be selected from the same lot of 200 bottles and tested in the same manner. All 12 samples must pass required test otherwise entire lot shall be rejected.

with nailing, and other defects that would materially lessen the strength.
(c) Assemble slides and ends with grain of wood horizontal and nail as specified; nail bottom to ends; fasten top by any efficient means.
(d) Parts and dimensions. Slides, top, and bottom at least 1/4 inch thick; vertical corner posts at least 2.25 square inches cross section; nails at least 6-penny at 2-inch intervals or 5-penny at 1 1/4-inch intervals.
(e) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.5-8 Marking of outside container.

(a) On each container with letters and figures at least 1/4 inch high, applied by hot branding iron or printing ink of a color sharply contrasting to background of package with high pressure dies as follows:
(1) DOT-1X.
(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the MTB-TSC.

(29 FR 18813, Dec. 29, 1964. Redesignated at 32 FR 5600, Apr. 8, 1967, and amended by Amdt. 178-40, 41 FR 38180, Sept. 9, 1976)

§ 178.5-9 Tests.

(a) *Apparatus.* Standard required. Detail prints can be obtained from Bureau of Explosives.
(b) *Method.* Fill with water to lower edge of neck; swing 55° measured from wall to nearest bottom edge of basket:
(1) Side shock; test at least 10 carboys.
(2) Bottom shock; test at least 5 carboys.
(c) *Acceptable results.* 90 percent of

616

Title 49—Transportation

carboys must not break under side shock; same for bottom shock.
(d) When required. By each manufacturer, and each shipper who fills and ships new carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives; separate tests required for:
(1) New packages (those with new outside container).
(2) Packages differing in kind of cushioning.
(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages obtained from a manufacturer or shipper who has had tests made.

(1) *Reports.* Required to be made to MTB-TSC on form as follows:

(29 FR 16812, Dec. 29, 1964. Redesignated at
 32 FR 5606, Apr. 5, 1967, and amended by
 Amdt. 178-21, 30 FR 10499, Sept. 15, 1971)

§ 178.6 Specification 1EX; glass carboys in
 plywood drums.
 Single trip container.

§ 178.6-1 Compliance.

(a) Required in all details.

§ 178.6-2 Lumber.

(a) To be well seasoned, commercial-
 ly dry, and free from decay, loose
 knots, knots that would interfere with
 nailing, and other defects that would
 materially lessen the strength.

§ 178.6-3 Closing devices required.

(a) As follows except when otherwise
 authorized in the packing regulations:

(1) Acidproof stoppers or other de-
 vices, with gaskets, securely fastened;
 venting closures are required when
 necessary to prevent internal pressure
 in excess of 8 pounds per square inch
 gauge at 130° F.

(2) Glass stoppers ground to fit and
 securely fastened are authorized when
 internal pressures do not exceed 8
 pounds per square inch gauge at 130°
 F.

§ 178.6-4 Capacity and marking of carboy.

(a) Containers must be 5 to 6 gal-
 lons capacity and embossed to indicate
 maker and year of manufacture.

§ 178.6-5 Glass carboys.

(a) Thoroughly annealed; top of lip
 smooth and even. Glass in side walls
 should be well distributed and at least
 1/8 inch thick. Defective carboys not
 authorized.

61

ams Administration

§ 178.7-6

(b) Closing devices required. (For
 carboys without screw thread finish.)
 As follows except when otherwise au-
 thorized in the packing regulations.

(1) Acidproof stoppers or other de-
 vices, with gaskets, securely fastened;
 venting closures are required when
 necessary to prevent internal pressure
 in excess of 8 pounds per square inch
 gauge at 130° F.

(2) Glass stoppers ground to fit and
 securely fastened are authorized when
 internal pressures do not exceed 8
 pounds per square inch gauge at 130°
 F.

§ 178.7-5 Glass carboy bottle.

(a) (Threaded screw-cap closure
 only.) Must be machine-blown, thor-
 oughly and properly annealed, with
 screw thread finish having at least one
 continuous thread to accommodate
 closure; top of lip smooth and even;
 must contain 14 pounds of glass, toler-
 ance minus 8 ounces plus 16 ounces.
 Minimum thickness to be 0.075 inch.
 Defective carboys not authorized.

(b) Closure. (1) Threaded screw cap
 which shall be constructed of a suit-
 able plastic or other material resistant
 to lading.

(2) Gasket or lining for cap must be
 used and shall be resistant to lading
 and must be liquid tight; or must be
 liquid tight up to venting pressure
 when such venting is prescribed for
 the material which is to be shipped.

(3) At least one complete continuous
 thread must be engaged with gasket in
 place.

§ 178.7-6 Outside containers.

(a) Plywood drums completely en-
 closing body of carboy or completely
 enclosing body and neck of carboy and
 constructed as follows:

(1) Lumber. To be well seasoned,
 commercially dry, and free from
 decay, loose knots, knots that would
 interfere with nailing, and other de-
 fects that would materially lessen the
 strength.

(2) Body shell. To be of two plys of
 good commercial box or sheathing
 grade hardwood veneer, each not less
 than 1/8 inch in thickness, firmly
 glued together with waterproof glue (a
 section of plywood from body shell is

619

§ 178.7-7

immersed in water at room temperature for 48 hours. If no delamination or separation of plies is apparent, the glue is deemed to be waterproof) with the grain of the outside ply parallel and the inner ply vertical to the heads. The body shall be butt-jointed and shall be fastened on the outside with a 28-gauge steel strip, not less than 1 1/4 inches in width. Staples of 17-gauge shall be driven on each side of the joint, spaced not more than 1 1/4 inches apart and clinched on inside of the body.

(3) *Heads.* To be of three plies of good commercial box or sheathing grade hardwood veneer, each not less than 1/2 inch in thickness, firmly glued together with waterproof glue (a section of plywood from head is immersed in water at room temperature for 48 hours; if no delamination or separation of plies is apparent, the glue is deemed to be waterproof), with the grain of each outer ply at right angles to the grain of the center ply. Each head shall be circled to fit snugly inside of the body. Interior heads shall be of the same construction.

(4) *Hoops.* To be of hardwood veneer, not less than 1 1/4 inches wide by 1/2 inch thick. Hoops shall be fastened to the body by 17-gauge staples on not less than 3-inch centers and shall be overlapped not less than 3 inches.

(5) *Head liners.* (Plywood drum completely enclosing body of carboy). When plywood cushioning is used the inner lining strips which support the plywood cushion shall be of hardwood veneer not less than 1/2 inch in thickness and 1/2 inch in width and shall butt or slightly gap. All other head lining strips shall be made of hardwood veneer not less than 1/2 inch in thickness and 1/2 inch in width and shall overlap not less than 3 inches. The top head liners shall be fastened by 17-gauge staples on not less than 3-inch centers. The staples shall be driven through the outer hoop and body and clinched on the inside of the veneer strips. The bottom head liners shall be fastened the same as top head liners, or, by 14-gauge staples driven through the head liner and body into the outer hoop on not less than 4-inch centers. The bottom head liners shall be fastened the same as top head liners, or, by 17-gauge staples driven through the outer hoop and body and clinched on the inside of the veneer strips on not less than 3-inch centers.

(7) *Battens.* At least 1/2 inch by 2 inches secured at each end by two nails driven through the hoops and body shell. One batten must be applied to the bottom of plywood drums, completely enclosing the body of carboys; and two battens must be applied to plywood drums completely enclosing the body and neck of carboys, one of which must be affixed to the top and the other to the bottom of the drum.

(b) *Cushioning materials.* Cushioning devices or materials must be of such type, or be so secured within the outer container, that the carboy cannot shift in a way that cushioning efficiency is reduced.

§ 178.7-7 Marking of outside container.

(a) On each container with letters and figures at least 1/2 inch high applied by hot branding iron or printing

Title 49—Transportation

the outer hoop on not less than 4-inch centers.

(6) *Head liners.* (Plywood drum completely enclosing body and neck of carboy). When plywood cushioning is used the inner lining strips which support the plywood cushion shall be of hardwood veneer not less than 1/2 inch in thickness and 1/2 inch in width and shall butt or slightly gap. All other head lining strips shall be made of hardwood veneer not less than 1/2 inch in thickness and 1/2 inch in width and shall overlap not less than 3 inches. The inside head liners and the inner liner strips for the false head and support of the top head shall be fastened by 17-gauge staples on not less than 3-inch centers. The staples shall be driven through the outer hoop and body and clinched on the inside of the veneer strips, except that the strips holding the false head shall have staples only through the body and shell liner. The top head liner which forms the final closure shall be fastened to the body by 14-gauge staples driven through the head liner and body into the outer hoop on not less than 4-inch centers. The bottom head liners shall be fastened the same as top head liners, or, by 17-gauge staples driven through the outer hoop and body and clinched on the inside of the veneer strips on not less than 3-inch centers.

(c) *Acceptable results.* 90 percent of carboys must not break under side shock and same for bottom shock, except both results must be 100 percent if modified test authorized by Note 1 of paragraph (b) of this section is used.

(d) *When required.* By each manufacturer, and each shipper who fills and ships new or used carboys; during each 6 months of each year, one series each year to be witnessed by representative of Bureau of Explosives: separate tests required for:

(1) New packages (those with new outside container).

(2) Used packages.

(3) Packages with carboys differing over 2 gallons.

(4) Packages differing in kind of cushioning.

(e) *Exception.* Tests not required by shipper who fills and ships or reships for one shipment only packages ob-

§ 178.8 Specification 24; metal-jacketed lead carboys.

§ 178.8-1 Compliance.

(a) Required in all details.

§ 178.8-2

§ 178.8-2 Size.

(a) Not over 15 gallons (nominal).

§ 178.8-3 Test.

(a) By 5 pounds internal pressure, without leakage, before each shipment.

§ 178.8-4 Parts required and dimensions.

(a) As in §§ 178.8-5 to 178.8-8.

§ 178.8-5 Carboy closing device.

(a) To consist of follower-ring with stud bolts, plate-gasket, and cap as shown in § 178.8-5.

(b) Follower-ring to be 1½" wide with machined top face, inner edges rounded off to about ¼" radius, and fitted with 4 stud bolts, fastened to prevent turning, for 2" neck and 6 bolts for larger necks.

(c) Neck of carboy to be flanged over to edge of follower-ring and may be welded out under it, inside diameter of neck not over 4".

§ 178.8-6 Outside container.

(a) Welding authorized in place of rivets shown; body rivets, if used, to be countersunk on inside.

(b) Bayonet fastenings, or other efficient method, authorized to secure top to body in place of bolts shown.

(c) Two adequate lifting handles required on body.

(d) Projections above level of top edge of body not authorized.

§ 178.8-7 Marking on each outside container.

(a) By embossing on top with raised marks ¼" high as follows (stamping authorized if clearly legible):

(1) DOT-28A.

(2) Name or symbol of person making the mark specified in paragraph (a)(1) of this section and located just above or below that mark. Symbol, if used, must be registered with the MTB-TSC.

Title 49—Transportation

§ 178.80

Subpart D—Specifications for Metal Barrels, Drums, Kegs, Cases, Trunks, and Boxes

Source: 39 FR 18893, Dec. 29, 1984, unless otherwise noted. Redesignated at 32 FR 5006, Apr. 5, 1967.

§ 178.80 Specification for steel barrels or drums.

Removable head containers which will pass all required tests are authorized.

§ 178.80-1 Compliance.

(a) Required in all details.

§ 178.80-2 Rated capacity.

(a) Rated capacity as marked, see § 178.80-1(a)(3). Actual capacity of straight-sided containers shall be not less than rated (marked) capacity plus 2 percent, nor greater than rated capacity plus 2 percent plus 1 quart, except that for containers over 30 gallons marked capacity actual capacity shall be not less than rated capacity plus 2 percent, nor greater than rated

Title 49—Transportation

capacity plus 2 percent plus 2 quarts; actual capacity of bilge-type containers must be not less than rated capacity, nor greater than rated capacity plus 2 percent plus 2 quarts.

§ 178.80-3 Composition.

(a) Sheets for body and heads to be low carbon, open hearth or electric steel. Stainless steel, when used, must be, except for rolling hoops and chime reinforcement, an austenitic 18 or 8 chrome nickel alloy with carbon content not over 0.08 percent, or other equivalent grades.

§ 178.80-5 Seams.

(a) Body seams welded.

§ 178.80-6 Chime reinforcement.

(a) Containers over 25 gallons capacity, with flanged head secured to body, to have chime reinforcement adequate for its protection.

§ 178.80-7 Parts and dimensions.

(a) Parts and dimensions as follows:

36	0.0081	0.0081
38	0.0067	0.0067
40	0.0053	0.0053

¹ Thickness shall be measured at any point on the sheet not less than ¼ inch from an edge.

Chapter I—Research and Special Progn

§ 178.88-8 Rolling hoops.

(a) Separate hoops to have tight fit on shell and be firmly secured in place. Beading under rolling hoops not permitted. Attachment to drum body by spot welding, except for continuous resistance method, not permitted. Welding of 1-bar type directly to body of drum in any manner not permitted.

§ 178.88-9 Closures.

(a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seat (flange, etc.) for plug, or cap, must have 3 or more complete threads; two drainage holes of not over 1/8-inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads when screwed home with basket in place.

(d) Full removable head drums over 5 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having 1/2 inch bolt and nut for drums not over 30 gallons capacity and 3/4 inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Equally efficient types of closures are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives.

§ 178.88-10 Defective containers.

(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

81

Title 49—Transportation

§ 178.115 Specification 17C, steel drums.

Single trip container. Removable head containers which will pass all required tests are authorized.

§ 178.115-1 Compliance.

(a) Required in all details.

§ 178.115-2 Rated capacity.

(a) Rated capacity as marked, see § 178.115-10(a)(3). Minimum actual capacity of containers shall be not less than rated (marked) capacity plus 4 percent. Maximum actual capacity shall not be greater than rated (marked) capacity plus 5 percent or rated (marked) capacity plus 4 percent plus 1 quart whichever is the greater.

§ 178.115-3 Composition.

(a) Steels for body and heads to be low carbon, open hearth or electric steel.

§ 178.115-5 Seams.

(a) Body seams welded.

§ 178.115-6 Parts and dimensions.

(a) Parts and dimensions as follows:

Marked capacity not over (gallons)	Type of container	Minimum thickness, untempered sheets (gauge)		Rolling hoops	
		Body sheet	Head sheet	Type	Size Weight (square inches or inch per foot)
5 ¹	Straight side	24	24	None	
10		20	20	do	
20		18	18	1 1/2	
35		16	16	1 1/2	

¹ Rolled or welded in hoops.

² Each removable head drum.

body must have three rolled or welded-in hoops with the underline of one not more than 3 inches from the top curb.

³ A drum of 5 1/2 gallons marked capacity is authorized for shipment of the commodity specified in § 173.332(d) of this chapter.

(b) Steel sheets of specified gauges shall comply with the following:

Gauge No.	Nominal thickness ¹ (inch)	Minimum thickness ² (inch)	Gauge No.	Nominal thickness ¹ (inch)	Minimum thickness ² (inch)
20	0.0325	0.0323	24	0.0359	0.0359
28	0.0318	0.0316	28	0.0328	0.0328

¹ Thickness shall be measured at any point on the sheet not less than 1/2 inch from an edge.

850

Chapter I—Research and Special Programs Administration

§ 178.115-10

§ 178.115-7 Convex heads.
(a) Convex (crowned) heads, not extending beyond level of chime, required for drums of 25 gallons capacity or over; minimum convexity of $\frac{1}{4}$ inch required.

§ 178.115-8 Closures.
(a) Adequate to prevent leakage; gaskets required.

(b) Closing part (plug, cap, plate, etc., see Note 1) must be of metal as thick as prescribed for head of container; this not required for containers of 12 gallons or less when the opening to be closed is not over 2.7 inches in diameter. If unthreaded cap is used it must be provided with outside sealing devices which cannot be removed without destroying the cap or sealing device.

Note 1: This does not apply to cap seal over a closure which complies with all requirements.

(c) For closure with threaded plug or cap, the seal (flange, etc.) or plug, or cap, must have 3 or more complete threads; two drainage holes of not over $\frac{1}{4}$ inch diameter are allowed. Plug, or cap, must have sufficient length of thread to engage 3 threads in place. Threaded closures having fewer threads are authorized for containers having a capacity of 12 gallons or less when such closures are approved by the Bureau of Explosives upon proof of satisfactory tests.

(1) Closures of screw-thread type or closed by other positive means, of any material or design, may be authorized by the Bureau of Explosives for use, upon satisfactory proof of efficiency.
(d) Full removable head drums over 6 gallons capacity must be closed by means of 12 gauge bolted ring with drop forged lugs, one of which is threaded, and having $\frac{1}{4}$ inch bolt and nut for drums not over 30 gallons capacity and 3/8 inch bolt and nut for drums over 30 gallons capacity. Five gallon drums must be of lug type closure with cover having at least 16 lugs. Equally efficient types of closures are authorized upon demonstration and

proof of satisfactory tests to representative of Bureau of Explosives.
(29 FR 18893, Dec. 29, 1964, as amended by Order 66, 30 FR 5755, Apr. 23, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967)

§ 178.115-9 Defective containers.
(a) Leaks and other defects to be repaired by method used in constructing container, not by soldering.

§ 178.115-10 Markings.
(a) Marking on each container by embossing on head except that such embossment must be on the permanent head for drums having removable heads, with raised marks, or by embossing or die stamping on footings on drums equipped with footings, or on metal plates securely attached to drum by brazing or welding not less than 20 percent of the perimeter, as follows:

(1) DOT-17C. The letters STC, located near the DOT mark to indicate "single-trip container." In addition, when the container is of stainless steel, the type of steel used in body and head sheets as identified by American Iron and Steel Institute type number, and also the letters HT following steel designation on containers subjected to stress-relieving or heat-treatment during manufacture (for example, DOT-17C-304 or DOT-17C-304 HT as applicable) shall be shown.

(2) Name or symbol of person making the marks specified in paragraph (a)(1) of this section. Symbol, if used, must be registered with the MTB-TSC.
(3) Gauge of metal in thinnest part, rated capacity in gallons, and year of manufacture (for example, 14-55-50). When gauge of metal in body differs from that in head, both must be indicated with slanting line between and with gauge of body indicated first (for example 14/12-55-50 for body 14 gauge and head 12 gauge).

(29 FR 18893, Dec. 29, 1964, as amended by Order 66, 30 FR 5755, Apr. 23, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967, and amended by Amdt. 178-40, 41 FR 38181, Sept. 9, 1976)

§ 178.115-11

§ 178.115-11 Size of markings.
(a) Size of markings (minimum): $\frac{1}{4}$ " high for 33 gallons or less, $\frac{3}{8}$ " for over 33 and not over 55 gallons.

§ 178.115-12 Type tests.
(a) Samples taken at random and closed as for use, shall withstand prescribed tests without leakage. Tests to be made of each type and size by each company starting production and to be repeated every 4 months. Samples last tested to be retained until further tests are made or for 1 year, whichever period is shorter. The type tests are as follows:

(1) Test by dropping, filled with water to 98 percent capacity, from height of 4 feet onto solid concrete so as to strike diagonally on chime, or when without chime seam, to strike on other circumferential seam; also additional drop test on any other parts which might be considered weaker than the chime. Closing devices and other parts projecting beyond chime or rolling hoops must also be capable of withstanding this test.

(2) Hydrostatic pressure test of 40 pounds per square inch sustained for 5 minutes; except that full removable head drums must sustain 20 pounds per square inch.
(29 FR 18893, Dec. 29, 1964, as amended by Order 66, 30 FR 5755, Apr. 23, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967)

§ 178.115-13 Leakage test.
(a) Each container shall be tested, with seams under water or covered with soapuds or heavy oil, by inferior air pressure of at least 15 pounds per square inch. Equally efficient means

of testing are authorized upon demonstration and proof of satisfactory tests to representative of Bureau of Explosives. Leakers shall be rejected or repaired and retested. Removable head containers not required to be tested with heads in place except that samples taken at random and closed as for use, of each type and size, must be tested at start of production and retested every 4 months. Samples last tested to be retained until further tests are made or for 1 year, whichever period is shorter.
(Order 66, 30 FR 5755, Apr. 23, 1965. Redesignated at 32 FR 5606, Apr. 5, 1967)

Marked capacity not over (gallons)	Type of container	Minimum thickness (gauge)		Rolling hoops	
		Body sheet	Head sheet	Minimum	Weight (pounds or inches per foot)
5	Straight side	24	24	None	24
10	40	22	22	12	36
20	40	18	18	12	48
33	40	16	16	12	60

*Rolled or swaged in hoops.
*20 gauge authorized.

APPENDIX H
CALIFORNIA HAZARDOUS WASTE MANAGEMENT PROGRAM.

OUTLINE COMPARISON
OF
FEDERAL & STATE
HAZARDOUS WASTE MANAGEMENT REGULATIONS

Explanation of abbreviations:

EPA	-United States Environmental Protection Agency
DOHS	-California State Department of Health Services
CFR	-United States Code of Federal Regulations
Cal. Ad.	-California Administrative Code
DOT	-U.S. Department of Transportation

Regulations for TRANSPORTERS of HAZARDOUS WASTE

FEDERAL	STATE
•Obtain EPA Transporters ID#.	Obtain Hazardous Waste Haulers Permit from DOHS.
•Comply with Manifest system	•Same-plus send copies of out-of-state shipment manifests to DOHS.
•Deliver entire shipment of Hazardous Waste only to designated facility.	same
•Retain Manifest copies for three years.	same
•Comply with DOT (U.S. Dept. of Transportation) Regulations pertaining to reporting of discharges and/or spills.	•Notify DOHS within 24 hours by telephone or telegraph of an accident involving Hazardous Waste. Send copy of DOT report to the California Highway Patrol.
•Clean-up any Hazardous Waste discharged during transport.	•Pick-up all Hazardous Waste and waste saturated soil which was spilled or caused during transport. Deliver to Class I disposal site.

Regulation for OPERATORS OR OWNERS of TREATMENT, STORAGE AND/OR DISPOSAL FACILITIES.

FEDERAL	STATE
•Obtain a Permit from EPA to operate a Hazardous Waste Facility. (See 40 CFR 264-265 & 122 to 124.)	•Obtain State Hazardous Waste Facilities Permit from DOHS. (See Cal. Ad., Div. 4, commencing with Section 66370.)
•For existing Facilities Part A of the Federal Permit must be filed prior to Nov. 19, 1980.	•Existing Facilities must have valid State Permit at this time.

DEPARTMENT OF HEALTH SERVICES

714/744 P STREET
SACRAMENTO, CA 95814

(916) 322-2337

JULY 1980

TO: Interested Persons

FROM: Hazardous Materials Management Section
714 P Street
Sacramento, CA 95814SUBJECT: NOTICE OF INTENT TO APPLY FOR INTERIM AUTHORIZATION TO ADMINISTER
A STATE HAZARDOUS WASTE PROGRAM PURSUANT TO SECTION 3006(c) OF THE
RESOURCE CONSERVATION AND RECOVERY ACT OF 1976 (42 USC 6901 ET SEQ.)
AND IMPLEMENTING REGULATIONS.

The State of California Department of Health Services and the State Water Resources Control Board propose to apply for Phase I Interim Authorization to administer a state hazardous waste regulatory program in lieu of, and corresponding to, the Federal hazardous waste program authorized under Public Law 94-580, the Resource Conservation and Recovery Act of 1976 (RCRA), as amended (42 USC 6901 et seq.). A public meeting will be held in Sacramento on July 30, 1980 to consider public comments about this proposal. More specific details about the meeting appear elsewhere in this notice.

RCRA requires the U. S. Environmental Protection Agency (EPA) to institute a national program to control hazardous waste. Specific regulations for implementing RCRA are set forth in the Code of Federal Regulations (40 CFR Parts 260 to 266 and 122 to 124) and become effective November 19, 1980. Section 3006 of RCRA specifically provides for a state to operate its own hazardous waste program in lieu of the Federal program, provided the state meets specific minimum requirements and, after application, achieves authorization by EPA. Congress has clearly demonstrated a preference for states to assume responsibility for controlling hazardous waste within their borders and has made Federal financial assistance available to states for developing state programs.

Title 40, CFR, Part 123 establishes minimum requirements which state hazardous waste programs must meet in order to receive EPA approval. These regulations were written to ensure consistency in hazardous waste management from state to state. The following timetable has been established by EPA for implementation of Federal standards and authorization of state programs.

● Phase I, effective November 19, 1980:

- Identification and listing of hazardous wastes;
- Standards for generators of hazardous waste;
- Standards for transporters of hazardous waste;
- Interim status standards for owners and operators of facilities that treat, store, or dispose of hazardous waste; and
- Phase I Interim Authorization of state hazardous waste programs meeting Phase I minimum requirements.

NOTICE OF INTENT

July 1980

- Phase II, effective Spring 1981:
 - Permanent status standards for owners and operators of facilities that treat, store, or dispose of hazardous waste; and
 - Phase II Interim Authorization of state hazardous waste programs meeting Phase II minimum requirements.
- Final Phase, effective 24 months after Phase II:
 - Final authorization of state hazardous waste programs meeting minimum requirements and determined by EPA to be equivalent to and consistent with the Federal program.

The California State Department of Health Services (DOHS) in cooperation with the State Water Resources Control Board (SWRCB) is in the final stages of preparing the State's application to EPA for Phase I Interim Authorization. Thus far, the State believes that the existing State Hazardous Waste Program, authorized under the California Health and Safety Code, Section 25100 et seq., in conjunction with the State Water Resources Control Program carried out pursuant to the Porter-Cologne Water Quality Control Act, California Water Code, Section 1300 et seq., is substantially equivalent to the Federal program interim authorization requirements with four exceptions:

- Existing State law and regulations require hazardous waste generators and disposal site operators to report to DOHS on a monthly basis, certain information about hazardous waste generation and disposal activities. New Federal standards, however, require generators and disposal site operators to file certain reports on an annual basis and require generators to monitor the transportation and disposal of their respective waste loads and to report within 45 days of expected disposal dates, waste loads not reaching designated disposal facilities. (40 CFR refers to such reports as "exception reporting".)

DOHS proposes to seek changes in existing law and regulations as needed to require such exception reporting by generators and to require continued monthly as well as annual reporting to DOHS.

- Existing State law and regulations require that hazardous waste generators, transporters, and facility operators utilize a hazardous waste manifest to meet certain waste identification, transportation, recordkeeping and reporting requirements. Manifest format and usage is currently prescribed by DOHS.

DOHS proposes to seek changes in existing law and regulations as needed to require the use of a form consistent with: (1) EPA and Federal Department of Transportation standards; and (2) DOHS hazardous waste identification standards.

- Existing State law and regulations require a hazardous waste facility permit applicant to obtain waste discharge requirements from a Regional Water Quality Control Board prior to being issued a hazardous waste facility permit. Such waste discharge requirements are issued only after the public has been allowed the opportunity to review and comment on proposed requirements. Also, in California, public hearings are usually

held during various local land use permit proceedings. DOHS is currently not required to hold additional public hearings prior to issuance of a hazardous waste facility permit.

Certain RCRA standards: (1) require an opportunity for public comment and, if sufficient public interest is shown, a public hearing be held, prior to the issuance of a hazardous waste facility permit; and (2) establish facility siting, monitoring and operating standards for permitted facilities.

DOHS proposes to seek changes in existing law and/or regulations as needed to require public hearings on proposed hazardous waste facility permits during final permit proceedings.

- Existing State law and regulations require persons discharging, or proposing to discharge, a waste which could affect the quality of waters in the State to file a report of the discharge with the Regional Water Quality Control Board responsible for the affected region. The Regional Board in turn prescribes certain requirements for the waste discharge to protect water quality and other beneficial uses of the receiving surface or ground water.

SWRCB proposes to review State policy and practices for prescribing waste discharge requirements for facilities subject to regulation under RCRA to determine actions necessary to bring State facility standards and ground water monitoring, closure and post closure and financial responsibility requirements into compliance with new RCRA regulations.

A public meeting to consider the proposal to apply for State program authorization and the four proposed program changes noted above, will be held in Room 102, State Office Building Number 9, 744 P Street, Sacramento, California, on July 30, 1980, at 10:00 A.M. and will continue until all present are heard.

All interested persons wishing to comment upon these proposals are invited to appear at the public meeting to present their views. Written comments may be presented at the meeting or submitted by July 30, 1980, in person to the California State Department of Health Services, Hazardous Materials Management Section, 1420 - 5th Street, Room 140, Sacramento, California, or mailed to the California State Department of Health Services, Hazardous Materials Management Section, 744 P Street, Sacramento, California 95814.

Oral statements will be received and considered, but for accuracy of the record, all such statements should be submitted in writing. Oral statements should summarize extensive written material so that there will be time for all interested persons to be heard. Persons submitting written material are encouraged to bring additional copies for the use of the meeting panel or other interested persons.

All comments received by July 30, 1980, or presented at the public meeting will be considered in the development of proposed program changes for the State's Phase I Interim Authorization Application to be submitted to EPA.

APPENDIX I

MAJOR ELEMENTS OF AN ENVIRONMENTAL
IMPACT STATEMENT/REPORT

APPENDIX I

MAJOR ELEMENTS OF AN ENVIRONMENTAL IMPACT STATEMENT/REPORT

The major elements to be included in an Environmental Impact Statement/Report are shown in Figure I-1. The following is a detailed description of these elements:

- Describe the present conditions - Requires a description of present conditions of the proposed project area, including specifics on surrounding terrain and ecosystems, existing and proposed land use, and other existing environmental and cultural features. A description of the project objective should be provided, including local, state, or federal plans, and social economic, and natural environmental goals of the area in question. Information and data adequate to permit careful assessment of the project area by commenting agencies are necessary. Where relevant, maps and/or photographs should be provided.
- Describe the alternative actions - Requires the responsible agency to study, develop, and describe appropriate alternatives relevant to the proposed objective. Consideration should be given not only to engineering, design, locational, institutional, and operational alternatives, but also to maintaining the status quo. Information and

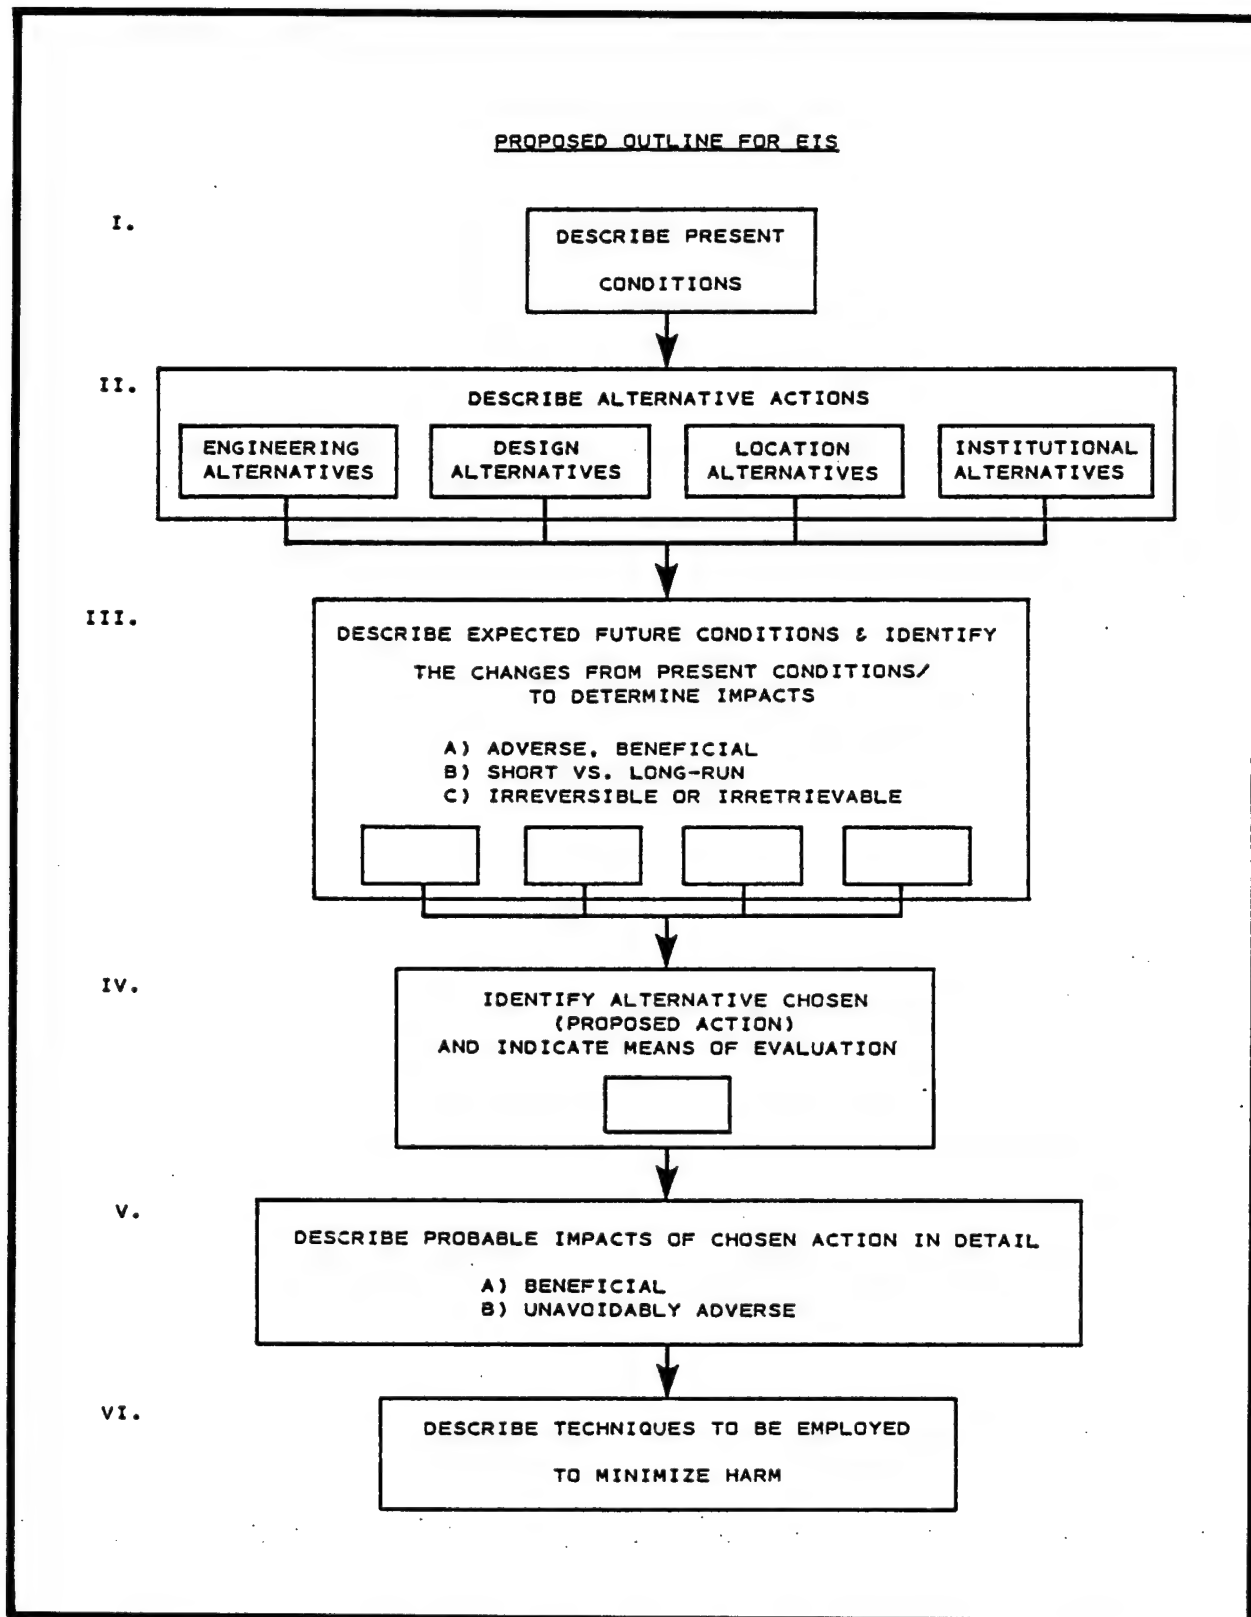

Figure I-1. Proposed Outline for Environmental Impact/
Statement/Report

data adequate to permit careful assessment of the characteristics of each alternative by commenting agencies is necessary. Where relevant, maps and/or photographs should be provided.

- Describe the probable impacts of each alternative - Requires a description of primary and secondary impacts, including beneficial and detrimental impacts on aesthetic, socioeconomic, and ecological systems; also requires a description of the environmental interrelationships in the direct project area and the total affected area. In particular, long-range impacts are to be evaluated regarding the extent to which actions taken now are decreasing sustained yield or carrying capacity of environmental components. Actions which cannot be withdrawn or reversed must also be specifically highlighted.
- Identify the alternative chosen, and indicate the evaluations which led to that choice - Requires a statement of the action to be proposed, including a more detailed development of its characteristics. This choice implies tradeoffs which must be considered both in terms of their relative values and the relationship of these values to particular constituencies.
- Describe the probable impacts of the proposed action in detail - Requires a more detailed description of probable effects, both beneficial and adverse. In particular, those adverse effects which will ensue even from the best

alternative, and which are therefore unavoidable in this context, should be highlighted. Evidence of compliance with local, state, and federal environmental control regulations should be provided.

- Describe the techniques for minimizing harm - Requires a description of actions taken to minimize harm, including techniques employed to curb air pollution, water pollution, noise, disturbance of economic and social patterns, and visual pollution. This description applies to both the construction and the operation of the facility.

APPENDIX J

CITY OF OXNARD RESOLUTIONS FOR CALCULATING
WASTEWATER CHARGES

RESOLUTION NO. 7424

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ADJUSTING FEES AND CHARGES FOR THE USE OF, AND FOR SERVICES RELATING TO, THE CITY WASTEWATER SYSTEM.

WHEREAS, the City Council of the City of Oxnard as adopted, Chapter 25 to the Code of the City of Oxnard to regulate wastewater discharges and other use of the City's wastewater system; and

WHEREAS, provision is therein made for fees and charges to be set and scheduled by councilmanic resolution; and

WHEREAS, pursuant to Chapter 25 of the Code of the City of Oxnard, Resolution 7070 was adopted to set such fees in accordance with the provisions of said Chapter 25, and

WHEREAS, the City intends to repeal said resolution and adopt a new resolution adopting new fees and charges for the use of and for services relating to the City wastewater system; and

WHEREAS, City of Oxnard Finance Department has prepared City of Oxnard Wastewater Rate recommendations for fiscal year 1978-79 dated June 1978 (Revised June 20, 1978), which report establishes the basis for the fees and charges set forth herein and which report is on file in the Office of the City Clerk of the City of Oxnard; and

WHEREAS, regulations of the Federal Environmental Protection Agency (EPA) and the California State Water Resources Control Board (SWRCB) "revenue program" guidelines dictate that the City's wastewater service charges conform to grant requirements; and

WHEREAS, the EPA and SWRCB revenue program guidelines require equitable charges for all users.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Oxnard that the following fees shall be charged and collected for the use of, and for other privileges and services relating to, the wastewater system of the City of Oxnard:

I. Monthly Service Charge for use.

A. City of Oxnard User Charge for Wastewater System Services

The rate for Oxnard user classes or individual users of the Wastewater system shall be calculated with the "City of Oxnard User Charge Formula" (hereinafter known as the Oxnard Formula) as follows:

$$OMUC = h(La) + j(OVd) + m(OBp) + n(OSp) + p(Vm) + q(Bm) + r(Sm) + C + Q$$

Where:

OMUC = Oxnard monthly User charge in dollars (\$)

La = area of wastewater users property in acres

OVd = maximum PSDWF in millions of gallons per day which has occurred for a billing period during the preceding 12 mo.

OBp = maximum BOD discharge in thousands of pounds per day which has occurred for a billing period during the preceding 12 mo.

OSp = maximum SS discharge in thousands of pounds per day which has occurred for a billing period during the preceding 12 mo.

Vm = monthly wastewater discharge in millions of gallons

Bm = monthly BOD discharge in thousands of pounds (k lbs)

Sm = monthly SS discharge in thousands of pounds (k lbs)

C = monthly cost per customer - \$1.32

Q = billing cost per bill in dollars - \$3.22

for individual user charge calculations or \$0.22 for

flat rate bills and for bills based on water use only

h, j, m, n, p, q and r are unit cost coefficients established as follows:

	<u>Effective 8-29-78</u>	<u>Effective 12-29-78</u>
h =	\$ 3.7327	\$ 3.7327
j =	3,077.1661	3,077.1661
m =	103.9969	103.9969
n =	191.4530	191.4530
p =	340.5436	442.3572
q =	36.9599	44.6698
r =	60.3766	75.5532

1. Formula Users (industrial & commercial)

The monthly user charge for formula users shall be calculated using the Oxnard Formula listed above. Industrial and commercial users billed by the Oxnard Formula method shall be those so designated by the Director of Public Works. For those Formula Users that do not provide metered wastewater flow data, the wastewater flow shall be assumed to be 90% of water consumed. For those users that provide engineering data acceptable to the Public Works Director showing a different percentage, the wastewater flows will be based on the data.

2. Non-Formula Users (industrial, commercial & governmental)

The monthly user charge for non-residential users of the system who are not classified as formula users by the Director of Public Works shall be as follows:

<u>Commercial Enterprise Category</u>	<u>Standard Discharge mg/l</u>		<u>Rate, Dollars per Ccf of Water Used</u>	
	<u>BOD</u>	<u>SS</u>	<u>Effective 8-29-78</u>	<u>Effective 12-29-78</u>
Restaurant	599.6	749.8	\$ 0.750	\$ 0.889
Commercial laundry excluding laundromats & excluding Mission Linen	443.5	240	0.532	0.614
Other	300	300	0.528	0.632

The minimum monthly commercial charge shall be the same as the residential charge for multiple dwelling units. These commercial rates are based on the expected flows and qualities of flows for each commercial discharger class using the Oxnard Formula. Individual commercial users whose discharges are materially different from those for their assigned class may be subject to charges and monitoring requirements incidental to using the Oxnard Formula. The rate per hundred cubic feet (Ccf) of water used is based on the assumption that 85 percent of the water consumed is returned to the wastewater system; and the director shall have the right to review the water consumption of any

metered user of the wastewater system, and to adjust the rate based on the average water consumption over a reasonable period of time.

3. Residential Users

Monthly residential user charges by type of dwelling units are as follows:

Single family unit. The monthly rate for each single family dwelling unit in a single building shall be \$8.21 effective 8-29-78 and \$9.93 effective 12-29-78 per dwelling unit. Provided, however, if a single family dwelling unit consumes less than 1000 cubic feet of City metered water during a bi-monthly billing period, the monthly service charge shall be the same as the rate charged for a multiple dwelling unit.

Multiple units-mobile home spaces. The monthly rate for each dwelling unit in a building containing two or more dwelling units, and for each mobile home space used, intended or designed for occupancy as a dwelling unit, shall be \$5.76 effective 8-29-78 and \$7.04 effective 12-29-78 per dwelling unit or mobile home space.

4. Non-metered water users

Except as provided in sub-section 3 for domestic water users, other non-metered water users, including commercial and industrial users, shall pay a monthly rate as determined by the director and based upon the monthly rate charged a metered water user of comparable size and character of use, provided, however, that the minimum monthly charge shall be the same as that charged for a multiple family dwelling unit.

5. Wastewater system rate for wastewater treated by another agency

Where wastewater is collected by the City and is accepted by another agency for transmission, treatment and disposal, the monthly wastewater system rates for the usage of such system shall be equal at least to the rate charged by such agency for transmission, treatment and disposal of such wastewater, anything to the contrary herein notwithstanding.

IV. Permit Fees (Oxnard Customers)

- A. Waste hauler's permit, annually, \$45.00
B. Industrial waste discharge permit.

(to offset cost of monitoring by City)

	<u>FREQUENCY OF MONITORING</u>	<u>ANNUAL PERMIT FEE</u>
<u>Class I</u>		
Hospitals Commercial Establishments Restaurants, Hotels, Recreational	Semi-Annually	\$50/yr.
<u>Class II</u>		
Electronic & Electrical Parts Mgr. Machine Shops Metal Fabrications Beverage Bottling Textile Mgr. Ceramic Mgr. General Mgr. not otherwise Classified	Quarterly	\$80/yr.
<u>Class III</u>		
Plastic Mgr. & Fabrication Paint Mgr. Commercial Laundries Petroleum Production Metal Plating Dairy Products Bakeries	Monthly	\$130/yr.
<u>Class IV</u>		
Canneries Food Processing Chemical Mgr. Distilleries Citrus by-products Paper Mgr. Tannery Rubber Products Petroleum Refineries	Monthly	\$270/yr.

V. Fee for Appeal

For each appeal to City Council from director's ruling for consideration, a fee of \$50 will be charged.

BE IT FURTHER RESOLVED that the fees hereinabove provided shall be effective and shall be applied as follows:

- A. Effective dates. The monthly service charge for use of the City wastewater system, additional charges for outside City service, inside City service to non-metered water users, wastewater acceptance by another agency, and unusual wastewater, permit fees and fees for appeal

shall be effective August 29, 1978, or as specified herein if different effective dates are specified.

B. Permits. The permits specified in Section IV shall be granted and renewed on an annual basis effective January first of each year. Application for permit and permit renewal shall be made in accordance with Section 25-25 and in accordance with regulations of the director promulgated to implement the section. Permit fees may be pro-rated by the director of permit periods of less than one calendar year, provided that all or part of a calendar quarter shall be considered as a full quarter.

C. Billing procedure for monthly service charge for use of City Wastewater system. Bills shall be computed according to the rates in effect and the number of days in the service period at each rate.

-BE-IT FURTHER RESOLVED THAT the provisions of resolution 7070 except those that relate to Regional Wastewater Treatment and Disposal Facility user charges and billing procedures, are repealed upon the effective date of this resolution.

Passed and adopted this 29th day of August 1978, by the following vote:

AYES: Councilmen Kato, Lopez, Maxwell, Miller, Takasugi.
NOES: None.
ABSENT: None.

RESOLUTION NO. 7683

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ADJUSTING FEES AND CHARGES FOR THE USE OF, AND FOR SERVICES RELATING TO, THE CITY WASTEWATER SYSTEM FOR FORMULA USERS.

WHEREAS, the City Council of the City of Oxnard as adopted, Chapter 25 to the Code of the City of Oxnard to regulate wastewater discharges and other use of the City's wastewater system; and

WHEREAS, provision is therein made for fees and charges to be set and scheduled by councilmanic resolution; and

WHEREAS, pursuant to Chapter 25 of the Code of the City of Oxnard, Resolution 7424 was adopted to set such fees in accordance with the provisions of said Chapter 25, and

WHEREAS, the City intends to repeal the portion of the said resolution referring to formula users and adopt a new resolution adopting new fees and charges for formula customers use of and for services relating to the City wastewater system; and

WHEREAS, the City of Oxnard Finance Department has prepared City of Oxnard Wastewater Rate recommendations for fiscal year 1979-80 dated June 1979, which report establishes the basis for the fees and charges set forth herein and which report is on file in the Office of the City Clerk of the City of Oxnard; and

WHEREAS, regulations of the Federal Environmental Protection Agency (EPA) and the California State Water Resources Control Board (SWRCB) "revenue program" guidelines dictate that the City's wastewater service charges conform to grant requirements; and

WHEREAS, the EPA and SWRCB revenue program guidelines require equitable charges for all users.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Oxnard that the following fees shall be charged and collected for the use of, and for other privileges and services relating to, the wastewater system of the City of Oxnard:

I. Monthly Service Charge for use.

A. City of Oxnard User Charge for Wastewater System Services

The rate for Oxnard user classes or individual users of the Wastewater system shall be calculated with the "City of Oxnard User Charge Formula" (hereinafter known as the Oxnard Formula) as follows:

$$OMUC = h(La) + j(OVd) + m(OBp) + n(OSp) + p(Vm) \\ q(Bm) + r(Sm) + C + Q$$

Where:

OMUC = Oxnard monthly User charge in dollars (\$)

La = area of wastewater users property in acres

OVd = maximum PSDWF in millions of gallons per day which
has occurred for a billing period during the preceding
12 mos.

OBp = maximum BOD discharge in thousands of pounds per day
which has occurred for a billing period during the
preceding 12 mos.

OSp = maximum SS discharge in thousands of pounds per day
which has occurred for a billing period during the
preceding 12 mos.

Vm = monthly wastewater discharge in millions of gallons

Bm = monthly BOD discharge in thousands of pounds (k lbs)

Sm = monthly SS discharge in thousands of pounds (k lbs)

C = monthly cost per customer - \$1.32

Q = billing cost per bill in dollars - \$3.40 for
individual user charge calculations or \$0.40 for
flat rate bills and for bills based on water use only.

h, j, m, n, p, q and r are unit cost coefficients established
as follows:

Effective 06-30-79

h = \$ 2.8090

j = 839.6772

m = 203.3205

n = 290.7599

p = 442.3572

q = 58.5570

r = 95.4590

Formula Users (industrial & commercial)

The monthly user charge for formula users shall be calculated using the Oxnard Formula listed above. Industrial and commercial users billed by the Oxnard Formula method shall be those so designated by the Director of Public Works. For those Formula Users that do not provide metered wastewater flow data, the wastewater flow shall be assumed to be 90% of water consumed. For those users that provide engineering data acceptable to the Public Works Director showing a different percentage, the wastewater flows will be based on the data.

Billing procedure for monthly service charge for use of City Wastewater system. Bills shall be computed according to the rates in effect and the number of days in the service period at each rate.

BE IT FURTHER RESOLVED THAT the provisions of resolution 7424 that relate to Formula Users (industrial and commercial) be repealed upon the effective date of this resolution.

RESOLUTION NO. 7684

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF OXNARD ADJUSTING FEES AND CHARGES FOR THE USE OF, AND FOR SERVICES RELATING TO, THE CITY REGIONAL WASTEWATER SYSTEM.

WHEREAS, the City Council of the City of Oxnard has adopted Chapter 25 to the Code of the City of Oxnard to regulate wastewater discharges and other use of the City's wastewater system; and

WHEREAS, provision is therein made for fees and charges to be set and scheduled by councilmanic resolution; and

WHEREAS, pursuant to Chapter 25 of the Code of the City of Oxnard, Resolution 7423 was adopted to set such fees in accordance with the provisions of said Chapter 25; and

WHEREAS, the City intends to repeal said resolution and adopt new resolution adopting new fees and charges for the use of and for services relating to the City wastewater system; and

WHEREAS, City of Oxnard Finance Department has prepared Regional Wastewater Rate recommendations for fiscal year 1979-80 dated June 1979 which report establishes the basis for the fees and charges set forth herein and which report is on file in the office of the City Clerk of the City of Oxnard; and

WHEREAS, regulations of the Federal Environmental Protection Agency (EPA) and the California State Water Resources Control Board (SWRCB) "revenue program" guidelines dictate that the City's wastewater service charges conform to grant requirements; and

WHEREAS, the City has agreed to and has established a Regional Treatment & Disposal Facility to provide Wastewater Treatment and Disposal Services to users of the City, the City of Port Huéneme, the Naval Construction Battalion Center (CBC) and the Naval Pacific Missile Test Center (PMTIC); and

WHEREAS, the EPA and SWRCB revenue program guidelines require equitable charges for all users.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Oxnard that the following fees shall be charged and collected for the use of, and for other privileges and services relating to, the Regional Wastewater Treatment System of the City of Oxnard:

I. Monthly Service Charge for use.

A. Regional Treatment & Disposal Facility User Charge

The rate for regional users (Oxnard, Port Hueneme, CEC, and PMTC) of this facility shall be calculated with the

"Regional User Charge Formula" as follows:

$$\begin{aligned} \text{RMUC} = & a (\text{Vw}) + b (\text{RVd}) + c (\text{RBp}) \\ & + d (\text{RSp}) + e (\text{Vm}) + f (\text{Bm}) \\ & + g (\text{Sm}) + K \end{aligned}$$

Where:

RMUC = regional monthly user charge in dollars (\$)

Vw = contracted for Peak Wet Weather Flow (PWWF)
capacity in million gallons per day (mgd)

RVd = contracted for Peak Seasonal Dry Weather Flow
(PSDWF) capacity in million gallons per day (mgd)

RBp = contracted for Biochemical Oxygen Demand (BOD)
capacity in thousand pounds per day

RSp = contracted for Suspended Solids (SS) capacity in
thousand pounds per day (k lbs/day)

Vm = monthly wastewater discharge in millions of gallons

Bm = monthly BOD discharge in thousands of pounds (k lbs)

Sm = monthly SS discharge in thousands of pounds (k lbs)

K = billing cost - currently \$3.00

a, b, c, d, e, f, and g are unit cost coefficients
established as follows:

Effective 06-30-79

a = \$ 15.0333

b = 10.4957

c = 6.972

d = 10.1072

e = 307.9365

f = 36.6701

g = 66.9376

B. Billing procedure for monthly service charge for use of Regional Wastewater Treatment System. Bills rendered for service periods beginning on or after the effective dates of rate increases specified herein shall be at the rates specified.

BE IT FURTHER RESOLVED THAT the provisions of Resolution 7423 that relate to Regional Treatment and Disposal Facility user charges and billing procedures are repealed upon the effective date of this Resolution.
